

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

A DESCRIPTIVE AND STATISTICAL  
ACCOUNT  
OF  
THE BRITISH EMPIRE.

---

PART III.

INDUSTRY OF THE UNITED KINGDOM.

CHAPTER V.—COMMERCE.

SECT. I.—*General Remarks on Commerce.*

THE commerce of Great Britain has, for a lengthened period, formed one of the principal sources of her wealth and power; and no account of the state and resources of the empire can have any pretensions to completeness in which it does not occupy a very prominent place.

*Mode in which Commerce contributes to increase Wealth—Means by which it may be promoted.*—Strictly speaking it is, perhaps, improper in such a work as this to say anything on topics of this sort; but so much misconception is entertained in regard to the mode in which commerce contributes to increase wealth, and the means by which it may be promoted, that we hope to be excused for submitting a few observations upon these points. No one doubts that they are of the greatest importance.

The influence of commerce upon national wealth is only indirect. Those engaged in commercial undertakings make no change in the articles they buy and sell: they merely barter one sort of produce for another; and, generally speaking, what is given is the exact equivalent of what is got. The advantage of the exchange—and it is not easy to overrate its importance—consists in its enabling those who produce the commodities or articles that form the subject-matter of commerce to carry on their business without interruption. The intervention of merchants and dealers gives a continuous motion to the plough and the loom. They collect and distribute all sorts of commodities; they buy of the farmers and manufacturers the things they have to sell; and bringing together every variety of useful and desirable articles in shops and warehouses, individuals are able, without difficulty or loss of time,

to supply themselves with whatever they want. Were the class of dealers annihilated, that division of labour in agriculture and manufactures to which they are indebted for most part of their progress would be wholly destroyed. The moment an individual had produced a quantity of wheat, of cloth, or of shoes, he would be obliged to abandon his peculiar occupation, and to endeavour, first to dispose of his produce, and next, to find out the various individuals possessed of, and willing to part with, the different articles required for his consumption. Under such circumstances, it would not be possible to confine ourselves to one employment, and every family would be obliged to undertake the manufacture of most things required for its support. All the advantages of co-operation and combination would be lost; society would be thrown back into primeval barbarism, and would not possess a tenth part of the accommodations that are now enjoyed.

But this is not all. Besides enabling individuals to addict themselves, in preference, to such employments as suit their tastes or capacities, and to prosecute them without interruption, commerce gives birth to a *territorial* division of labour. Different countries, and different provinces of the same country, differ in situation, soil, climate, and productions: some are admirably fitted for producing corn and wool, but are without wine and silk; some have rich mines, while their cultivated lands are poor and scanty; some are overrun by forests, while others can hardly boast of a solitary tree: nor is there, in point of fact, a single country, however rich in native products, that would not, if confined to its own resources, be destitute of many articles indispensable to a comfortable existence. But, by the establishment of a free commercial intercourse, what is deficient in one district is balanced by what is superfluous in another; and an industrious nation enjoys whatever is useful, rare, or valuable in all the countries and climates of the world. As soon as a commercial intercourse grows up, each people endeavours to avail itself of its peculiar means of production. Capital and industry are diverted, in preference, to those employments in which the physical circumstances of particular countries, or the genius of their inhabitants, especially fit them to excel; while by exchanging such portions of their peculiar produce as exceed their own consumption for the peculiar articles raised by others, each is supplied with all that is elsewhere obtainable; at the same time that the productive powers are stimulated to the utmost, and that the wealth of the world is immeasurably increased. It is thus, that by distributing the various articles suitable for the comfort and accommodation of man in different and distant regions, Providence has provided for their mutual dependence, and made the selfish pursuits of individuals and nations subservient to the general good.

Brief as this statement is, it is sufficient to demonstrate the impolicy of all attempts to promote commerce or industry by enactments intended to force capital into channels into which it would not naturally flow. Such regulations universally proceed on mistaken principles, and are sure to be pernicious. They disturb that distribution of labour which is most consonant to the order of nature, and limit that division of employments among different individuals and countries of which every fresh extension is sure to be advantageous. Those who maintain the policy

of endeavouring, by means of legislative enactments, to give a more profitable direction to national industry than it would naturally take, assume that governments know better than their subjects what is best calculated to promote the interests of the latter. But any such assumption would be in the highest degree preposterous and absurd. "The statesman," says Dr. Smith, "who should attempt to direct private people in what manner they ought to employ their capitals, would not only load himself with a most unnecessary attention, but assume an authority which could safely be trusted not only to no single person, but to no council or senate whatever, and which would nowhere be so dangerous as in the hands of a man who had folly and presumption enough to fancy himself fit to exercise it."—(*Wealth of Nations*, p. 200.)

The conduct of individuals in matters of this sort may always be safely left to be determined by their own prudence and sagacity. We have the very best security—the plain and obvious interest of the parties—that they will, speaking generally, do that which is most for their own advantage, and, consequently, for that of the state of which they are subjects. Hence the policy of leaving them, in all cases, to pursue their own interest in their own way, and of interfering only when they attempt unjustly to encroach upon each other. Freedom and security are all that is necessary to stimulate industry and invention, and to insure the most rapid advancement in the career of improvement.

When a restriction is laid on the importation of any description of commodities previously brought from abroad, their price suddenly rises, and the home producers get an advantage; but what they gain in this way is plainly at the expense of their fellow-citizens, and is, besides, of trifling importance. For additional capital being drawn to the business, prices are very soon reduced to the level that barely affords the ordinary rate of profit. Now, it is just possible that this level may be identical with that at which prices stood previously to the restriction; but the probability is, that it will be considerably higher. If the former should happen to be the case, little, though something, will have been lost, but nothing whatever will have been gained by the restriction. By ceasing to import from the foreigner, we must also cease exporting to him; for the exports are, in all cases, merely the equivalents of the imports. All, therefore, that will have been accomplished by this measure will be the transference of capital from one employment to another. That equality of protection to which all individuals are justly entitled will have been encroached upon; the increase of one business will have been brought about by the depression of some other that was equally advantageous; but no addition will have been made to the capital of the country, or to the facilities for employing that capital with security and advantage.

But in the vast majority of cases the price of an article imported from abroad is not the same after its importation is prohibited, but is permanently raised; for if we could previously have produced it as cheaply as foreigners, it would not have been imported. Instead of being obtainable, as before, for 1,000,000*l.*, the article will henceforth cost perhaps 1,200,000*l.*, or 1,500,000*l.* And it is obvious that the effect of this artificial increase of price on the consumers of the article is precisely the same as if, supposing the trade to have continued free,

a peculiar tax of 200,000*l.* or 500,000*l.* a-year had been laid on them. But it will be observed that, had such a tax been imposed, its produce would have come into the hands of government, and would have formed a portion of the national income; whereas the increased cost of the article is, under the circumstances supposed, occasioned by an *increased difficulty of production*, and is, therefore, of no advantage to any one.

It consequently results that, even in those rare cases in which a restrictive regulation has no tendency to raise prices, it is hurtful, by changing the natural distribution of capital, and lessening the foreign demand for the produce of industry to the same extent that it increases the home demand. But in that incomparably more numerous class of cases in which a restriction occasions a rise in the price of the article which it affects, it is infinitely more injurious. Besides the mischief arising from varying the natural distribution of capital, and circumscribing the foreign trade of the country, such restriction imposes a heavy burden on the people, for no purpose of general or public utility, but to produce a certain and grievous injury, by tempting individuals to withdraw from really advantageous businesses to engage in those that cannot be prosecuted without great national loss, and which must be abandoned the moment the prohibition ceases to be enforced.

“The natural advantages which one country has over another in producing particular commodities, are sometimes so great, that it is acknowledged by all the world to be in vain to struggle with them. By means of glasses, hot-beds, and hot-walls, very good grapes can be raised in Scotland, and very good wine too can be made of them, at about thirty times the expense for which, at least, equally good can be brought from foreign countries. Would it be a reasonable law to prohibit the importation of all foreign wines, merely to encourage the making of claret and burgundy in Scotland? But if there would be a manifest absurdity in turning towards any employment thirty times more of the capital and industry of the country than would be necessary to purchase from foreign countries an equal quantity of the commodities wanted, there must be an absurdity, though not altogether so glaring, yet exactly of the same kind, in turning towards any such employment a thirtieth, or even a three hundredth part more of either. Whether the advantages which one country has over another be natural or acquired, is, in this respect, of no consequence. As long as the one country has those advantages, and the other wants them, it will always be more advantageous for the latter nation to buy of the former than to make. It is an acquired advantage only which one artificer has over his neighbour who exercises another trade; and yet they both find it more advantageous to buy of one another than to make what does not belong to their particular trades.”—(*Wealth of Nations*, p. 201.)

These observations will probably suffice to give the reader an idea of the way in which commerce contributes to increase wealth, and of the policy that ought to be pursued with respect to it. Those who wish for further information on these points may consult the *Wealth of Nations*, the articles on COMMERCE, &c., in the *Commercial Dictionary*, and such like works.

It is usual, in treating of commerce, to distribute the details under the heads of home and foreign trade. It is not possible, indeed, always

to separate what belongs to the one from what belongs to the other ; but the distinction may, notwithstanding, be made with sufficient accuracy for practical purposes.

1. *Home Trade*.—By this is understood the commercial transactions carried on by individuals of the same country with each other. In countries like France, where *octrois* are established, a kind of rough estimate may be formed of the extent of these transactions ; but in such a country as England, where, with but few exceptions, no account is taken of any article brought to market, there are no means whatever of estimating the amount of this trade : it is obvious, however, that it must be very great. Articles of provision and clothing are of course the most prominent ; but coal, and various articles for building and manufacture, are also very important.

There can be no question that the number and importance of the engagements annually entered into with each other by the inhabitants of all rich and populous countries very far exceed the number and importance of those they enter into with foreigners. But it does not, therefore, necessarily follow, as is commonly supposed, that the home trade is more beneficial than the foreign trade. Commerce, it must be kept in mind, is not directly productive ; and, in estimating the comparative advantageousness of the traffic we carry on among ourselves and that which we carry on with others, it will not do to look merely at the magnitude and number of the transactions in each. The real question is, which occasions the greatest subdivision of employments, and gives the most powerful spur to industry ? This, however, is a question that does not, perhaps, admit of any very satisfactory solution. Without some species of home trade, no division of employments could ever have been made, and man must have continued in ignorance and barbarism. And it may, therefore, be truly said, that the home trade is the most indispensable to the rise and early progress of the arts. But those who consider the influence of foreign commerce in making man acquainted with an infinity of useful and desirable products of which he must otherwise have been ignorant,—in diverting the industry of every country into the most profitable channels,—in improving every process carried on at home, by opening the markets of the world to its produce,—and in exciting the desires, and stimulating the industry and invention of all classes, will not hesitate to admit that it has principally contributed to advance society to the high state of improvement to which it has attained.

At no very distant period, various restraints were imposed on several branches of the home trade. Of these the most important seem to have been laid on the dealers in corn. The practices termed *engrossing*, or the buying up of quantities of corn and other victual, in the view of selling them at some future period ; *forestalling*, or the buying of or contracting for corn or other victual on its way to market ; and *regrating*, or the selling of corn or other victual in the same market in which it had been bought, were all forbidden under severe penalties. But the pernicious effects of such interference at length became obvious ; and the statutes against forestalling, &c., after being materially modified in the reign of Charles II., were finally repealed in 1772.

It was not unusual, under the princes of the Tudor line, for the crown to grant monopolies to some one individual or set of individuals, conveying to him or them the sole right to make, buy, sell, export, or import some commodity or class of commodities. This abuse was carried to a very great height in the reign of Elizabeth. The grievance became at length so insupportable that, notwithstanding the opposition of government, which looked upon the power of granting monopolies as a very valuable part of the prerogative, they were abolished in 1624 by the famous Act, 21 James I., cap. 3. This Act declares that all monopolies, grants, and letters-patent, for the sole buying, selling and making of goods and manufactures, not given by Act of Parliament, shall be null and void. It excepts patents for fourteen years for the sole working or making of any new manufactures within the realm, and for the true and first inventors of such manufactures, provided they be not contrary to law, nor mischievous to the state. It also excepts grants by Act of Parliament to corporations, companies, &c.

This Act effectually secured the freedom of internal industry, and has contributed more than any other in the statute book to accelerate the progress of improvement. From the period when it was passed down to the present moment, every branch of industry carried on at home has, with a few trifling exceptions (principally originating in corporation privileges), been conducted under a system of free competition. All individuals have been at liberty to employ themselves in whatever way they judged most conducive to their interests; and invention has been constantly on the rack to find out new methods of production, and to improve and perfect the old. The whole country has been subjected to the same equal law; and individuals and commodities have been permitted to pass, without let or hindrance of any sort, from one province or district to another. The restrictions that have been imposed on several branches of our trade with other countries have obliged us to pay an enhanced price for different foreign products, and subjected us to various inconveniences; but nothing of the sort has been experienced at home. The natural order of things has been less disturbed in Great Britain than in any other country; and we have been supplied with all sorts of native commodities and accommodations at the lowest price that would suffice to indemnify those who brought them to market.

This freedom of internal industry has been one of the principal causes of our more rapid progress in manufacturing and commercial industry. Those who compare the internal policy of Britain in this respect with that of France, Spain, or Germany, where each province had a separate revenue system, and was in the habit of surrounding its frontiers with a cordon of troops to shut out the cheaper products of its fellow-subjects, will be satisfied that it is not easy to exaggerate the advantages we owe to this more liberal system.

2. *Foreign Trade.*—The foreign trade of England was long confined within the narrowest limits, and gave no earnest of the extraordinary progress it was subsequently destined to make. For some centuries after the Norman invasion, the energies of the country were wasted on wild efforts to conquer France. After our expulsion from

that country had put an end to this Quixotic attempt, a contest began between the rival houses of York and Lancaster; and, for the protracted period of about forty years, the kingdom was a prey to all the horrors of civil war. The accession of Henry VII. restored tranquillity; and the judicious and vigorous measures of that monarch for repressing the turbulence of the great barons, and securing the ascendancy of the law, were productive of the best effects. But all ranks and orders of people had suffered too much from previous disorders to think of engaging, on the return of tranquillity, in schemes of foreign commerce. Public attention in the reign of Henry VIII., Edward VI., and Mary, was almost wholly engrossed by religious disputes. Some attempts were, indeed, made to explore foreign countries, but, in the first instance at least, they led to no very striking practical results. It was not till the reign of Elizabeth that the taste of the nation for naval enterprise and foreign commerce was fully awakened. It was then that the flag of England began to wave over every sea; and that English merchants and English products began to be met with in the most distant markets. The foundation in the ensuing reign of the colonies of America gave a powerful stimulus to commerce; which was still farther promoted by the free and liberal institutions established at the Revolution. Nothing, however, has had so powerful an influence in extending our trade as the astonishing progress that has been made in the cotton manufacture. Previously to 1770, the exports of cotton goods were so very insignificant as to be hardly worth notice; whereas they amounted in 1845 to the prodigious sum of 26,119,331*l.* (real value), being nearly equal to all the other articles of export produced or manufactured at home!

It was the practice in most modern states, after the revival of commerce in the fifteenth, sixteenth, and seventeenth centuries, to assign such branches of trade as were reckoned peculiarly hazardous, or which were carried on with barbarous nations, to the exclusive management of regulated or joint stock companies. The trade with India is a striking example of this. It was supposed that it could not be safely carried on without the employment of armed ships, and the possession of factories, or fortified *dépôts*, in India, where the adventurers and their products might be secure from the hostility of the natives. The trade with Africa, the Levant, and some other uncivilized countries, was supposed to require similar protection. And as most governments had not, in the ages referred to, ships and troops to spare for the defence of their subjects in remote regions, the traders were formed into companies, and were authorized to levy duties, and to provide for their common defence and security. Hence the origin of the Dutch, French, and English East India Companies, and of a host of other establishments of the same kind. But the necessity for these companies, if it ever really existed, which is questionable, ceased long ago, when the states to which they belonged became sufficiently powerful to protect their subjects in all parts of the world. When this change took place, the different companies should have been abolished; and the trade thrown open to that individual competition without which it never can make any considerable progress. But the private interests of the companies were opposed to any such measure; and

succeeded, through their influence with their respective governments, in preserving their monopolies for a lengthened period. Thus the trade between England and all the vast countries to the eastward of the Cape of Good Hope was monopolised by the East India Company till 1814, when private individuals were allowed to trade with India, and the countries to the west of Malacca; the trade with China, and the other countries to the east of the Straits, being reserved to the Company. But this also was opened in 1834 to public competition, and the last vestige of the old monopoly system effaced from the statute book! At present, therefore, all British subjects are at liberty to trade with all friendly countries, on their conforming to the regulations laid down by such countries, and to our customs' laws.

With the exception of coal, all other articles may be exported free. But the duties on imports are of the greatest importance. They have been imposed partly, and principally, in the view of raising a revenue, and, as such, will come under our notice in a subsequent part of this work. They have partly, however, been intended to protect or promote some native employment or department of industry. But, recently, the greater number of the duties imposed in this view have either been repealed or very materially modified; and the fair presumption is, that, in no long time, they will entirely disappear. It is obvious, indeed, that to whatever extent we hinder, either by oppressive duties or otherwise, the importation of foreign produce, we hinder at the same time, and by the same act, the exportation, and consequently, also, the production of an equivalent amount of British produce. We may confer, by a proceeding of this sort, a trifling advantage on a particular class; but it is obvious that what is gained by them must be made at the expense of some other class, whose business, from its being naturally adapted to the country, is sure to be more profitable. It is a contradiction, and an absurdity, to pretend that the wealth of any people can be increased by such means. The British nation has had the honour to be the first to admit this principle, and to renounce the selfish and shallow policy of monopoly. And the extension of our trade, and the influence which our example cannot fail to have in France, the United States, &c., will, there is little doubt, verify the anticipations of those who contended that, by adopting a liberal commercial system, we should not only secure for ourselves a great immediate advantage, but would induce other states to abandon their prohibitions, and to trade with us on a liberal footing.

Of the restrictions on our foreign trade, those on the importation of corn have long been the most important. But by the Act of this year, the 9 and 10 Vict., c. 22, these restrictions are to terminate on the 1st February, 1849, when the trade in corn becomes quite free.

The laws restricting the importation of corn have occasioned a vast deal of discussion and inquiry. From 1828 down to the present time, the duties on importation have been variable, increasing as the home price fell, and diminishing as it rose. Owing to the comparative density of our population, we have been accustomed, except in unusually favourable years, to import some portion of our supplies of corn; and the duty, by restricting this importation, tended to keep up the price of corn in scarce years, and in those in which the crop did not exceed an average. But, by doing this, it rendered ex-

portation in favourable years, or when the crops were unusually abundant, impossible without a considerable fall of price. In point of fact, therefore, the duty has been injurious both to the agriculturists and the other classes; to the latter, because of the obstacles it threw in the way of importation in scarce years; and to the former, because of its hindering exportation when the home crops exceeded an average. The mode, too, in which the duties were imposed added materially to the great risk naturally inherent in the corn trade. Had they been constant, a fall of price would have been the only danger to which the importing merchant would have been exposed; whereas an importer, under the late system, was not only exposed to loss by that fall, but by the rise that at the same time took place in the duty.

It is true that a vast deal of exaggeration has been indulged in on the subject of the corn laws, and that their mischievous influence has been very greatly overrated. But that they have been most injurious, especially in unfavourable seasons, is a fact of which there can be no manner of doubt. Owing, however, to the wonderful improvements made in agriculture during the last 20 years, the influence of the corn laws has progressively diminished by the greater abundance and cheapness of our home supplies; so that, as previously seen, no serious inconvenience to the agriculturists needs now be anticipated from their total repeal.

Several of the writers on economical subjects that preceded Adam Smith, had established and illustrated with more or less success some of the leading principles of a sound commercial system. But he was the first by whom the whole subject was treated in its fullest extent, and by whom these principles were established beyond the reach of cavil and dispute. Smith has shown, with a force of reasoning and an amplitude of illustration that leaves little to be desired, that the mercantile or protective system is at once inconsistent and absurd; and that every regulation intended to divert industry into particular channels, or to determine the species of intercourse to be carried on between different parts of the same country, or between distant and independent countries, is impolitic and pernicious, subversive of the rights of individuals, and adverse to the progress of real opulence and lasting prosperity.

Considering, however, the universal ascendancy of the protective system, and the specious reasonings that have been and may be alleged in its support, it will excite no surprise that the new doctrines with regard to the advantage of a free intercourse with foreigners, should have made their way slowly and with difficulty. But a sound theory when once fully established and fairly brought before the public, seldom fails in the end to triumph over all opposition. The principles developed by Smith were adopted and enforced by all subsequent writers of any influence or authority, and by most leading statesmen. At first, indeed, the latter generally contented themselves with expressing their concurrence in the doctrines, and their regret that the artificial system on which we had long acted made it impossible to apply them practically. But the fallacy of such statements was speedily shown; and after the close of the revolutionary war, and, more especially under the auspices of Mr. Huskisson, a very great

progress was made in the introduction of a more liberal commercial system. Several prohibitions of importation were repealed and various oppressive duties were materially reduced. The benefits resulting from these changes, and the more general diffusion of information on such subjects, paved the way for still further changes, and for that great measure that will for ever distinguish the administration of Sir Robert Peel.

After making very important changes in the corn laws and in the tariff in 1842, Sir Robert Peel made still further and more comprehensive changes in 1845. In the course of the latter year he abolished the customs' duties on about 420 articles, many of which were of very considerable importance. The measures then adopted were equivalent, in fact, to the virtual abandonment of the principle of protection. The shreds and patches of it which still remained might, however, have preserved their place on the statute book for some time longer had not the unsatisfactory corn-harvest and the partial failure of the potato crop in 1845 made it necessary to adopt measures for averting the threatened deficiency in the supply of food. Under such circumstances, the temporary suspension of the corn laws could hardly have been avoided. But if once suspended, their re-enactment would have been all but impossible; and it was infinitely better, by providing at once for their repeal to make an end of the system and of the dissatisfaction and agitation to which it had given birth, than to endeavour to prolong its existence in any modified shape. Such was the view of the matter taken by Sir Robert Peel; and he fortunately succeeded, despite difficulties that none else could have overcome, and at the cost of greater personal sacrifices than have ever been made by any other minister, in carrying an Act for the immediate modification of the corn laws and for their abolition at the end of three years! This great measure has been accompanied by still further improvements in the tariff, more especially as respects sugar; so that the principle of the perfect freedom of trade may now be considered as finally adopted, and all but fully carried out, in our commercial policy.

#### SECT. 2.—*Trade with different Countries.*

Many of the remarks and statements that might have been introduced under this head have been anticipated in the preceding chapter. Subjoined to the notices of those manufactures of which any considerable portion is exported, such as cotton, woollen, linen, hardware, &c., are accounts of the quantity and value thereof exported in different years, specifying the countries to which the exports were made, and the quantities and values of the different articles sent to each. Some of these articles also contain accounts of the foreign sources whence the raw material, used wholly or partly in some of our principal manufactures, has been derived, &c. The following remarks and tables will, therefore, be in some measure supplementary only to those now referred to; a circumstance which must be kept in view by the reader of this chapter.

*Trade with Ireland.*—Exclusive of the coasting trade carried on between different ports of Great Britain, there is a very extensive coasting, or cross channel trade, carried on between Great Britain

and Ireland. With the exception of linens, almost all the manufactured articles made use of in Ireland are imported from Great Britain; as is by far the largest part of the tea, sugar, wine, and other foreign articles required for her consumption. In return she sends to us, exclusive of linens, large quantities of corn, flour, and meal, live cattle and pigs, barrelled beef and pork, butter, lard, &c. There are no means, however, for determining the exact amount of this trade, no official accounts having been kept of the quantity or value of the articles passing between the two countries since 1825, with the exception of the corn brought from Ireland into Great Britain. The latter, including flour and meal, amounts annually to about 3,000,000 quarters (see vol. i., p. 572). Subjoined is an—

*Account of the Quantities of the various Articles Exported from Ireland during the Years 1801, 1805, 1809, 1813, 1817, 1821, and 1825, exhibiting the respective Official Values of the Exports to Great Britain and to Foreign Parts.*

| Articles being the Produce or Manufactures of the United Kingdom.                                                              | 1801         | 1805         | 1809         | 1813         | 1817         | 1821         | 1825         |
|--------------------------------------------------------------------------------------------------------------------------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|
| TO ALL PARTS.                                                                                                                  |              |              |              |              |              |              |              |
| Corn and meal, viz. :—                                                                                                         |              |              |              |              |              |              |              |
| Barley . . . . qrs.                                                                                                            | ..           | 17,320       | 26,598       | 184,168      | 39,114       | 78,220       | 154,322      |
| Oats . . . . .                                                                                                                 | 129          | 225,324      | 823,438      | 802,289      | 646,056      | 1,129,284    | 1,305,204    |
| Wheat . . . . .                                                                                                                | ..           | 62,815       | 83,509       | 201,273      | 37,380       | 476,940      | 293,540      |
| Other grain . . . .                                                                                                            | 1            | 5,302        | 8,025        | 5,604        | 2,011        | 7,807        | 23,632       |
| Wheat flour . . . cwt.                                                                                                         | 303          | 22,774       | 18,007       | 207,394      | 34,517       | 225,005      | 204,507      |
| Oatmeal, &c. . . .                                                                                                             | 2,524        | 34,297       | 50,349       | 109,347      | 84,863       | 66,063       | 204,617      |

The inconsiderable amount of the trade of Ireland with all places except Great Britain, is seen from this table, and will be further evinced afterwards. Liverpool being the grand seat of the trade between this country and Ireland, we subjoin a statement, compiled with the greatest care by the best authorities, exhibiting a view of the quantities and values of the leading articles of Irish produce imported into Liverpool.

*Account of the Quantities, Prices, and Values of the following Articles of Irish Produce imported into Liverpool during each of the Seven Years ending with December, 1844.*

*Annual Values of the Total Irish Produce imported into Liverpool during Seven Years, as follows:—*

| 1838      | 1839      | 1840      | 1841      | 1842      | 1843      | 1844      |
|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| £.        | £.        | £.        | £.        | £.        | £.        | £.        |
| 5,559,047 | 5,078,890 | 4,334,164 | 4,499,188 | 3,649,428 | 4,534,578 | 4,618,957 |

About 500,000*l.* a-year may be added to the total sums in the above table for the years 1838, 1839, 1840, 1841, and 1842, and 700,000*l.* for the years 1843 and 1844, for cottons and linens, eggs, salmon, &c., of which no accurate account can be had. In 1844 these values are believed to have been nearly as follows, viz.: cottons and linens 400,000*l.*; eggs and poultry 120,000*l.*; salmon, 40,000*l.*; other fish, including oysters, 30,000*l.*; hides, hair, feathers, minerals, porter, &c., 110,000*l.*, making in all 700,000*l.*

In addition to the above, Irish grain of the value of 162,620*l.* was imported, in 1844, into Runcorn, at the mouth of the Duke of Bridgewater's Canal, direct from Ireland. A good deal of the wool that was formerly exported from Ireland to Liverpool, and thence to the Continent, is now shipped direct for the latter.

The trade between Ireland and all the other ports of Great Britain does not amount to half her trade with Liverpool.

It is quite impossible to form any estimate either of the quantity or value of most articles carried coastwise from port to port in Great Britain. The conveyance of coal from the Tyne, the Wear, and the Tees to the metropolis, and other towns in the southern counties, forms an important branch of the coasting trade.

#### *Trade with Foreign Countries.*

1. *Trade with Russia.*—This trade, which is of very considerable importance, took its rise in the reign of Elizabeth. Archangel, discovered in 1554, by Richard Chancellor, who accompanied the famous Sir Hugh Willoughby in his unfortunate voyage to the north, continued till the reign of Peter the Great to be the only Russian port accessible to foreigners. But, since its foundation, Petersburg has engrossed by far the largest portion of the foreign trade of the empire. The principal articles of import into Great Britain from Russia are tallow, corn, flax and hemp, flax and linseed, timber, bristles, ashes, hides, and wax. Cotton-twist is the principal article of British produce sent to Russia. The rest chiefly consist of woollen manufactures, salt, coal, hardware, lead and shot, tin, &c. We also supply her with considerable quantities of coffee, indigo, spices, and other foreign and colonial articles. Owing to the great bulk of most of the articles brought from Russia, the trade employs a large amount of shipping, which is mostly all the property of English merchants.

2. *Sweden and Norway.*—The trade with these two countries is comparatively unimportant. The imports principally consist of timber, iron, and bark. They would have been much larger, but for the heavy duty imposed on timber from the north of Europe above that imposed on timber from Canada. The influence of this discriminating duty is most pernicious. It not only occasions an artificial increase in the price of timber, but it leads to the substitution of an inferior for a superior article. Previously to 1810, when this distinction was unknown, the exports to Sweden and Norway were much greater. The exports principally consist of cottons and cotton-twist, woollens, earthenware, hardware, coffee, indigo, tobacco, spices, sugar, &c.

3. *Denmark.*—The imports consist almost wholly of corn and rapeseed, with small quantities of butter, bristles, wool, hides, and bark.

The principal exports are coal, salt, iron and steel, earthenware, machinery, coffee, indigo, &c.

4. *Prussia*.—The direct trade to Prussia is not very considerable; but we carry on a large indirect trade with her through Hamburg, the exports and imports being included under the head of Germany. The trade to Prussia, and, indeed to the whole north of Europe, has been materially injured by the discriminating duties on foreign timber. Dantzic is the greatest port, not in Prussia only, but in the world, for the exportation of corn, particularly wheat of the very finest quality. The timber of Dantzic and Memel is also excellent. Besides corn, of which we fetch, in bad years, a larger supply from Prussia than from any other country, the direct imports consist principally of oak and fir timber, with small quantities of bark, bristles, wool, spelter, flax, &c. With the exception of refined sugar and salt, the British produce directly exported to Prussia is inconsiderable. But, exclusive of colonial products, we supply her, through Hamburg, with large quantities of cottons, hardware, earthenware, &c.

5. *Germany*.—The trade to Germany, which is principally carried on through Hamburg and Bremen, is of great extent and importance. Since the introduction of merino sheep into Saxony in the latter part of last century, German wool has been so much improved that it is now decidedly superior to that of Spain, and forms one of the leading articles of import into this country. Germany also supplies us with large quantities of corn, and with wine, butter, linens, hides, clover and rapeseed, smaltz, spelter, and zaffre, furs (particularly fitch), wooden clocks, and other inferior articles. The exports principally consist of cotton-stuffs and twist, woollens, refined sugar, hardware, earthenware, iron and steel, coal, salt, &c. The Germans are extensive importers of colonial produce. They are our largest customers for indigo, coffee, rum, tobacco, and cotton-wool. They also take from us considerable quantities of spices, &c.

Within the last few years, Prussia has prevailed on by far the greater number of the secondary and smaller German states to enter into a commercial league, by adopting a uniform tariff of duties on imports, and establishing a free system of internal commerce. Previously to the adoption of this plan, each petty state had its own custom-houses, and its own system of duties and revenue laws: these frequently differed widely from those of its neighbours, so that the internal trade of the country was subject to all the vexatious restrictions that are usually laid on the intercourse between distant and independent states, and was, in consequence, comparatively trifling. But these restraints are now entirely got rid of. Internal custom-houses, and separate custom-duties, no longer exist. Each state gets a fair proportion of the duties, collected at the frontier of the territories of the league; and a commodity admitted at any one of the external custom-houses may be subsequently conveyed, without let or hindrance, from Hamburg to Königsberg, and from Stettin and Dantzic to the frontiers of the Tyrol. It was at first supposed by many, that this system would be injurious to our commerce with Germany; but there seems to be no good ground for any such apprehension. The freedom of internal commerce has done more to promote the prosperity of the countries included within the league than any other measure their rulers could have adopted; and, as popu-

lation increases, and the inhabitants become more wealthy, there will, no doubt, be an augmented demand for foreign products. Generally speaking, the duties are moderate; and if any attempt were made to raise them to an exorbitant height, the facilities for smuggling along the frontiers of the league are so very great that they could not be collected.

6. *Holland*.—Under this head we include the trade with Belgium. The imports are butter, cheese, corn, madder, geneva, flax and tow, hides, linens, seeds, toys, &c. The exports are principally cotton-stuffs and twist, woollens, hardware, earthenware, salt, coal, &c. We also supply them with a good deal of coffee, cocoa, indigo, and tobacco.

7. *France*.—In consequence of the violent animosities that have unhappily subsisted between England and France, the trade between these two great countries was long confined within very narrow limits. Each was jealous of the other's prosperity, and laboured to depress the trade of its neighbour, though in doing so it might inflict a more serious injury on its own subjects. But the folly of this conduct has at length become apparent, and sounder principles are beginning to prevail. The high discriminating duty on French wines, imposed soon after the revolution of 1688, has been repealed; and the British markets have also been opened to French silks. These concessions have been met in France with a corresponding spirit; and the trade between the two countries has latterly become of very great importance. The late reduction of the exorbitant duty on foreign brandy will, no doubt, contribute materially to its extension.

The principal imports from France are brandy, wine, silk (raw and manufactured), gloves, madder, eggs, skins, and fruit. The exports are linens, and linen yarn, the export of which has rapidly increased within the last dozen years; brass and copper manufactures, machinery, coal, horses, &c.

8. *Portugal and Spain*.—The chief articles of import from the Peninsula are port and sherry, wines which have long had the ascendancy in the English market. We also import considerable quantities of wool (though less now than formerly), raisins and other dry fruits, lemons and oranges, olive-oil, quicksilver, barilla, &c. On some recent occasions, Spain has supplied us with considerable quantities of corn. The principal exports are cotton-stuffs, woollens, linens, hardware and cutlery, iron and steel, soap and candles, leather, &c. Spain is our largest customer for cinnamon.

9. *Italy*.—The trade with Italy has increased greatly within these few years, and is now of much value and importance. Italian thrown-silk is of the finest quality, and forms a considerable item in our imports; but we receive it mostly at second-hand through France. Besides silk, we import large quantities of olive-oil, with straw-hats, straw plait, and straw to be made into plait,—the imports of hats having materially declined of late years, while those of plait and straw have been greatly augmented. We also import wheat (chiefly at second-hand from the Black Sea), currants, lemons and oranges, wine, barilla, shumac, bark, cheese, lamb-skins, hemp, and various minor articles. Our exports are principally cotton-stuffs and twist (for which Italy is one of our best markets), refined sugar, woollen manufactures, hardware and cutlery, iron and steel, &c. She also takes off large quantities of coffee, indigo, tobacco, pimento, &c.

10. *Turkey, Greece, &c.*—The principal imports are silk, opium, madder, figs, raisins, valonia, oil, cotton, currants, senna, &c. The exports are cotton manufactures and twist in large quantities, with a small supply of linens, hardware, iron and steel, cordage, woollens, earthenware, &c. The exports of indigo and coffee are considerable.

11. *Africa.*—The trade to Africa, with the exception of that to the British possessions and Egypt, is quite inconsiderable. The principal imports from Egypt are cotton-wool, flax and linseed, senna and other drugs. The exports are cotton manufactures, iron and steel, arms and ammunition, machinery, &c. The colonial and other foreign products sent to Egypt are not worth notice.

12. *Foreign West Indies.*—The trade with the foreign West Indies is of very considerable importance. It is principally carried on with Cuba, Hayti, and St. Thomas. The imports principally consist of sugar, coffee, cotton, cigars, &c. The exports are cotton manufactures, earthenware, linen manufactures, hardware, iron and steel, woollens, glass, machinery, &c.

13. *United States.*—The identity of language, and the prevalence of similar customs and habits, would necessarily occasion a considerable intercourse between Great Britain and the United States. This, however, has been materially promoted by the peculiar circumstances under which the latter have been placed. Occupying a country of vast extent and great natural fertility, most part of which is still a wilderness, agriculture was, of course, the most profitable employment in which the citizens of the United States could engage; and there being no country that could supply them with most descriptions of manufactured goods so cheaply as Great Britain, we have continued, since the peace of 1784, to maintain the same ascendancy in their markets that we enjoyed while they were our colonists. The American legislature has, indeed, endeavoured, by dint of prohibitions and bounties, to raise up a manufacturing interest. But, as might have been foreseen, the attempt has proved eminently unsuccessful; and has been productive, not only of great national loss, but of so much dissatisfaction that, unless the legislature had given way and modified the tariff, the integrity of the Union would, most likely, have been compromised.

Tobacco was, at one time, the principal article of export from the United States; but, since Mr. Whitney invented his machine for separating cotton wool from the pod (see vol. i., art. COTTON MANUFACTURE), the increase in the growth of cotton has been rapid beyond all precedent, and it now forms by far the most important article of export from America. Tobacco is still, however, a very valuable article; and we fetch from the United States more than nine-tenths of all that is consumed in this country. The other articles of import are wheat-flour and wheat, rice, skins and furs, hides, staves, &c. Our exports of cotton, linen, and woollen manufactures to the United States are very large. We also supply them with hardware and cutlery, earthenware (of which they are very extensive buyers), and with salt, brass and copper, apparel, books, &c.

14. *South American States.*—With the exception of Brazil, most of these countries have been for a long series of years in a very unsettled state. The most violent party animosities have existed; and industry of all sorts has been much depressed. But symptoms of a

better order of things are beginning to disclose themselves; and were liberal governments established on anything like a solid basis, the resources of the countries are so very great, that there can be little doubt they would speedily become the seats of industry and of an extensive commerce. Our trade with Brazil is at present of as much importance as that with all the rest of these states. Next to it is our trade with Mexico, La Plata, Chili, &c. The principal articles of import are bullion and precious stones, cotton wool, sugar and coffee, cocoa, hides, fruits, bark, dye-woods, furs, &c. Our principal exports are cottons, linens, and woollens. We also send them earthenware, hardware, soap, and candles, and a variety of subordinate articles.

*Trade with Colonies and Dependencies, including the Trade with China.*

1. *Colonies in Africa.*—Of these the Cape of Good Hope is the most important. It is more valuable, however, from its position in reference to our Indian Empire than from its commerce, which is of comparatively little value. The principal imports are wool, wine (which, with the exception of Constantia, is for the most part very inferior), hides, ivory, skins, aloes, &c. The exports consist chiefly of cotton, woollen, and linen manufactures, apparel, earthenware, hardware, iron and steel, soap and candles, stationery, &c.

Sierra Leone, on the western coast of Africa, was founded principally in the view of promoting the civilisation of the negroes; but it has cost vast sums, without in any respect answering the views of its projectors. The principal article of import from Western Africa is palm-oil; we also import ivory, teak timber, wax, hides, dye-woods, &c. The exports are cotton goods, guns and pistols, hardware, salt, soap, and candles, &c.

Mauritius is now become quite a sugar island; and is placed, in all respects, under the same regulations as the islands in the West Indies. Sugar has become almost the only product of the colony, and is, consequently, almost the only article of import. We send to it cotton goods, linens, iron and steel, machinery, apparel, &c.

2. *Asia.*—The trade to China used to be mixed up in the official statements with the trade to Hindostan. Of the imports from the former, tea and silk are by far the most important, the former having become almost a necessary of life in England. Indigo, or, perhaps, sugar, is the most important article brought from India; and next to it are cotton, silk, coffee, pepper, saltpetre, piece-goods, rice, lac-dye, &c. The imports from Ceylon are principally coffee, cinnamon, cocoa-nut oil, ivory, &c. We bring tin and pepper from the eastern islands; and mace and cloves at second hand from Amboyna. Wool is the great article of import from New South Wales and Van Diemen's Land, the quantities having wonderfully increased.

Previously to 1814 we hardly exported any cottons to the East; our imports of piece-goods being at the same time considerable. But at this epoch the trade to Hindostan was opened to private adventurers; and, while the imports of piece-goods have been since either stationary or declining, there has been a most extraordinary increase in the exports of cotton goods to India; so much so, that that country is now one of our best markets for cotton stuffs and twist. The other

articles of export are woollens, linens, earthenware, copper, hardware, iron and steel, leather, glass, machinery, &c. The precious metals were, for a lengthened period, one of the most profitable articles of export to the East; but within these few years the tide has occasionally set in the opposite direction, and large quantities have been imported.

3. *American Colonies.*—The settlements on the inhospitable shores of Hudson's Bay furnish a considerable supply of furs; and Newfoundland is famous for its fish. Our trade with Canada, Nova Scotia, &c., is very extensive; but this has been, in a considerable degree, ascribable to the heavy discriminating duty on timber from the north of Europe, which forced the importation of a dearer and a worse article from Canada. The other imports are wheat, ashes, furs, skins, turpentine, &c. The exports are principally woollens, cottons, and linens, hardware, iron and steel, soap and candles, earthenware, apparel, glass, cordage, coal, butter and cheese, &c.

4. *West Indian Colonies.*—Sugar forms the grand article of import from these colonies. Next to it is coffee; and then follow rum, cotton, pimento, molasses, mahogany, logwood, fustic, cocoa, cochineal, ginger, hides, &c. The exports are principally cotton-stuffs, linens, woollens, apparel, soap and candles, hardware, iron and steel, fish, earthenware, cordage, beef and pork, arms and ammunition, &c.

I. *An Account of the Value of the Imports into, and of the Exports from, the United Kingdom, during each of the Years from 1798 to 1852, both inclusive, calculated at the Official Rates of Valuation, and distinguishing the Amount of the Produce and Manufactures of the United Kingdom exported from the Value of the Foreign and Colonial Merchandise exported; exhibiting, also, the Real or Declared Value of the Produce and Manufactures of the United Kingdom annually exported therefrom.*

| Years. | Value of Imports into the United Kingdom, at the Official Rates of Valuation. | Value of Exports from the United Kingdom, at the Official Rates of Valuation. |                                   |                | Value of Produce and Manufactures of United Kingdom, Exported according to the Real Value thereof. |

\* The great increase in the *official*, and the comparatively stationary amount of the *real*, value of the exports, has occasioned a great deal of erroneous discussion. The rates by which the official values of the exports are estimated were fixed in 1806, so that they have long ceased to be any test of their actual value, and are of use only as showing the fluctuations in the quantities exported. To supply this deficiency a plan was set on foot by Mr. Pitt, for keeping an account of the real value of the exports from the declarations of the exporters. Now, it has been contended that, while the great increase in the official value of the exports since 1815 shows that the quantity of the articles exported has been proportionally augmented, their nearly stationary real value shows that we are selling this larger quantity for about the same price,—a result which is said to be most injurious. But the circumstance of a manufacturer or a merchant selling a large or a small quantity of produce at the same price, affords no criterion of the advantageousness of the sale; for if, through improvements in the arts or otherwise, a particular article may now be produced for half the cost of its production 10 or 20 years ago, it is obvious that double the quantity may be afforded at the same price without injury to the producers. And this has been most strikingly the case with the great articles of cotton, hardware, &c. The fall in the price of the former enables us to export and sell with a profit (for, unless such were the case, does any one suppose the exportation would continue?) at the same price, more than double the cotton stuffs and twist that we exported in 1815? Surely, however, this is, if anything can be, a decisive proof of manufacturing improvement and commercial prosperity.

II. Account of the real or declared Value of the various Articles of the Manufacture and Produce of the United Kingdom, Exported to Foreign Countries, during each of the Six Years ending with 1852; specifying the Countries to which they were Exported, and the Value of those Annually Shipped for each; and showing also the Average Amount of Exports during the said Six Years to each Country, and to each of the Five Great Divisions of the Globe; and the Average Proportion Exported to each, supposing the whole Exports to be 1000.

*Places where Foreign Trade is principally carried on.*—The following table of the gross and nett duties collected at the different custom-houses of the United Kingdom affords the best measure that can be obtained of the trade of each. It must not, however, be altogether depended upon. Some ports are principally distinguished by their export, and others by their import, trade; and the greater portion by far of the customs' duties being laid on imports, the trade of the exporting ports is made to appear less than it really is, while that of the importing ports is made to appear greater. On the whole, however, the table is not very wide of the mark, and for most practical purposes may be held to be correct.

*Account of the Gross and Nett Amount of Customs' Duties received at each Port of the United Kingdom during the Years 1850 and 1851.*

SECT. 3.—*Means and Instruments by which Commerce may be facilitated and carried on.*

1. MONEY.—The circumstances that occasioned the introduction and use of gold and silver coins in all civilised societies have been repeatedly elucidated. They serve both as standards by which to measure the value of other things, and as the universal equivalent, or *merchandise bannale*, the employment of which serves, in no ordinary degree, to facilitate exchanges.

In England, a pound troy, or 12 oz. of the metal of which silver coins are made, contains 11 oz. 2 dwts. pure silver, and 18 dwts. alloy. Since 1816 this pound has been coined into 66 shillings, so that each of our current shillings contains 80·727 grains fine silver, and 87·27 grains standard silver; and the money pound, consisting of 20 such shillings, contains 1614·545 grains pure silver, and 1745·454 grains standard silver. All the English silver coins have been coined out of silver of 11 oz. 2 dwts. fine from the Conquest to this moment, except for the short period of 16 years, from the 34th Henry VIII. to 2nd Elizabeth.

The fineness of gold is estimated by carat grains, equivalent to 24 dwts. troy; gold of the highest degree of fineness, or pure, being said to be 24 carats fine. The purity of our present gold coins is 11 parts fine gold and 1 part alloy. The sovereign, or twenty-shilling piece, contains 113·001 grains fine gold, and 123·274 grains standard gold. The pound troy of standard gold is coined into 46 sovereigns and  $\frac{1}{4}$ ths of a sovereign, or into 46*l.* 14*s.* 6*d.* The mint or standard price of gold is, therefore, said to be 46*l.* 14*s.* 6*d.* per pound troy, or 3*l.* 17*s.* 10½*d.* an ounce.

The alloy in coins is reckoned of no value: it is allowed in order to save the trouble and expense that would be incurred in refining the metals to their highest degree of purity; and because, when its quantity is small, it renders the coin harder, and less liable to be worn or rubbed. Were the quantity of alloy considerable, it would lessen the splendour and ductility of the metals, and would add too much to the weight of the coins.

Originally, the coins of all countries seem to have had the same denominations as the weights commonly used in them, and contained the exact quantity of the precious metals indicated by their name. Thus the talent was a weight used in the earliest period by the Greeks; the as, or pondo, by the Romans; the livre by the French; and the pound by the English and Scotch; while the coins originally in use in Greece, Italy, France, and England, bore the same names, and weighed precisely a talent, a pondo, a livre, and a pound. The standard has not, however, been preserved inviolate, either in ancient or modern times. The necessities of governments, and the unfounded notion so generally diffused that coins derived their value rather from the coinage than from the quantity of metal contained in them, have everywhere led to their degradation. They have been less enfeebled in this than in any other country; but even here the quantity of silver in a pound sterling is less than the third part of a pound weight, the quantity it contained down to 1300. At the union of the crowns, in

1604, the coins current in Scotland contained the *twelfth part* only of the silver they contained in 1296. In France the livre, current in 1789, contained less than one sixty-sixth part of the silver implied in its name, and which it had contained previously to 1103. In Spain, and some other countries, the degradation has been carried even further.

When two metals, as gold and silver, are formed into coins, and may be used indifferently as legal tenders in all payments, the proportion which the one bears to the other must be fixed by authority. But how accurately soever this proportion may be made to correspond with the real value of the metals when it is fixed, it will not continue to be accurate for any considerable period. Each of the metals is liable to have its value affected by circumstances which may not influence the other; and whenever any variation of this sort takes place, it becomes the interest of all debtors to use that metal only which is overvalued, so that it becomes the only currency. In the French mint silver was for a long period overvalued, as compared with gold; and in England gold was for a long period overvalued, as compared with silver; and hence the reason that silver coins form almost the sole currency of France; and that from the accession of George I. gold coins have been the principal currency of England.

The following table, calculated by Martin Folkes, Esq., exhibits in a brief space the various alterations that have been made in our money standard, from the Conquest down to 1816.

*Table showing the Fineness of the Silver in English Coins, the Weight of Twenty Shillings in tale, the Value of such Twenty Shillings in present Money, &c., from the Conquest to 1601.*

| Reigns and Years.     | Fineness of the Silver. | Weight of 20s. in tale, Troy Weight. | Value in present Money. | Proportion. | Fine Gold to fine Silver. |
|-----------------------|-------------------------|--------------------------------------|-------------------------|-------------|---------------------------|

\* The Saxon, or Tower pound, which was then the common weight, and continued to be the money weight till the 18th Henry VIII., was but 11 oz. 5 dwt. troy; so that 20 shillings in tale was then exactly a pound in weight.

From the 43rd of Elizabeth no change was made in the silver coinage for more than two centuries, or till 1816, in the 56th of George III., when the pound of silver was coined into 66 instead of 62 shillings; the additional 4 shillings being retained by govern-

ment as a seignorage or duty (amounting to 6½ per cent.) on the coinage. This, however, did not really in any degree affect the standard of our currency, which for about a century previously had in fact consisted of gold and not of silver. This system, which had grown up in the way stated above, was, in 1816, established by law. Gold was then declared to be the only legal tender in all payments of more than 40s.; and the weight of the silver coins being at the same time reduced, they became a merely subsidiary species of currency, the supply of which was retained exclusively in the hands of government. This system has been found to answer extremely well. No seignorage is charged on the coinage of gold, the expense of which amounts to about 10s. per cent.

The quantity of gold coin at present in circulation in Great Britain, exclusive of that in the coffers of the Bank of England and of her branches, is supposed to amount to about *thirty* millions.

*Value of Foreign Coins in Sovereigns.*—Owing to the sovereign or standard coin of this country consisting of gold, while the standard coins of most other countries consist of silver, the value of the one as compared with the others does not depend merely on the quantity of pure gold in the sovereign and the quantity of pure silver in the franc, dollar, &c., but partly on that circumstance, and partly on the relative values of gold and silver at the time. At present a franc is worth about 9·7*d.*; a Spanish dollar, 4*s.* 4*d.*; a Company's rupee, 2*s.*; a Prussian rixdollar, 3*s.*, and so forth.

Copper coins are only legal tender to the extent of 1*s.*; being in respect of silver what silver coins are now in respect of gold.

**PAPER MONEY—BANKS.**—Notwithstanding the precious metals are, in many respects, admirably fitted to serve as a medium of exchange, they have two very serious drawbacks, their cost, and the difficulty and expense of carrying them from place to place. If the currency of Great Britain consisted only of gold, it would amount to at least sixty millions of sovereigns; and the expense attending such a currency, allowing only ½ per cent. for wear and tear and loss of coins, could not be reckoned at less than 3,250,000*l.* a-year. It is obvious, too, that were there nothing but coins in circulation, the conveyance of large sums from place to place, to discharge accounts, would be a very laborious process, and that even small sums could not be conveyed without considerable difficulty; and hence it is that most commercial and highly civilised nations have endeavoured to fabricate a portion of their money of less costly materials, and have resorted to various devices for economising the use of coin. Of the substitutes for coin hitherto suggested, paper is, in all respects, the most eligible. Instead of discharging their debts by a payment of the precious metals, individuals, on whose solvency the public may rely, pay them by giving a bill or draft for the sum, payable in coin at sight, or at so many days after date; and as this bill, or draft, passes currently from hand to hand as cash, it performs all the functions of coin, while it saves its expense to the public. A sense of the advantages that might be derived from the circulation of such bills or drafts led to the institution of banks for their regular issue.

By a bank of this description, or a *bank of circulation*, is meant an

establishment founded by one or more individuals, known or believed to be possessed of large property, for the accommodation of the public with loans. A banker, on being applied to for a loan, does not make the advance in gold or silver, or other valuable material, but in his own promissory notes or engagements, binding him to pay the sums specified in them at sight, when presented at the bank, or at some specified period. When a bank is in good credit, its notes are deemed by the public equivalent to a corresponding amount of gold or silver; and, being freely accepted in payment of debts of all sorts, and easily carried about or conveyed by post, they are even more useful to those who originally borrowed them from the bank, and to their subsequent holders, than an equal sum in coin. The borrowers, therefore, do not scruple to pay the same interest for the loan of a promissory note of 100*l.* or 1,000*l.* that they would do for a loan of a hundred or a thousand sovereigns. But the note costs the issuer comparatively little. He, in fact, deals in credit, or in obligations to pay, and not in real values; his profits consisting in the excess of interest derived from the notes or obligations he has issued over and above the interest of the cash or unproductive stock he is obliged to keep in his coffers to meet the demands of the public for payment of his notes, and the expenses of his establishment.

Besides these sort of banks there are also *banks of deposit*, or banks for keeping the money of individuals. A merchant, or other person, using a bank of this sort, makes all his considerable payments by drafts upon his bankers, and sends all the bills due to him to them to be presented, and noted if not duly paid. By this means he saves the trouble and expense of keeping a quantity of unemployed money at home, avoiding, also, the risk of receiving coins or notes that are not genuine, and of making any mistakes with respect to the presentation of due bills; and in consequence of the saving of money that is thus effected, a much less quantity serves for the demand of the public.

If a bank of circulation, or an establishment for the issue of notes, fall into discredit, its notes must obviously cease to circulate. Unless when guaranteed by government, or made legal tender, no one ever takes promissory notes, except on the supposition that they will be paid when presented or when due, and that they are substantially equivalent to cash. The moment any suspicion (whether well or ill-founded is so far of little consequence) arises that the issuers of notes are unable to meet their obligations, there is a run upon them for payment, and their notes are rejected by every one.

All banks of circulation are necessarily almost at the same time banks of deposit; but there are in all commercial countries a good many of the latter class of banks only.

*English Banks.*—Banking establishments for the issue of notes, and for taking care of people's money, have existed in this country since the latter part of the seventeenth century. The Bank of England was founded in 1694, and has long been the greatest bank of circulation and deposit in the world. From its foundation it has enjoyed several peculiar privileges. The principal of these was conferred upon it in 1708, by an Act which prohibited any company from being established for the issue of notes payable on demand in England

III. *Description and Value of the Produce and Manufactures of the United Kingdom, Exported from Great Britain to Foreign Parts, according to the Real or Declared Value thereof, in 1850, 1851, and 1852.*

*Places where Foreign Trade is principally carried on.*—The following table of the gross and nett duties collected at the different custom-houses of the United Kingdom affords the best measure that can be obtained of the trade of each. It must not, however, be altogether depended upon. Some ports are principally distinguished by their export, and others by their import, trade; and the greater portion by far of the customs' duties being laid on imports, the trade of the exporting ports is made to appear less than it really is, while that of the importing ports is made to appear greater. On the whole, however, the table is not very wide of the mark, and for most practical purposes may be held to be correct.

*Account of the Gross and Nett Amount of Customs' Duties received at each Port of the United Kingdom during the Years 1850 and 1851.*

**SECT. 3.—Means and Instruments by which Commerce may be facilitated and carried on.**

1. **MONEY.**—The circumstances that occasioned the introduction and use of gold and silver coins in all civilised societies have been repeatedly elucidated. They serve both as standards by which to measure the value of other things, and as the universal equivalent, or *marchandise bannale*, the employment of which serves, in no ordinary degree, to facilitate exchanges.

In England, a pound troy, or 12 oz. of the metal of which silver coins are made, contains 11 oz. 2 dwts. pure silver, and 18 dwts. alloy. Since 1816 this pound has been coined into 66 shillings, so that each of our current shillings contains 80·727 grains fine silver, and 87·27 grains standard silver; and the money pound, consisting of 20 such shillings, contains 1614·545 grains pure silver, and 1745·454 grains standard silver. All the English silver coins have been coined out of silver of 11 oz. 2 dwts. fine from the Conquest to this moment, except for the short period of 16 years, from the 34th Henry VIII. to 2nd Elizabeth.

The fineness of gold is estimated by carat grains, equivalent to  $2\frac{1}{2}$  dwts. troy; gold of the highest degree of fineness, or pure, being said to be 24 carats fine. The purity of our present gold coins is 11 parts fine gold and 1 part alloy. The sovereign, or twenty-shilling piece, contains 113·001 grains fine gold, and 123·274 grains standard gold. The pound troy of standard gold is coined into 46 sovereigns and  $\frac{1}{11}$ ths of a sovereign, or into 46*l.* 14*s.* 6*d.* The mint or standard price of gold is, therefore, said to be 46*l.* 14*s.* 6*d.* per pound troy, or 3*l.* 17*s.* 10½*d.* an ounce.

The alloy in coins is reckoned of no value: it is allowed in order to save the trouble and expense that would be incurred in refining the metals to their highest degree of purity; and because, when its quantity is small, it renders the coin harder, and less liable to be worn or rubbed. Were the quantity of alloy considerable, it would lessen the splendour and ductility of the metals, and would add too much to the weight of the coins.

Originally, the coins of all countries seem to have had the same denominations as the weights commonly used in them, and contained the exact quantity of the precious metals indicated by their name. Thus the talent was a weight used in the earliest period by the Greeks; the as, or pondo, by the Romans; the livre by the French; and the pound by the English and Scotch; while the coins originally in use in Greece, Italy, France, and England, bore the same names, and weighed precisely a talent, a pondo, a livre, and a pound. The standard has not, however, been preserved inviolate, either in ancient or modern times. The necessities of governments, and the unfounded notion so generally diffused that coins derived their value rather from the coinage than from the quantity of metal contained in them, have everywhere led to their degradation. They have been less enfeebled in this than in any other country; but even here the quantity of silver in a pound sterling is less than the third part of a pound weight, the quantity it contained down to 1300. At the union of the crowns, in

1604, the coins current in Scotland contained the *twelfth part* only of the silver they contained in 1296. In France the livre, current in 1789, contained less than one sixty-sixth part of the silver implied in its name, and which it had contained previously to 1103. In Spain, and some other countries, the degradation has been carried even further.

When two metals, as gold and silver, are formed into coins, and may be used indifferently as legal tenders in all payments, the proportion which the one bears to the other must be fixed by authority. But how accurately soever this proportion may be made to correspond with the real value of the metals when it is fixed, it will not continue to be accurate for any considerable period. Each of the metals is liable to have its value affected by circumstances which may not influence the other; and whenever any variation of this sort takes place, it becomes the interest of all debtors to use that metal only which is overvalued, so that it becomes the only currency. In the French mint silver was for a long period overvalued, as compared with gold; and in England gold was for a long period overvalued, as compared with silver; and hence the reason that silver coins form almost the sole currency of France; and that from the accession of George I. gold coins have been the principal currency of England.

The following table, calculated by Martin Folkes, Esq., exhibits in a brief space the various alterations that have been made in our money standard, from the Conquest down to 1816.

*Table showing the Fineness of the Silver in English Coins, the Weight of Twenty Shillings in tale, the Value of such Twenty Shillings in present Money, &c., from the Conquest to 1601.*

| Reigns and Years.     | Fineness of the Silver. |      | Weight of 20s. in tale, Troy Weight. |          | Value in present Money. |     | Proportion. | Fine Gold to fine Silver. |

\* The Saxon, or Tower pound, which was then the common weight, and continued to be the money weight till the 18th Henry VIII., was but 11 oz. 5 dwt. troy; so that 20 shillings in tale was then exactly a pound in weight.

From the 43rd of Elizabeth no change was made in the silver coinage for more than two centuries, or till 1816, in the 56th of George III., when the pound of silver was coined into 66 instead of 62 shillings; the additional 4 shillings being retained by govern-

ment as a seignorage or duty (amounting to 6½ per cent.) on the coinage. This, however, did not really in any degree affect the standard of our currency, which for about a century previously had in fact consisted of gold and not of silver. This system, which had grown up in the way stated above, was, in 1816, established by law. Gold was then declared to be the only legal tender in all payments of more than 40s.; and the weight of the silver coins being at the same time reduced, they became a merely subsidiary species of currency, the supply of which was retained exclusively in the hands of government. This system has been found to answer extremely well. No seignorage is charged on the coinage of gold, the expense of which amounts to about 10s. per cent.

The quantity of gold coin at present in circulation in Great Britain, exclusive of that in the coffers of the Bank of England and of her branches, is supposed to amount to about *thirty* millions.

*Value of Foreign Coins in Sovereigns.*—Owing to the sovereign or standard coin of this country consisting of gold, while the standard coins of most other countries consist of silver, the value of the one as compared with the others does not depend merely on the quantity of pure gold in the sovereign and the quantity of pure silver in the franc, dollar, &c., but partly on that circumstance, and partly on the relative values of gold and silver at the time. At present a franc is worth about 9·7*d.*; a Spanish dollar, 4*s.* 4*d.*; a Company's rupee, 2*s.*; a Prussian rixdollar, 3*s.*, and so forth.

Copper coins are only legal tender to the extent of 1*s.*; being in respect of silver what silver coins are now in respect of gold.

**PAPER MONEY—BANKS.**—Notwithstanding the precious metals are, in many respects, admirably fitted to serve as a medium of exchange, they have two very serious drawbacks, their cost, and the difficulty and expense of carrying them from place to place. If the currency of Great Britain consisted only of gold, it would amount to at least sixty millions of sovereigns; and the expense attending such a currency, allowing only ½ per cent. for wear and tear and loss of coins, could not be reckoned at less than 3,250,000*l.* a-year. It is obvious, too, that were there nothing but coins in circulation, the conveyance of large sums from place to place, to discharge accounts, would be a very laborious process, and that even small sums could not be conveyed without considerable difficulty; and hence it is that most commercial and highly civilised nations have endeavoured to fabricate a portion of their money of less costly materials, and have resorted to various devices for economising the use of coin. Of the substitutes for coin hitherto suggested, paper is, in all respects, the most eligible. Instead of discharging their debts by a payment of the precious metals, individuals, on whose solvency the public may rely, pay them by giving a bill or draft for the sum, payable in coin at sight, or at so many days after date; and as this bill, or draft, passes currently from hand to hand as cash, it performs all the functions of coin, while it saves its expense to the public. A sense of the advantages that might be derived from the circulation of such bills or drafts led to the institution of banks for their regular issue.

By a bank of this description, or a *bank of circulation*, is meant an

establishment founded by one or more individuals, known or believed to be possessed of large property, for the accommodation of the public with loans. A banker, on being applied to for a loan, does not make the advance in gold or silver, or other valuable material, but in his own promissory notes or engagements, binding him to pay the sums specified in them at sight, when presented at the bank, or at some specified period. When a bank is in good credit, its notes are deemed by the public equivalent to a corresponding amount of gold or silver; and, being freely accepted in payment of debts of all sorts, and easily carried about or conveyed by post, they are even more useful to those who originally borrowed them from the bank, and to their subsequent holders, than an equal sum in coin. The borrowers, therefore, do not scruple to pay the same interest for the loan of a promissory note of 100*l.* or 1,000*l.* that they would do for a loan of a hundred or a thousand sovereigns. But the note costs the issuer comparatively little. He, in fact, deals in credit, or in obligations to pay, and not in real values; his profits consisting in the excess of interest derived from the notes or obligations he has issued over and above the interest of the cash or unproductive stock he is obliged to keep in his coffers to meet the demands of the public for payment of his notes, and the expenses of his establishment.

Besides these sort of banks there are also *banks of deposit*, or banks for keeping the money of individuals. A merchant, or other person, using a bank of this sort, makes all his considerable payments by drafts upon his bankers, and sends all the bills due to him to them to be presented, and noted if not duly paid. By this means he saves the trouble and expense of keeping a quantity of unemployed money at home, avoiding, also, the risk of receiving coins or notes that are not genuine, and of making any mistakes with respect to the presentation of due bills; and in consequence of the saving of money that is thus effected, a much less quantity serves for the demand of the public.

If a bank of circulation, or an establishment for the issue of notes, fall into discredit, its notes must obviously cease to circulate. Unless when guaranteed by government, or made legal tender, no one ever takes promissory notes, except on the supposition that they will be paid when presented or when due, and that they are substantially equivalent to cash. The moment any suspicion (whether well or ill-founded is so far of little consequence) arises that the issuers of notes are unable to meet their obligations, there is a run upon them for payment, and their notes are rejected by every one.

All banks of circulation are necessarily almost at the same time banks of deposit; but there are in all commercial countries a good many of the latter class of banks only.

*English Banks.*—Banking establishments for the issue of notes, and for taking care of people's money, have existed in this country since the latter part of the seventeenth century. The Bank of England was founded in 1694, and has long been the greatest bank of circulation and deposit in the world. From its foundation it has enjoyed several peculiar privileges. The principal of these was conferred upon it in 1708, by an Act which prohibited any company from being established for the issue of notes payable on demand in England

and Wales with more than six partners. This restriction continued till 1826, when it was abolished, in so far as respects all places more than 65 miles distant from London; but within that distance it still prevails.

In consequence of this regulation, and of the great capital and credit of the Bank of England, its notes have always been held in the highest estimation; and no bank for the issue of promissory notes payable on demand has been established in or near London. In the provinces, however, numerous private banks of issue and deposit have always existed. Since the close of the American war, their numbers have been greatly increased; and since the abolition of the restriction on the number of partners, in 1826, many banks have been established, some with very large bodies of proprietors. Except in the case of the Bank of England, all the holders of stock in the other English banks are liable, not merely for the amount of their share in the capital stock of the company, but for its whole debts, whatever may be their amount.

From the first establishment of the Bank of England, down to 1797, it always paid its notes regularly when presented. But in the course of 1796, and the early part of 1797, there was, owing to the prevalence of reports of invasion, a pretty severe run upon the Bank of England, and it was at length apprehended that she might be obliged to make a temporary stoppage. To avert a contingency of this sort an order in council was issued in February, 1797, authorising the bank not to pay her notes in gold; and this order was subsequently confirmed by parliament, and prolonged till after the conclusion of a definitive treaty of peace.

Contrary to what might have been and was anticipated by many, the order referred to did not stop the circulation of Bank of England notes, or diminish the confidence of the public in that establishment. The Report of a Committee of the House of Commons, published soon after the suspension, showed that the bank was not merely possessed of the most ample funds to meet all her engagements, but that she had a surplus stock, after all demands upon her were deducted, of no less than 15,513,000*l*. This Report, and the fact that the Bank of England notes became *practically legal tenders*, secured their circulation.

The obligation on the issuers of paper to pay their notes on demand is necessary, not only to give them circulation, but to prevent their being issued in excess; for as soon as any considerable over-issue takes place, the currency becomes depreciated as compared with that of other countries, and notes are, in consequence, returned upon the banks for payment, in order to get gold and silver to send abroad where their value is higher; and the banks, to obviate the drain, are obliged to narrow their issues. London being the centre, where the exchanges with other countries are adjusted, the value of its currency determines the state of the exchange; and it also determines the value of the currency of the provinces, there being a constant demand upon the country banks for gold or bills on London. While the Bank of England was obliged to pay in specie, the value of her notes could not, and in point of fact did not, differ materially from that of gold. But

in 1799 or 1800, after the check of cash payments had been removed, they began to be depreciated from excess; and during the last half dozen years of the war their depreciation was carried to such an extent, that the ounce of standard gold, which should be worth only 3*l.* 17*s.* 10½*d.*, was, in 1814, actually worth 5*l.* 4*s.*, being a depreciation of 25½ per cent. !

The difficulties which had been thrown during the latter years of the war in the way of importation from abroad, combined with deficient crops at home, caused an extraordinary rise in the price of corn. But no sooner had the northern ports been opened, in the autumn of 1814, than a large importation, accompanied by a heavy fall of prices, began to take place, which was still further increased after the general pacification in 1815. This fall proved ruinous to many farmers who had been large borrowers from the country banks; and in consequence of the losses arising from this and other causes that grew out of the altered situation of the country, a general want of confidence was experienced, and an immense number of country banks became insolvent. There is believed to have been in 1814, 1815, and 1816, a greater destruction of bank paper in this country than had ever previously taken place anywhere else, except, perhaps, at the breaking up of the Mississippi scheme in France. The contraction of the currency, that had been thus violently brought about, raised its value nearly to par, and paved the way for the Act of 1819, the 59 Geo. III. c. 78, commonly called "Peel's Act," from its having been introduced by Sir Robert Peel, which provided for the return to cash payments by the Bank of England at the old standard. These were resumed in 1821.

Much difference of opinion has prevailed as to the policy of this Act, and this is not a proper place for discussing its merits. We believe, however, that it was a wise as well as a just measure, and that the inconveniences that have been said to result from it have been very greatly exaggerated. The principal objection made to it is, that it raised the value of money, and, consequently, enriched creditors and the holders of funded property at the expense of their debtors and of the public. But supposing this to be true, the measure took no person, or at least should have taken no person, by surprise. It had been declared in numerous Acts of Parliament that cash payments were to be resumed within six months after a definitive treaty of peace. Every loan had been contracted under this condition; and the legislature might as well have declared that it was not bound to pay the interest of the debt as that it was not bound to pay in coin of the standard weight and purity.

It was impossible, therefore, for the legislature to refuse returning to cash payments; and whatever may have been the influence of that measure at the time is now matter of history, and is beyond the reach of human power to obviate or repair. Supposing that it raised the value of money, that money has been the standard for twenty-seven years. Forty-nine out of every fifty of the existing contracts, obligations, and estimates, have been entered into and framed with reference to it; so that, whether enhanced or not at the outset, to interfere with it now would not be to repair injustice, but to commit it afresh—it would be to rob and plunder the present race of creditors, on pretence that the

individuals who were creditors twenty-seven years ago had gained an undue advantage!

But we take leave to deny that the return to cash payments made any sensible addition to the value of money. If we ask where are the proofs of its having done so, we are referred to the fall that has since taken place in the prices of most articles. But this is plainly no proof at all. Prices may, no doubt, be reduced by a rise in the value of money; but they may also be reduced by a decline in the cost of production; and, so far as we can discover, we incline to think that this has been the sole cause of the entire fall that has taken place since the resumption of cash payments. The advocates of the opposite opinion have never been able, though often called upon, to specify a single article, either of domestic or foreign growth or manufacture, that has fallen in price since 1819, the fall of which may not be satisfactorily accounted for by circumstances peculiar to its production or supply, or both, independently altogether of variations in the value of money. We believe there is no such article. The fall that has taken place in agricultural and in colonial products, in manufactured goods, &c., is entirely ascribable to improved and cheaper methods of production; to the abolition of monopolies, the reduction of taxes, the opening of new and more abundant sources of supply, or to some such cause. Not a tittle of evidence has been, nor we apprehend can be, brought to show that the fall of prices has been owing, even in a solitary instance or in any degree, to a rise in the value of money. This is an opinion for which there seems to be no real foundation whatever—a phantom that was conjured up, that a wholesale robbery of public and private creditors might be perpetrated under cover of the speculation and alarm caused by its appearance.

Notwithstanding that the bankruptcy which overspread the country in 1814, 1815, and 1816, was mainly ascribable to the defective constitution of the country banks, and to the reckless and improvident manner in which they were managed, no steps were taken when the resumption of cash payments was decided upon in 1819 to obviate any one of these sources of mischief. The consequences were such as might have been anticipated. A peculiar combination of circumstances having conspired to produce an extraordinary rage for speculative undertakings in 1824 and 1825, the country bankers gave into the infatuation, and made the most sudden and excessive additions to their issues. In consequence the currency became redundant; and this having occasioned a heavy drain for gold on the Bank of England, the latter was, in the end, obliged to contract her issues. The country banks, whose engagements had in many instances been carried to an extent quite incommensurate with their capital, began to give way the moment they experienced an increased difficulty of obtaining pecuniary accommodation in London; and so rapid and sweeping was the destruction, that in less than six weeks above 70 banking establishments were swept off, and a vacuum created in the currency that absorbed from *eight* to *ten* millions of additional issues by the Bank of England!

This catastrophe seems at length to have satisfied the parliament and people of England that the private banking system was weak and vicious, and that it was imperatively necessary it should be amended

and strengthened. In this view the clause in the Act of 1708, already referred to, prohibiting any private bank from having more than *six* partners, was repealed; and the issue of notes for less than 5*l.*, the circulation of which began in 1797, was also forbidden.

The last measure shut up, no doubt, one of the easiest channels through which the inferior order of country bankers got their paper into circulation, and has been in so far advantageous. But abundance of other channels were still open to them; and the fact that a third part of all the private banks existing in England and Wales, in 1792, were destroyed during the revulsion of that year, though no notes for less than 5*l.* were then in circulation, shows how little the suppression of small notes can do to obviate the mischiefs complained of. Very important advantages were, however, expected to result from the other measure, or that repealing the Act of 1708, and consequently allowing the formation of joint stock banks, or banks with any number of partners. But these anticipations have proved to be nearly, if not quite, fallacious. There cannot, in fact, be a greater error than to suppose that because a bank has a considerable number of partners it will necessarily be either rich or well managed. It may be neither the one nor the other. A single individual may possess more wealth than a number of individuals associated together; and the chances are, that if he engage in banking or any other business, it will be better managed than by a company. Under our present system, (and it cannot be prevented under any system,) the partners in joint stocks, as in other banks, may be men of straw, or persons without property, and unable to fulfil their engagements. It is of the essence of a secure and well established paper currency that the notes of which it consists should be of the exact value of the gold or silver they profess to represent, and that, consequently, they should be paid the moment they are presented. But it is not enough to order that this condition shall be uniformly complied with. Such order is obeyed only by the opulent, prudent, and conscientious banker, and forms little or no check on the proceedings of those of a contrary character. It is the latter class, however, that it is especially necessary to look after; and it is needless to say that any system that permits notes to be issued without let or hindrance by speculative, ignorant, or unprincipled adventurers, must be essentially vicious.

It has sometimes been contended, in vindication of the plan of allowing any individual or set of individuals, how bankrupt soever in fortune and character, to issue notes without check or limitation of any kind other than the promise to pay them on demand, that they are essentially *private paper*; that their acceptance in payment is optional; and that as they may be rejected by every one who either suspects or dislikes them, there is no room or ground for interfering with their issue! But everybody knows that, whatever notes may be in law, they are in most parts of the country *practically and in fact legal tender*. The bulk of the people are totally without power to refuse them. The currency of many extensive districts consists in great part of country notes, and such small farmers or tradesmen as should decline taking them would be exposed to the greatest inconveniences. Every one makes use of or is a dealer in money. It is not employed by men of business only, but by persons living on fixed incomes; by women, labourers, minors; in

short, by every class of individuals, very many of whom are necessarily, from their situation in life, quite unable to form any estimate of the solidity of the different banks whose paper is in circulation. Such parties are uniformly severe sufferers by the failure of banks. The paper that comes into their hands is a part of the currency or money of the country; and it is quite as much the duty of government to take measures that this paper shall be truly and substantially what it professes to be, as that it should take measures to prevent the issue of spurious coins or the use of false or deficient weights and measures.

The fact is, that the paper currency of the country cannot be on a perfectly sound footing until the issue of notes, whether by joint stock banks or private individuals, be suppressed. It has been proposed, to obviate any recurrence of the wide-spread ruin that has so frequently resulted from the bankruptcy of banks of issue, to compel them to give security for the payment of their notes; and the adoption of such a regulation would, no doubt, have been a vast improvement on the late system. But though the exacting of security would materially mitigate, it would not eradicate the vices of a system which allows banks to be established at the pleasure of individuals. A paper currency is not in a sound or wholesome state, unless, 1st, means be taken to insure that each particular note or parcel of such currency be paid immediately on demand; and unless, 2nd, *the whole currency vary in amount and value exactly as a metallic currency would do were the paper currency withdrawn and coins substituted in its stead.* The last condition is quite as indispensable to the existence of a well-established currency as the former; and it is one that cannot be fully realized otherwise than by confining the issue of paper to a single source.

It is easy to see that were paper issued only by the Bank of England, or some one source in London, and then only *in exchange for bullion*, the currency would be in its most perfect state, and would fluctuate exactly as it would do were it wholly metallic. But at present the currency is supplied by hundreds of individuals and associations, all actuated by different and frequently conflicting views and interests. The issues of the Bank of England, previously to the late changes, were generally, though not always, governed by the state of the exchange, or rather by the influx and efflux of bullion, increasing when it flowed into, and decreasing when it flowed out of the country. But it was quite otherwise with the provincial bankers. Their issues were not regulated by any such standard, but by the state of credit and prices in the districts in which they happened to be situated. If their managers supposed that these were good or improving, they rarely hesitated about making additional issues. Hence, when the state of the exchange and the demand on the Bank of England for bullion showed that the currency was redundant, and ought to be contracted, the efforts of the Bank to effect its diminution were often impeded, and met by a contrary action on the part of the country banks. This was not owing to the ignorance of the latter. Under the supposed circumstances, the country bankers, saw speaking generally, that they ought also to contract; but being a very numerous body, comprising several hundred establishments scattered over all parts of the country,

each was impressed with the well-founded conviction that all that he could do in the way of contraction would be next to imperceptible ; and no one ever thought of attempting it, so long as he felt satisfied of the stability of those with whom he dealt. On the contrary, every banker knew, were he to withdraw a portion of his notes, that some of his competitors would most likely have embraced the opportunity of filling up the vacuum so created ; and that consequently he should have lost a portion of his business, without in any degree lessening the amount of paper afloat. Hence, in nineteen out of twenty instances, the country banks went on increasing their aggregate issues long after the exchange had been notoriously against the country, and the Bank of England had been striving to pull up.

The circumstances now stated were strikingly exemplified in the course of 1836, and the early part of 1837. The excessive multiplication of joint stock banks in 1836, the great additions they made to the number of notes afloat, and the still greater additions they made to the number of bills, checks, and other substitutes for money, occasioned a redundancy of the currency, a fall of the exchange, and a drain upon the Bank of England for gold. But while the latter was narrowing her issues, by supplying the exporters of bullion with gold in exchange for notes, the country banks went on increasing their issues ! What the former did by contracting on the one hand, the latter more than undid by letting out on the other. The vacuum created by the withdrawal of Bank of England paper was immediately filled up, and made to overflow by the issue of a more than equal amount of provincial paper ; so that had it not been for the rise in the rate of interest, and the other repressive measures adopted by the Bank, the probability is that she might have gone on paying away bullion for notes till she was drained of her last sixpence, without in any degree affecting the exchange. But this was not all. Not only did the country banks almost universally increase their issues when they should have been diminished, but the moment they were compelled to set about their reduction, they ran headlong into the opposite extreme, and unreasonable suspicion took the place of blind unthinking confidence. The cry of *saute qui peut* then became all but universal. A recoil seldom took place without destroying more or fewer of the provincial banks ; and provided the others succeeded in securing themselves, little attention was usually paid to the interests of those they had taught to look to them for help.

We have previously noticed the bankruptcy and distress entailed on the country by the over-issue and consequent failure of the country banks in 1814, 1815, 1816, and again in 1825-26. The influence of the revulsion in 1792 was similar, and equally disastrous ; and though, owing to the assistance afforded by the Bank of England, the crisis of 1836 was very much mitigated, it seriously affected the industry and commerce of the empire, and inflicted a blow upon them both, from the effects of which they did not recover for a lengthened period.

But, however desirable, the total suppression of the issue of notes by joint stock and private banking companies, would have been a measure too much opposed to popular prejudices, and to the interests of a large

an powerful class, to have had any chance of being carried ; and there, also, would have been great though inferior difficulties in the way of the project for taking securities. It was, indeed, quite indispensable, in attempting to obviate the defects inherent in our banking system, to proceed with extreme caution, to respect in as far as possible, existing interests, and to avoid taking any step that might excite the fears and apprehensions of the public ; the grand difficulty being to reconcile such a course with the introduction of any plan that would obviate in any considerable degree the defects complained of. Happily this difficult problem has been dexterously and satisfactorily solved by Sir Robert Peel ; the measures he introduced and carried through Parliament in 1844 and 1845, for the improvement of our banking system, having been so skilfully contrived as to provoke little opposition, at the same time that they effected very extensive and (as we think) most beneficial changes.

The measures in question consist of the Act 7 and 8 Vict. c. 32, which refers to the Bank of England, and the English country banks ; and the Acts 8 and 9 Vict. caps. 38 and 37, referring to the banks of Scotland and Ireland. The principal object of these statutes has been to obviate the chances of over-issue and of sudden fluctuations in the quantity and value of money, by limiting the power to issue notes payable on demand, and by making the amount of such notes in circulation vary more nearly than previously, with the amount of bullion in the possession of the issuers. Sir Robert Peel adopted, in dealing with the Bank of England, the proposal made by Mr. Loyd, in 1837, for effecting a complete separation between the issuing and banking departments of that establishment. And while the directors are left at liberty to manage the latter at discretion, their management of the former, or issue department, is subjected to what seems to be a well-devised system of restraint. The Bank is allowed to issue 14,000,000*l.* of notes upon securities (of which the debt of 11,015,100*l.* lent by her to Government is a part) ; and whatever paper the issue department may at any time issue over and above this maximum amount of securities, it must have an equal amount of coin and bullion in its coffers.\* Hence it is impracticable for the issue department to increase its issues without, at the same time, proportionally increasing its stock of coin and bullion ; or to diminish the latter without proportionally diminishing the amount of paper supplied to the public and the banking department. And, therefore, if the latter issued the whole notes assigned to it, the total amount issued by the issue department and the amount in circulation would be identical ; and it might under such circumstances be truly said that, in so far as the currency consists of Bank of England notes payable on demand, it varied in amount and value as it would do were it wholly metallic, and, consequently, by being so closely identified with the standard, realised the *beau ideal* of a paper currency.

But, though the currency approaches to, it has not arrived at this

\* A clause is inserted in the Act allowing the Bank to increase her issue upon securities, in the event of her notes being used instead of those of any or all of the existing banks of issue.

degree of perfection. The public does not deal alone with the issue, but also, and to a far greater extent, with the banking department. And this latter department retained such a portion of the notes issued to it by the former, under the 2nd clause of the 7 and 8 Vict. c. 32, as was supposed at the time to be sufficient to carry on its business, their amount having since varied with the varying demands for bullion, the sales and purchases of securities, &c. But it is sufficient, in illustration of what is now stated, to observe that during the week ended the 25th of July, 1846, notes to the amount of 29,312,945*l.* had been issued to the public and the banking department, of which the latter had 8,562,695*l.* in its coffers, making the sum in the hands of the public 20,750,250*l.* And as it is sometimes supposed that the banking department might issue this sum of 8,562,695*l.*, or the spare notes at any time in its coffers, in the discount of bills, or any other way, it is concluded that there is still room for some, though but little, derangement of the currency from mistaken proceedings on the part of the Bank; and this, no doubt, may be sometimes true, at least to some extent. But it is idle to suppose that the banking department could carry on business without a large reserve of notes or of coin. This department may have, owing to a variety of circumstances, to meet a drain for deposits; and as it is very unsafe to trust to the sale of securities in periods of discredit, a very considerable supply of notes or of bullion, or of both, can never be advantageously or safely dispensed with.

This shows the little weight to be attached to the statements of those who contend that the late measure has laid no real restraint on the issues of the Bank, because, say they, she has a large reserve of unissued notes which she might legitimately throw on the market. But in truth and reality she can do nothing of the sort. A reserve is indispensable, not only to her safety, but to her ability to carry on banking business; and it is at present (August, 1846) sufficiently narrow. Without the exercise of due vigilance and caution by the directors, it is within the limits of probability that the banking department of the Bank should be reduced to a state of considerable difficulty without being able to obtain any assistance from the issue department, how able soever the latter might be to render it. It is no longer in the power of the Bank to create paper money at pleasure, to supply the place of cash in any emergency in which she may be involved; and instead of less she will require to act with quite as much circumspection under the new system as under the old.

But though the check on the over-issue of bank notes be thus nearly effectual, it appears rather singular that no check should be established on the issue of bank post-bills, which amounted to 940,024*l.* on the 25th July last, and which are, and may be, substituted for notes. No doubt, however, were the Bank (which is hardly to be imagined) to abuse the privilege of issuing post-bills, by making advances in them which she could not have made in notes, measures would be taken to prevent the abuse; and perhaps, on the whole, it was as well to postpone devising means for the prevention of what seems so unlikely to occur.

Weekly returns are now published of the issues of the Bank, and of the securities, bullion, &c., in her possession. The sum to be deducted by the Bank from the charge on account of the management of the national debt is in future to be 180,000*l.* instead of 120,000*l.* a-year, as fixed by the Act 3 and 4 Will. IV. c. 98. The charter is to be continued till twelve months' notice after the 1st August, 1855.

The provisions made in this Act for restraining the country circulation are, perhaps, still more important. The maximum future issue of the joint-stock and other banks in England and Wales is limited to the average amount of the circulation of each during the twelve months preceding the 27th of April, 1844. It is further enacted that no new bank shall be established for the issue of notes, and that the names of the partners in joint-stock and other banks shall be periodically published.

The regulations in the statutes relating to banking in Scotland and Ireland are nearly similar. The maximum amount of notes to be issued by the banks of both countries is, in time to come, not to exceed the average amount which each bank had in circulation during the twelve months ending the 1st of May, 1845. Certain returns, including amongst others the amount of gold and silver coin held by the banks, the names of the partners, &c., are to be periodically published. The small-note currency of Scotland has not been affected by the measure.

*Account of Total authorized Maximum Circulation of the United Kingdom.*

|                                 | £.        |
|---------------------------------|-----------|
| Bank of England (variable).     | .         |
| English Private Banks . . . . . | 5,011,097 |
| Joint-Stock Banks . . . . .     | 3,477,321 |
| Scotch Banks . . . . .          | 3,087,209 |
| Irish Banks. . . . .            | 6,354,494 |

Being £17,920,121, exclusive of issue of Bank of England.

It is impossible to doubt that these regulations interpose a formidable, if not an insuperable, obstacle to over-issue; and that, consequently, they cannot fail to discourage over-trading, and to reduce both the number and the violence of those commercial revulsions and changes in the value of money that have always been, and must necessarily continue to be, productive of the greatest mischief. No one ever pretended to say that these or any other measures which could be adopted with respect to the currency would wholly prevent unsafe speculation and over-trading. These may originate in an endless variety of circumstances; but in times past the tendency to speculation and gambling, when once set on foot, was in most cases powerfully stimulated by the facility which banks then possessed of issuing additional quantities of paper; and of that facility they are now all but deprived. It is, perhaps, true, that the fair and legitimate influence of the Acts now referred to may be in some degree countervailed by the circulation to a greater extent than formerly of bills and other sorts of paper, not payable on demand but at short dates; and it is not improbable that sooner or later the question may arise, whether any regulations should be adopted in regard to the issue of such paper. In so

far, however, as respects the issue of *paper money*, or notes payable on demand, the late regulations appear to have left little to be desired. The amount of such notes is limited, and it is difficult to imagine, seeing the rapid advances the country is making in wealth and population, that any period should occur when this limited amount of issue will be in excess. No doubt, also, numbers of the private and other banks that now issue notes will from time to time wind up their affairs; and as no new banks of issue can be established in their stead, the vacuum caused by the withdrawal of their notes will be supplied by those of the Bank of England; so that a gradual progress will be made towards the desirable consummation of having only one bank of issue.

It is sometimes contended, by those opposed to the policy of limiting the issues, that they never can be in excess so long as they are payable on demand. Such, however, is not the case: notes payable, *and really paid*, on demand cannot, it is true, fall below the value of specie in the country in which they are issued; but the check of payment in specie does not, in fact, begin to operate till their over-issue has depreciated the value of the whole currency, gold as well as paper, in such country, below its level in the surrounding countries, and till consequently, the exchange becomes unfavourable, and it is of advantage to export gold. Then of course the over-issue is stopped, but such stoppage is almost always accompanied by a great deal of public distress and inconvenience; while it by no means necessarily follows that any considerable portion of the loss thence arising will fall on those banks by whose misconduct or over-issue the fall in the exchange and the demand for bullion may have been occasioned. Happily, however, such a result is, under the new system, nearly impossible; for, as previously remarked, the country can hardly be in such a situation that the maximum amount of notes which the banks may issue, supposing them to be wholly thrown on the market, would depreciate the currency below its proper level, or occasion a foreign demand for bullion.

On the whole, therefore, we are disposed cordially to approve of the late changes. They will give increased stability and security to all transactions; and their operation has already been, and will no doubt continue to be highly beneficial. It may, farther, be safely affirmed, that no measures deeply affecting so many, and such powerful interests, and introducing such extensive changes, were ever brought into Parliament, and carried through it with so little difficulty. This is to be ascribed to the skill with which they were prepared, and which reflects the highest credit on the administrative ability of Sir Robert Peel. Had he attempted more, had he suppressed all local issues, or required security for their payment, he would probably have lost or endangered the great advantages he has gained. The recent measures go far to complete and perfect those which the Right Hon. Baronet introduced and carried through in 1819; they make the currency correspond more nearly with the standard then re-established; and guard, in as far as circumstances will permit, against mutations in its value, and the mischiefs consequent thereon.

In 1833 the charter of the Bank of England was prolonged till

1845; and, as previously seen, it is now prolonged till 1855. Previously to 1833, the notes of the country banks were made payable in gold; but it was then enacted that they might be paid either in gold or in Bank of England notes. In fact, Bank of England notes are now legal tender everywhere except at the Bank and her branches.

The Bank of England is the Government bank, transacting for it all the banking business of the nation, receiving the produce of the taxes, loans, &c., and paying the interest of the public debt, the drafts of the Treasury and other public departments, transferring stock, &c.

The Bank of England, and the private banks of the metropolis, do not give interest on deposits; but it is generally given by the London joint-stock banks and by the banks in other parts of the country. The issues of the Bank of England are chiefly made in advances to Government upon the security of exchequer bills, &c.; but, in periods of distress, or when credit is shaken, she has frequently advanced very large sums to the merchants. She discounts no bills of above three months' date.

*Scotch Banks.*—The Act of 1708, limiting the number of partners in English banks to six, did not extend to Scotland; and most of the banks that have been established in that country have numerous bodies of partners. The Bank of Scotland was founded in 1695, and the Royal Bank in 1727, since which time about 30 other establishments have been formed for the issue of notes. Owing partly to the superior stability derived from their extensive proprietary, but more, perhaps, to the less risk attending the business of banking in Scotland, bankruptcies have been very rare among the Scotch banks. They have long enjoyed the unlimited confidence of the public; and, from their receiving small sums (10*l.*) as deposits, and paying interest upon them at about 1 per cent. below the market rate, they have contributed much to diffuse a spirit of economy, and to increase accumulation. One-pound notes were issued by the Bank of Scotland in 1704; and their issue has been thence continued to the present day, the Act prohibiting their circulation in England not having extended to Scotland. For many years past very little gold coin has been seen in Scotland. The Scotch banks make their advances partly by discount of bills, and partly by what are termed cash accounts, or cash credits. The latter is a very convenient method of issue. A cash account is a credit given by the bank to an individual for a certain sum, which he may draw out wholly or partially as he pleases, replacing it in the same way, being charged interest only on the portion he withdraws. The Scotch banks draw on London at 20 days' date.

*Irish Banks.*—The Bank of Ireland was established in 1783, and the same restriction as to the number of partners in other banks that formerly prevailed in England was enacted in its favour. Owing to that and other causes, the bankruptcies of private banks have been more frequent in Ireland than in England. In 1821 this restriction was repealed, as respects all parts of the country more than 50 Irish miles from Dublin. Since that period several banking companies, with large bodies of partners, have been set on foot in different parts of the country: of these, the Provincial Bank, founded on the Scotch model, is among the most flourishing. We subjoin—

*An Account of the Notes in Circulation of the Bank of England, and of other Banks of Issue in England and Wales, Scotland, and Ireland, during the Year 1853.*

*Note.*—Monthly returns of the circulation and bullion of the Bank of England are not now made to the Stamp Office. Since the Act of 1 and 2 Vict. c. 32, came into operation, in August, 1844, weekly returns only of the state of the issue Department and of the Banking Department have been made for the purpose of publication in the Gazette.

*An Account of the Quarterly Averages of the Weekly Liabilities and Assets of the Bank of England, from the 17th May, 1845, to 24th January, 1846.*

Those who wish for full accounts of the circulation, bullion, &c., of the Bank of England, for a lengthened series of years, may refer to the article on that establishment in the *Commercial Dictionary*. It would take up too much space to give a list of all the English joint stock and private banks, with the maximum authorized issue of each (See *Supp. to Commercial Dictionary*); but we may give the following statements with respect to Scotch and Irish Banks:—

*An Account of the Scotch Banks empowered to Issue Notes, specifying the Maximum Authorized Issue of each, under the 8 and 9 Vict. c. 38, with other particulars.*

| Names of Banks.                    | Head Office. | When Established. | Branches and Sub-Branches. | Number of Partners. | Capital Advanced. | Circulation authorized by 8 & 9 Vict. c. 38. |
|------------------------------------|--------------|-------------------|----------------------------|---------------------|-------------------|----------------------------------------------|
|                                    |              |                   |                            |                     | £.                | £.                                           |

2. WEIGHTS AND MEASURES.—The inconvenience attending the use of weights and measures of the same denomination, but of different magnitudes, was early remarked; and there is hardly a country in which efforts have not been made to reduce them to the same uniform system. Numerous Acts of Parliament have been passed having this object in view, and enjoining the use of the same weights and measures under very severe penalties. But, owing to the inveteracy of ancient customs, and the difficulty of enforcing the new regulations, these statutes have always had a very limited influence, and the greatest diversity has continued to prevail, except in lineal measures. But the statute 5 Geo. IV. cap. 74, seems to have at length effected what former statutes had failed of accomplishing. It is, perhaps, indebted for its success, in this respect, to the limited nature of the changes which it introduced. It made no alteration in the lineal measures previously in use; neither did it affect the previously existing system of weights. The measures of capacity are the only ones which it changed. The wine gallon formerly contained 231 cubic inches, and the ale gallon 282; but these have been both superseded by the imperial gallon, which contains  $277\frac{1}{4}$  cubic inches.

Our ancient historians tell us that a new, or rather a revised, standard of lineal measure was introduced by Henry I., who ordered that the ulna or ancient ell, which corresponds to the modern yard, should be made of the exact length of his own arm, and that the other measures of length should be raised upon it. This standard has been maintained without any sensible variation. In 1742, the Royal Society had a yard made, from a very careful comparison of the standard ells or yards of the reigns of Henry VII. and Elizabeth, kept at the Exchequer. In 1758 an exact copy was made of the Royal Society's yard; and this copy having been examined by a committee of the House of Commons, and reported by them to be equal to the standard yard, it was marked as such. This identical yard is declared by the Act 5 Geo. IV. cap. 74, to be the standard of lineal measure in Great Britain; and provision is made in the Act for its recovery, in the event of its being lost, by declaring that its length is to that of a pendulum vibrating seconds in the latitude of London as 36 to 39·1393 inches.

1. *Linear Measure*, deduced from the Standard Yard.

| Inches. | Links. | Feet. | Yards. | Poles or Perches. | Chains. | Furlongs. | Mile. |
|---------|--------|-------|--------|-------------------|---------|-----------|-------|
| 1       |        |       |        |                   |         |           |       |
| 7.92    | 1      |       |        |                   |         |           |       |
| 12      | 1.515  | 1     |        |                   |         |           |       |
| 36      | 4.545  | 3     | 1      |                   |         |           |       |
| 198     | 25     | 16½   | 5½     | 1                 |         |           |       |
| 792     | 100    | 66    | 22     | 4                 | 1       |           |       |
| 7,928   | 1,000  | 660   | 220    | 40                | 10      | 1         |       |
| 63,360  | 8,000  | 5,280 | 1,760  | 320               | 80      | 8         | 1     |

Among mechanics, the inch is usually divided into eighths; but in scientific investigations it is mostly divided into tenths, hundredths, &c. A degree of the equator contains 69.15 English miles. The English foot = .3048 metres of France = .984 feet of Berlin = 1.064 feet of Hamburg = .927 feet of Lisbon = .972 Rhineland feet = .8727 feet of Russia = 1.078 feet of Spain = .9638 feet of Vienna, &c.

## Superficial Measure, deduced from the Standard Yard.

| Inches.   | Links.  | Feet.  | Yards. | Poles or Perches. | Chains. | Roods. | Acre. |
|-----------|---------|--------|--------|-------------------|---------|--------|-------|
| 62.726    | 1       |        |        |                   |         |        |       |
| 144       | 2.295   | 1      |        |                   |         |        |       |
| 1,296     | 20.661  | 9      | 1      |                   |         |        |       |
| 39,204    | 625     | 272½   | 30½    | 1                 |         |        |       |
| 627,264   | 1,000   | 4,356  | 484    | 16                | 1       |        |       |
| 1,568,160 | 25,000  | 10,890 | 1,218  | 40                | 2½      | 1      |       |
| 6,272,640 | 100,000 | 43,560 | 4,840  | 160               | 10      | 4      | 1     |

The imperial acre is to the Scotch acre as 1 to 1.261, and the Irish, or plantation, acre contains 1 acre 2 roods and 19½ poles; hence 30½ Irish are equal to 49 imperial acres, or the imperial acre is to the Irish acre as 1 to 1.62. One imperial acre = .4046 hectares of France = 1.561 morgen of Prussia = .7025 joch of Austria, &c.

2. *Measures of Capacity*.—*Imperial Liquid and Dry Measure*, deduced from the Standard Gallon, containing 10 lbs. weight of Distilled Water, at the temperature of 62°, barometer 30 inches.

| Weight of Water | Cubic Feet. | Cubic Inches. | Gills. | Pints. | Quarts. | Pottles. | Gallons. | Pecks. | Bushels. | Cooms. | Quartern. |
|-----------------|-------------|---------------|--------|--------|---------|----------|----------|--------|----------|--------|-----------|
| 5 oz.           | ..          | 8.665         | 1      |        |         |          |          |        |          |        |           |
| lbs. 1½         | ..          | 35.659        | 4      | 1      |         |          |          |        |          |        |           |
| 2½              | ..          | 69.318        | 8      | 2      | 1       |          |          |        |          |        |           |
| 5               | ..          | 138.637       | 16     | 4      | 2       | 1        |          |        |          |        |           |
| 10              | ..          | 277.274       | 32     | 8      | 4       | 2        | 1        |        |          |        |           |
| 20              | ..          | 554.548       | 64     | 16     | 8       | 4        | 2        | 1      |          |        |           |
| 80              | 1.2837      | 2,218.191     | 256    | 64     | 32      | 16       | 8        | 4      | 1        |        |           |
| 320             | 5.1347      | 8,872.763     | 1,024  | 256    | 128     | 64       | 32       | 16     | 4        | 1      |           |
| 640             | 10.2694     | 17,745.526    | 2,048  | 512    | 256     | 128      | 64       | 32     | 8        | 2      | 1         |

The old wine gallon contained 231, and the old ale gallon 282, cubic inches. The dimensions of the imperial bushel are—the outer diameter 19½ inches, the inner diameter 18½ inches, and the depth 8½ inches. The Winchester bushel, which used

to be the most common measure for corn in England, contained 2,150·42 cubic inches, being about  $\frac{1}{4}$  part less than the imperial bushel. The quarter of 8 bushels standard measure = 2·907 hectolitres of France = 5·29 bushels of Berlin = 2·76 bushels of Hamburg = 4·728 metzen of Vienna = 1·45 chetwerts of Russia, &c.

3. *Measures of Weight.*—*Troy Weight*, deduced from the Standard Troy Pound of 5,760 grains.

| Troy Grains. | Dwt. | Ounces. | Pound. |
|--------------|------|---------|--------|
| 24           | 1    |         |        |
| 480          | 20   | 1       |        |
| 5,760        | 240  | 12      | 1      |

Gold, silver, platina, jewels, &c. are weighed by troy weight. It is likewise used in ascertaining the strength of spirituous liquors, and other philosophical experiments, and for comparing different weights with each other.

The pound troy = 373·202 grammes of France = ·755 lbs. of Amsterdam = 1·597 marcs of Berlin = ·77 lbs. of Hamburg = ·3732 kilogrammes (French) = ·9116 lbs. of Russia = 1·622 marcs of Spain = 1·33 marcs of Vienna, &c.

A carat is a weight of 4 troy grains. When this term is applied to gold, it denotes its degree of fineness. Any quantity of gold is supposed to be divided into 24 parts or carats: if the whole mass be pure, it is said to be 24 carats fine; if there be 23 parts of pure metal and 1 part of alloy, it is called gold of 23 carats fine; and so on.

#### *Diamond Weight.*

Diamonds and pearls are also weighed by carats of four grains; but 5 diamond grains are only equal to 4 troy grains. This weight is nearly the same all over the globe,—1 oz. troy is equal to 150 diamond carats.

#### *Apothecaries' Weight.*

|                |   |                             |
|----------------|---|-----------------------------|
| 20 troy grains | = | 1 scruple                   |
| 3 scruples     | = | 1 dram.                     |
| 8 drams        | = | 1 ounce.                    |
| 12 ounces      | = | 1 pound, 5,760 troy grains. |

The apothecaries' pound and ounce are the same as the troy pound and ounce, but the smaller divisions are different. This weight is used in medical prescriptions only.

#### *Apothecaries' Fluid Measure.*

|                 |   |                         |
|-----------------|---|-------------------------|
| 1 fluid minim   | = | 0·0037 cub. inch.       |
| 60 fluid minims | = | 1 fluid dram, 0·2256 —  |
| 8 fluid drams   | = | 1 fluid ounce, 1·8047 — |
| 16 fluid ounces | = | 1 fluid pint, 28·8750 — |
| 8 fluid pints   | = | 1 gallon, 231·0000 —    |

*Avoirdupois Weight*, deduced from the Imperial Standard Pound of 7,000 Troy Grains.

| Troy Grains. | Drams.  | Ounces. | Pounds. | Stones. | Quarters. | Hundred Weights. | Ton. |
|--------------|---------|---------|---------|---------|-----------|------------------|------|
| 27·34375     | 1       |         |         |         |           |                  |      |
| 437·5        | 18      | 1       |         |         |           |                  |      |
| 7,000        | 256     | 16      | 1       |         |           |                  |      |
| 98,000       | 3,584   | 224     | 14      | 1       |           |                  |      |
| 196,000      | 7,168   | 448     | 28      | 2       | 1         |                  |      |
| 784,000      | 28,627  | 1,792   | 112     | 8       | 4         | 1                |      |
| 15,680,000   | 373,440 | 35,840  | 2,240   | 160     | 80        | 20               | 1    |

The statute of 5 and 6 Will. IV. cap. 63, enacts, that all articles sold by weight are to be sold by avoirdupois weight, except gold, silver, platina, diamonds, or other precious stones, which may be sold by troy weight; and drugs, which, *when sold by*

*retail*, may be sold by apothecaries' weight. The stone is in *all* cases to consist of 14 lbs. avoirdupois, the cwt. of 8 such stones, and the ton of 20 such cwts.

The pound avoirdupois = 453·544 grammes of France = ·97 lbs. of Berlin = ·908 lbs. of Copenhagen = ·9363 lbs. of Hamburgh = ·50796 kilogrammes (French) = 1·11 lbs. of Russia = ·8097 lbs. of Vienna, &c.

*Bread and Flour Weight.*

|                              |   |                    |
|------------------------------|---|--------------------|
| 4 lbs. 5½ ounces avoirdupois | = | 1 quarter loaf.    |
| 8 lbs. 11 ounces ditto       | = | 1 half peck ditto. |
| 17 lbs. 6 ounces ditto       | = | 1 peck loaf.       |

*Note.*—A peck of flour is 14 lbs.; a bushel of flour 56 lbs.; a boll 140 lbs. A sack, or 3 bushels, is 280 lbs., or 2½ cwt. avoirdupois.

*Hay and Straw Weight.*

|                              |   |          |
|------------------------------|---|----------|
| 36 lbs. avoirdupois of straw | = | 1 truss. |
| 56 lbs. ditto of old hay     | = | 1 truss. |
| 60 lbs. ditto of new         | = | 1 truss. |
| 36 trusses                   | = | 1 load.  |

Hence a load of straw weighs 11¼ cwt.; a load of old hay 18 cwt.; a load of new hay 19¾ cwt. avoirdupois.

By Act 36 Geo. III. cap. 88, each truss of hay, sold between 31st of August in any year and 1st of June in the succeeding year, must weigh 56 lbs.; and every truss of hay sold between 1st of June and 31st August, being new hay of the summer's grass of that year, shall weigh 60 lbs. But by the Act 5 & 6 Will. IV. cap. 63, all local and customary measures are abolished.

*Wool Weight.*

|                     |   |          |          |   |         |
|---------------------|---|----------|----------|---|---------|
| 7 lbs. avoirdupois  | = | 1 clove. | 6½ tods  | = | 1 wey.  |
| 14 lbs. or 2 cloves | = | 1 stone. | 2 weys   | = | 1 sack. |
| 2 stones            | = | 1 tod.   | 12 sacks | = | 1 last. |

A pack of wool is 12 score, or 240 lbs. avoirdupois. In Gloucestershire, 15 lbs. made a stone of wool; while in Hertfordshire the stone was only 13 lbs.; but, as already stated, these local weights are now abolished.

3. **ROADS.**—Highways of one sort or another must, of course, exist in every country emerged from barbarism; but in England, the statute 2 and 3 Philip and Mary, c. 8, is the first legislative enactment in which a regular provision was made for the repair of the roads. At common law every parish was bound to keep the roads that intersect it in good and serviceable condition. But until the epoch now mentioned, this duty, not being devolved upon any particular person, was very much neglected. The preamble to the Act of Philip and Mary declares, that the roads were tedious and noisome to travel on, and dangerous to passengers and carriages; and, therefore, it enacts that in every parish two surveyors of the highways shall be annually chosen by the inhabitants in vestry assembled, and that the inhabitants of all parishes shall be obliged, according to their respective ability, to provide labourers, carriages, tools, &c., for *four* days each year, to work upon the roads under the orders of the surveyors.

The plan of making and repairing roads by contributions of forced labour, though established in most other European countries as well as England, and a very great improvement on the system by which it was preceded, is, notwithstanding, one of the worst that can be imagined. Its defects were long since perceived, and individuals subject to such contribution were allowed to compound with the surveyors on payment of certain rates. But the system is now wholly abandoned. The great lines of road have been long exempted from its operation; and in 1835 the laws relating to cross or parish roads in England

were consolidated by the statute 5 and 6 Will. IV., c. 50. This Act authorises the surveyor, appointed by the vestry, to levy a rate on the parish, on the basis of the assessment for the poor, for the repair and construction of the roads; and it further authorises the rate-payers, if a majority of them shall see fit, to divide among themselves the carriage of the materials for the repair of the roads, being paid for such work at the discretion of the justices. Hence, the rate-payers who now engage to work upon the roads are as much voluntary contractors as if they belonged to another part of the country, and had nothing to do with the assessment. The surveyors are elected for a year, and may be either paid or not. A number of parishes may unite and appoint a district surveyor; and in populous parishes, or those having more than 5,000 inhabitants, a board may be appointed for the superintendence and repair of the highways. Every highway leading to any market-town must be 20 feet wide at least; and every public horseway 8 feet at least. The justices may, at the expense of the parish or district, increase the width of any highway they reckon too narrow, to the breadth of 30 feet, but not more. Directions are also given for the setting up of sign-posts, milestones, &c.

This system has some good and some defective points. It is reasonable to suppose, inasmuch as the surveyor is appointed by the vestry, or principal inhabitants in a parish, by whom also the rate for the construction and repair of the roads must be principally paid, that they will be anxious to select the best individual, to proscribe every useless expense, without, at the same time, allowing the roads to get into a bad state. On the other hand, however, the business of road-making requires considerable scientific skill and practical experience; and the roads of one parish ought to be so combined with those of others as to form part of a consentaneous system. But the parochial surveyors are mostly very deficient in the knowledge of their business, of the principles of which they, in general, know nothing; and, from the want of any combined system, the roads in one parish are frequently very good, while those uniting with them, in the adjoining parishes, may be very bad. It is easier, however, to point out defects than to suggest any efficient remedy. Perhaps the best thing that could be done, would be, to provide for the uniting of parishes into districts of considerable extent; and to restrict the choice of surveyors to persons who had been found qualified, upon examination by competent authority, to undertake the duty.

The system established by the Act of Philip and Mary was improved and consolidated by Acts passed in the reigns of Elizabeth and James I., and for a time answered pretty well. But the great increase of wealth and population that took place during the reigns of James I. and of Charles I. and II., having led to a great increase of travelling and the employment of many pack-horses, wheel carriages, &c., the old system was found to be quite inadequate for the keeping up and repair of the great roads, particularly in the vicinity of London. In consequence a new plan for raising a revenue for the construction and repair of the roads, by imposing tolls, payable at toll-gates (called turnpikes), was introduced by the Act of 26 Charles II., c. 1, which imposed tolls on all travellers by the Great Northern Road passing

through the counties of Hertford, Cambridge, and Huntingdon. This system, however, was for a lengthened period exceedingly unpopular; and it was not till after the peace of Paris, in 1763, that turnpike roads began to be extended to all parts of the kingdom; and that the means of internal communication began, in consequence, to be signally improved. The turnpike roads of England and Wales would, if joined together, form a continuous line of above 23,000 miles in length. The expenditure by the trustees, on account of these roads, in 1841, amounted to 1,551,336*l.*; the revenue for the same year being 1,574,518*l.*: of the total expenditure, 302,182*l.* went to defray interest of debt.—(*Parl. Paper*, No. 580, Sess. 1843.) The length of the various cross roads and other highways, exclusive of turnpikes, is estimated at about 104,000 miles.

The usual method in constructing a turnpike road is to place it, if it be only for a short distance, under the management of a set of trustees; but if its length be considerable, it is usually placed under the management of various sets of trustees, each set being entrusted with the care of a certain portion. The trustees are appointed by Act of Parliament; and in general consist not merely of the proprietors of the estates through and contiguous to which the road passes, but also of the principal farmers and most opulent tradesmen in the vicinity. All details, with respect to the construction and repair of turnpike roads, are committed to the care of surveyors, appointed by and acting under the orders of the trustees.

The trustees may borrow money on security of the tolls and other revenues under their control. By this means they are enabled to complete, without delay, an undertaking that it might otherwise be impossible to accomplish for many years. This expedient is, in consequence, often resorted to. Most trusts are, indeed, largely indebted. Exclusive of a large amount of floating debt, the debt secured by mortgage of tolls, &c., on the turnpike roads of England, amounted, in 1829, to 5,578,815*l.*!

This system has some very obvious defects. The trustees are too numerous, and seldom act on any well-considered systematic principle: they too often appoint incompetent surveyors; their accounts are not subjected to any examination, nor do they act under any sufficient responsibility; and owing to the number of trusts on the same road, it is frequently, in different parts, in a very different state of repair. The late Sir Henry Parnell suggested means for obviating these defects. Of these, the principal seem to be the obliging of the trustees to select by ballot a small committee from among themselves, to whom the management of the revenue and all that belongs to the trust, including the appointment and dismissal of surveyors, should be committed. Sir Henry farther suggested that all sets of trustees should be obliged to forward statements of their accounts and proceedings to the Commissioners of Land Revenue, who should be authorised to appoint engineers to examine into the state of the roads, and in some degree to control the management of the different trusts. The carrying of some such suggestions into effect would, no doubt, be in various respects an improvement on the existing system. But we should, notwithstanding, be extremely jealous of any plan that tended to bring

the management of the turnpike roads under the control of any single board. Such a plan would most likely lead to the improvement of the great lines of road, and we should not object to its being applied to them. But if *all* turnpike roads were subjected to such control, it is abundantly certain that the same thing that has happened in France would happen here; that is, that a few great roads would be kept in good order, while the other roads, though of hardly less importance, would be comparatively neglected.

*State of the Roads.*—Though vastly improved, as compared with their condition about the middle of last century, when, indeed, they were in various places all but impracticable for wheeled carriages, many of the turnpike roads continued down to a late period to be, and some are still, in a very bad state. But previously to the time, when the public attention began to be wholly diverted from the public roads to railways, the former had been very greatly improved; and a few had been constructed on the most approved principles. The road from London to Holyhead is one of these, and is, without doubt, one of the best in the kingdom. It was not formed under the superintendence of road trustees, but of parliamentary commissioners, appointed for the purpose, who employed the late Mr. Telford, as their engineer. But, with this, and a few other exceptions, most part of the roads were far from being in the state that might have been expected, and in which, indeed, they ought to be. The principal defect consists in their unevenness, for instead of being carried round, they are, even where the distance saved is nothing, or but inconsiderable, mostly carried over hills. Besides this defect, “the breadth of a road is seldom defined to a regular number of feet, by straight and regular boundaries, such as fences, footpaths, mounds of earth, or side channels. The transverse section of the surface when measured is rarely to be found of a regular convexity. The surface of all the roads, until within a few years, was everywhere cut into deep ruts; and even now, since more attention has been paid to road works, though the surface is smoother, the bed of materials which forms it is universally so thin, that it is weak, and consequently, exceedingly imperfect. Drainage is neglected; high hedges and trees are allowed to intercept the action of the sun and wind in drying the roads; and many roads, by constantly carrying away the mud from them for a number of years, have been sunk below the level of the adjoining fields, so that they are always wet and damp, and extremely expensive to keep in order, owing to the rapid decay of the materials laid upon them.”\*

The following rules for the construction of roads have been deduced from the treatise now referred to, which has generally been admitted to be the best work hitherto published on this important department of national economy:—1st. Where practicable, an even line should be always selected; and where it is departed from, the acclivity should not, if possible, exceed 1 foot in 35 or 40. 2ndly. The road should be made of a regular uniform width, and properly fenced off. 3rdly. A road which is likely to be much used, particularly by heavy carriages, should always be constructed with a foundation or bottoming of large stones, laid in the form of a pavement, over

\* *Treatise on Roads*, by Sir Henry Parnell, Bart. M. P., p. 27.

which should be spread a thick covering of stones broken small. 4thly. The surface of the roads should be uniform, smooth, and convex. And 5thly. The road should be raised above the level of the surrounding ground, and kept thoroughly dry by proper drains, having sufficient outlets for their water.

*Scotch Roads.*—The principal roads in Scotland are turnpike roads, and the Acts in relation to them are similar to those of England; “but in consequence of the excellent materials which abound in all parts of Scotland, and of the greater skill and science of Scotch trustees and surveyors, they are superior to the turnpike roads of England.”—(*Parnell*, p. 313.)

The provision for repairing roads and bridges in Scotland originally consisted, as in England, of the compulsory or statute labour of the inhabitants, with their horses, carts, &c., for three days before, and three days after harvest. And in the reign of George I. it was enacted (5 Geo. I., c. 30.), that in the event of the statute labour not being sufficient for the repair of the highways, an assessment, not exceeding one-half per cent., on the valued rent, might be imposed on landed property to make up the deficiency. The administration of all highways that are not turnpike roads, or included under the modern county Acts, is committed, by the old law of Scotland, to the justices of the peace and the commissioners of supply—that is to the justices and the proprietors of lands worth 100*l.* Scotch, and upwards, of valued rent. Two general meetings of these justices and commissioners are held yearly in each county, for the regulation of all matters concerning the highways. The meetings are empowered “to set down a particular list of highways, bridges, and ferries within their bounds, and to divide the parishes of the said bounds, as they lie nearest to the several highways to be repaired, and as they may have the most equal burdens; and to appoint such of their number, or others, overseers of such parts and portions of the said highways as are most convenient and nearest to their ordinary residence; and to nominate such of their number as they see fit to survey and give an account of the highways, bridges, and ferries, unto the rest; with powers to them to appoint meetings, from time to time, till the survey, list, and division of the said highways be closed.”—(*Act*, 1669, c. 10.)

But since 1750 this system has been much modified. At that period, the roads of Scotland were in the most wretched state imaginable, being, in fact, in most places, mere horse-paths, and these practicable only at certain seasons of the year. After the country began to improve, and wealth to increase, the necessity of adopting some more efficient system for the repair of the roads became obvious. In consequence, Acts of Parliament were obtained, authorising the formation of the turnpike roads, and regulating the amount of toll to be charged on those using them.\* Since then, also, most of the Scotch counties have obtained local Acts, by which the statute labour is commuted for a fixed money payment, and power is given to impose assessments on landed property; but the rates of commutation, and

\* The first of these acts, the 23 Geo. II. c. 17, was passed in 1750. It was for the repair of the great post road from Douglas Bridge to the town of Haddington, and thence to Ravenshaugh Burn, in the county of Haddington.

the maximum of assessment, differ in different counties, according to the varying circumstances of each. By these Acts the administration of all matters relating to the roads is vested in trustees. Sheriffs depute and substitute, and all persons in the commission of the peace, are appointed trustees: with all individuals, and their eldest sons, being owners of estates worth 100*l.* Scotch a year, and upwards, of valued rent; one guardian or trustee of all minors possessing such property; and the provost and the two eldest bailies of every burgh. The Act usually divides the county into districts; the trustees residing in each district being appointed to manage the roads contained in it.

The district trustees, at their meetings, prepare statements and estimates, which are laid before the general meeting of the trustees of the county.

The latter have power to order an assessment to be made on the occupiers of lands, not exceeding the amount prescribed in the Act.

The proceedings of the trustees of the districts, at their meetings, are subject to the direction, revision, and control of the general meetings.

The trustees of the district meetings, appoint surveyors of the roads in their districts, with salaries.

Sufficient powers are given to the trustees for obtaining land and materials, and for making, widening, and repairing roads, and building bridges.

According to Sir Henry Parnell, this system of managing the highways has the following advantages over the English system of parish management:—

“1st. A more efficient governing authority is provided.

“2nd. The obstacle to a uniform and efficient management of the roads, which the small divisions of parishes occasion, is obviated, by giving the general management of all the roads of a county to the general meetings of the trustees.

“3rd. The funds for maintaining the roads are derived from a regular assessment on the lands, instead of by statute labour.

“4th. The surveyors are appointed permanently, and with fixed salaries.

“The experience of the manner in which the new Scotch system has worked, fully establishes its great superiority over the old Scotch system, which still exists in some counties, and over the English parish system; and leads to the conclusion that it is expedient to make it universal in Scotland, and substitute it in England instead of the English system.”—(P. 315.)

It is not easy for those accustomed to travel along the smooth and level roads by which every part of Scotland is now intersected to form any accurate idea of the difficulties the traveller had to encounter in that country a century ago. Roads were then hardly formed; and, in summer, not unfrequently consisted of the bottoms of rivulets. Down to the middle of last century, most part of the goods conveyed from place to place in Scotland, at least where the distances were not very great, were carried, not by carts or wagons, but on horseback. Oatmeal, coals, turf, and even straw and hay, were conveyed in this way! At that period, and for long previously, single-horse traffickers

(cadgers) regularly plied between different places, supplying the inhabitants with such articles as were then most in demand, as salt, fish, poultry, eggs, earthenware, &c.; these were usually conveyed in sacks or baskets, suspended one on each side the horse. But in carrying goods between distant places, it was necessary to employ a cart, as all that a horse could carry on his back was not sufficient to defray the cost of a long journey. The time that the *carriers* (for such was the name given to those that used carts) usually required to perform their journeys seems now almost incredible. The common carrier from Selkirk to Edinburgh, *thirty-eight* miles distant, required a *fortnight* for his journey between the two places, going and returning! The road originally was among the most perilous in the whole country; a considerable extent of it lay in the bottom of that district called Galawater, from the name of the principal stream, the channel of the water being, when not flooded, the track chosen as the most level, and easiest to travel in!

Even between the largest cities the means of travelling were but little superior. In 1678, an agreement was made to run a coach between Edinburgh and Glasgow, a distance of 44 miles, which was to be drawn by *six* horses, and to perform the journey from Glasgow to Edinburgh and back again in *six* days. Even so late as the middle of last century, it took  $1\frac{1}{2}$  day for the stage coach to travel from Edinburgh to Glasgow, a journey which is now accomplished in  $4\frac{1}{2}$  or 5 hours.

So late as 1763, there was but one stage coach from Edinburgh to London, and it set out only once a month, taking from 12 to 14 days to perform the journey. Previously to the late opening of the railway, by which they have been in a great measure superseded, there were, exclusive of steam packets, smacks, &c., three or four coaches which set out each day from Edinburgh for London, and conversely, performing the journey in from 45 to 48 hours.—(*Robertson's Rural Recol.* pp. 39—44.)

*Highland roads.*—Besides the roads constructed in Scotland under the system now described, a large extent of excellent road has been formed, either wholly or partly at the public expense, and under a different system of supervision. During the rebellion of 1715 the royal troops were unable, from the want of roads and the impracticable nature of the country, to advance beyond Blair in Athol; and to obviate this inconvenience in future, government soon after began to employ part of the troops quartered in Scotland in the construction of military roads in different parts of the Highlands, which, when finished, extended in all to about 800 miles. Unluckily they were not well planned: being for the most part carried, wherever it was practicable, direct from place to place, they were necessarily hilly, and were, also, too narrow. About the commencement of the present century, it became a question whether it was worth while for Government to continue to defray the expense of keeping these roads in repair. But, though it was ascertained that they were no longer of any material use as military roads, they were found to be of the greatest importance as affording a means of communication; and the inquiries then set on foot, impressed Government with a conviction, that nothing

would contribute so much to the improvement of the Highlands as their intersection with good roads. But, this being an undertaking that exceeded the limited means of the proprietors and inhabitants, parliamentary commissioners were appointed, who were authorised to decide upon the roads proper to be constructed, and to superintend their execution; the public agreeing to defray half the cost of such roads, the other half being defrayed by the proprietors, or other persons benefited thereby. The measure has been most successful. "The Highland counties were prompt to the call, in contributing their quota. The whole amount of parliamentary advances, including interest, has been 267,000*l.*, and the county advances 214,000*l.*; they being only liable for half the expense of making the roads, the expense of general management falling on the public. About 60,000*l.* beyond these sums have been defrayed by individuals; so that about 540,000*l.* have been expended upon the Highland parliamentary roads. The length of new roads formed by this joint fund has been 875 miles, and the number of bridges of all kinds 1,117. With the exception of 148 miles in Argyle and Bute, these parliamentary roads lie almost wholly in Inverness-shire and the northern counties."—(*Anderson's Highlands*, p. 60.) The operations were conducted by Mr. Telford; and, though the region which the roads traverse be the most mountainous and rugged in the empire, they have been laid out with so much skill and judgment, that the acclivities are almost every where moderate.

Since the parliamentary roads were undertaken, a large portion of the old military roads has been allowed to fall into disrepair; but nearly 300 miles of them are still kept up. In 1814 they were placed under the control of the parliamentary commissioners, who have now about 1,200 miles of road under their care. The total charge on account of repairs, &c., amounts to about 10,000*l.* a year.

It would not be easy to enumerate the advantages that have resulted from the construction of these roads. They have done more than anything else that could have been done to promote the improvement of the Highlands. The proprietors have made very great exertions to extend the advantages of improved communication to districts removed from the parliamentary roads. In the county of Sutherland only, about 350 miles of road have been constructed, at the expense of the county since 1810, exclusive of the parliamentary roads.

*Irish roads.*—The roads of Ireland are, generally speaking, well laid out, and in a good state of repair. This result is ascribed, by Sir Henry Parnell, to the abolition of the old system of statute labour in 1763, and the placing of the construction and administration of roads under the control of the grand juries. The method of proceeding is as follows:—Any person who wishes to have a new road constructed, presents a memorial to the grand jury at the assizes, with an affidavit of its necessity. A deliberation then takes place upon the subject, and, if the grand jury allow the presentment, the road is either made or repaired, as the case requires: the accounting presentment is sworn to, and must receive the sanction of the judge. Mail coach roads are determined upon by the postmaster-general, and the expense is defrayed by a tax on the county. The money for other roads is

raised by a baronial tax, each barony paying the expense of the roads within its boundaries.—(*Wakefield's Ireland*, vol. i., p. 657.)

Besides the roads constructed under the above regulations, a considerable extent of road has, within these few years, been constructed in different parts of the country, at the public expense, under the superintendence of the Board of Public Works. These roads are said to have been productive of the best effects; but it seems unreasonable that those through whose property they pass, and who are principally benefited by them, should contribute nothing towards the expense of their construction, and of keeping them in repair.

#### RAILWAYS.

But every existing means of communication, whether by improved roads or canals, is already nearly superseded, at least between places of any importance, by the construction of railways and the employment of locomotive engines. These, which rank among the most important and most advantageous improvements and discoveries of modern science, have effected a total revolution in the means and methods of conveyance. They have immeasurably increased the facilities of communication; passengers and goods being transported by their agency, from place to place, with a celerity, cheapness, and (where proper precautions are taken) security, that could not previously have been supposed possible; and which, in fact, are all but miraculous.

*Construction of Railroads.*—The friction on a perfectly level railroad, properly constructed, is estimated to amount to from one-seventh to one-tenth only of the friction on an ordinary level road; so that, supposing the same force to be applied in both cases, it would move a weight from 7 to 10 times as great on the former as on the latter. But if there be a very moderate ascent, such as 1 foot in 50, which in an ordinary road would hardly be perceived, a great increase of power on the railroad is required to overcome the resistance that is thus occasioned. The reason is, that the ordinary load on a level railroad is about *seven times as great* as on a common turnpike road; so that when the force of gravity is brought into operation by an ascending plane, its opposing power, being *proportioned to the load*, is 7 times as great as on a common road. Hence the vast importance of having railroads either level or as nearly so as possible.

It is also of great importance that railroads should be straight, or, at least, free from any abrupt curves. Carriages being kept on the road by *flanges* on the wheels, it is obvious, that where the radius of the curves is comparatively short, the friction on the sides of the rails, and consequent retardation, are proportionally great. In the Manchester and Liverpool Railroad, the curves form segments of a circle which, if extended, would embrace a circumference of 15 miles.

Iron railroads, the kind now generally used, are of two descriptions. The *flat rail* or *tram-road*, consists of cast-iron plates about 3 feet long, 4 inches broad, and  $\frac{1}{2}$  inch or 1 inch thick, with a flange, or turned up edge, on the inside, to guide the wheels of the carriage. The plates rest at each end on *sleepers* of stone or wood, sunk into the earth, and they are joined to each other so as to form a continuous

horizontal pathway. They are, of course, double; and the distance between the opposite rails, or width of *gauge*, which, of course, determines the width of the carriage, is from 4 feet 8½ inches, the narrow, to 7 feet the wide gauge; the former being, however, by far the more extensively introduced. The *edge rail*, which is found to be superior to the tram rail, is made either of wrought or cast iron; if the latter be used, the rails are about 3 feet long, 3 or 4 inches broad, and from 1 to 2 inches thick, being joined at the ends by cast-metal sockets attached to the sleepers. The upper edge of the rail is generally made with a convex surface, to which the wheel of the carriage is attached by a groove made somewhat wider. When wrought iron is used, which is in many respects preferable, the bars are made of a smaller size, of a wedge shape, and from 12 to 18 feet long; but they are supported by sleepers at the distance of every 3 feet. In the Liverpool Railroad the bars are 15 feet long, and weigh 75 lbs. per lineal yard. The waggons in common use run upon 4 wheels of from 2 to 3 feet in diameter. Railroads are either made double, one for going and one for returning; or they are made with *sidings*, where the carriages may pass each other.

*Speed of Carriages on Railroads, &c.*—The effect of railways in diminishing friction is familiar to every one; and they have long been used in various places of this and other countries, particularly in the vicinity of mines, for facilitating the transport of heavy loads. But it is only since the application of locomotive engines as a moving power, that they began powerfully to attract the public attention, and that their value has been fully appreciated. These engines were first brought into use on the Darlington and Stockton Railroad, opened on the 27th of December, 1825; but it was not till the opening of the railway between Manchester and Liverpool that the vast importance of this novel means of intercourse was fully perceived. This work, though now far surpassed in magnitude by other railroads, cost nearly a million sterling. It has the advantage of being nearly level; for, with the exception of a short distance at Rainhill, where it is inclined at the rate of 1 foot in 96, there is no greater inclination than in the ratio of 1 foot in 880. The length of the railway is about 31 miles; and it was usual from its opening to perform this journey in handsome carriages attached to the locomotive engines, in 1½ hour, or less! So far, indeed, as respects the facility of passing from the one to the other, this railway has brought Manchester and Liverpool as near to each other as the western part of London is to the eastern part!

The opening of this railway having more than verified the most sanguine anticipations as to the success of such undertakings, and gone far, in fact, to strike time and space out of the calculations of the traveller, gave an extraordinary stimulus to similar undertakings in all parts of the country; and in no long period, there were hardly any two considerable places in Great Britain, how distant soever, which it was not proposed to connect by railways. An immense number of companies have been formed, and a very large amount of capital expended upon, and subscribed for carrying on these undertakings; and there can be no doubt that the country has profited very

largely by the railway system, the facility of intercourse having been prodigiously extended, at the same time that the greater number of the principal lines of road have proved, in a pecuniary point of view, exceedingly beneficial to the parties engaged in them. Latterly, however, railway projects have been carried to an absurd extent; they have been made the pretence for many swindling schemes, and have given birth to an amount of gambling highly prejudicial to industry, and disgraceful to the public. Of the innumerable schemes that are now (1846) before parliament, that are likely to be sanctioned, a large proportion can hardly fail of being ruinous to their projectors.

Among the greater lines of railway now (1846) existing, may be specified the London and North Western, stretching from London, by Manchester and Liverpool, to Carlisle, and which is about being farther prolonged to Glasgow: this is one of the greatest public works ever executed in any country, and is a striking result of the wealth, science, and civilisation of modern times. The railway from London to Bath and Bristol, and thence to Exeter, is also a magnificent work; and is, in some respects, superior to any other in the kingdom. Among the other leading railways may be specified those from London to Southampton, Brighton, and Dover; the Eastern Counties; Midland; North Midland; and North of England Railways; and those from Carlisle to Newcastle, from the latter to Edinburgh; from Edinburgh to Glasgow and Ayr, with a host of others. We subjoin a—

*Table showing the Length of the principal British Railways open in 1846, the Sums expended upon each, &c., with the Dividends per Share and per Cent. per Annum.*

| Names of Railways.                               | Miles Open in 1846. | Total Sums raised by Shares. | Total Sums raised by Loans or Mortgage. | Total Sums Expended at Dates of latest Balance Sheets. | Cost of Working for Six Months, as stated in latest Balance Sheets. | Total Earnings for Six Months, as stated in latest Balance Sheets. | Dividend at Meeting previous to August, 1846. |                      |

*Railway Legislation.*—But, notwithstanding the vast advantages which the opening of so many new and improved lines of communication have conferred on the country, we cannot help thinking that these advantages might have been much greater, and that, in the instance of railway legislation, the public interests have been overlooked to a degree that is not very excusable. It is, we admit, no easy matter to decide how far the interference of government should be carried in matters of this sort. But, at all events, this much is obvious, that when parliament is called upon to pass an Act authorising private parties to execute a railway or other public work, it is bound to provide, in as far as practicable, that the public interests shall not be prejudiced by such Act, and that it shall be framed so that it will not, either when passed, or at any future period, stand in the way of the public advantage. We believe, however, that a little consideration will serve to satisfy most persons that this important principle has, in the case of railways, and indeed of most descriptions of public works, been, in this country, all but wholly neglected.

The practice has been for a Railway Act to authorise the company in whose favour it is granted, to appropriate a certain line of road, fixing, at the same time, maximum rates of profit on the company's stock, and maximum rates of charge on the services to be performed by them. But overcharges are not the only evil to be guarded against; and if they were, experience has shown that the restrictions referred to are ill fitted to attain their object. A limitation of the rate of dividend tempts a prosperous company to engage in subsidiary undertakings of doubtful profit; and it further tempts them to countenance an extravagant system of management; to give, by underhand and indirect methods, unfair advantages to their proprietors; and, in short, to adopt every device by which they may retain the highest (or unnecessarily high) rates of charge without apparently raising their revenue above the sum required to defray the maximum rate of dividend. A limitation of the rates of charge is equally inexpedient and ineffectual. The rates are uniformly such as it is supposed will yield, when the railway is about to be constructed, an adequate return to the capital to be vested in it. But the fair presumption is, that the country will continue to increase in wealth and population for an indefinite period with the same rapidity that she has increased since the close of the American war; and if so, these rates will, in a few years, yield a profit or interest far beyond any that was in the contemplation of the parties when the work was entered upon. Now, it is plain, that in cases of this sort, there will be no means of abating the company's profits, or, which is the same thing, its charges against the public, except by constructing, at a vast expense, a new, and otherwise, perhaps, wholly unnecessary road. Hence the obvious expediency in passing Acts for the formation of railways and other public works of reserving power to government to make periodical revisions of the tolls or rates of charge for the services to be performed; to control their management in the view of providing for the greater security and accommodation of the public; and if needs be, to purchase up the concerns on reasonable terms.

The French have adopted the plan, in legislating for railways, of

fixing upon lines and rates of toll with plans for their construction, &c. ; such lines are then submitted to public competition, and assigned to those who offer to construct them and work them for the shortest lease or term, at the expiration of which they become the property of the public.

This plan is preferable, perhaps, in some respects, to that previously mentioned ; but here we have neither adopted the one system nor the other. And it is all but universally admitted, that our legislation, in regard to railways and public works, has hitherto evinced a highly culpable inattention to the public interests, and been discreditable to the intelligence of the country. Latterly, however, the extraordinary extension of railway projects has forcibly attracted the public attention to the subject ; and though many important lines have been, others still remain to be, conceded ; so that we may yet, by adopting a well-devised system, check abuse, and provide for the public interests in the lines that have to be granted ; and may, probably, also, be able to repair, in part at least, the errors already committed.

It has been objected to the above proposal that the reserving to the public of power to revise the charges on railways and other public works would be of no use, inasmuch as the parties would contrive so to swell their charges as to make their revenue appear not more than a fair return on their outlay. And such, most probably, would be the case, were the statements of the parties to be taken without examination. But who ever proposed that this should be done ? If charges are to be revised, government must be authorized to appoint parties to inquire carefully into the management of all concerns with which it is proposed to interfere ; and it would be the duty of such parties to proscribe every useless expense, and to ascertain how the railway could be carried on, supposing it were wrought under a system of open competition, and at the least expense, and to frame their report accordingly.

We do not even know that it is too late to interfere with existing railways, in some such way as has been here suggested. Suppose it were enacted that it should be lawful for government to revise the rates of charge, and to lay down new regulations for the government of all railways, 15 or 20 years hence, very little injury would be done to the existing interests of individuals, at the same time that provision would be made for securing those of the public. The fact that the rates of charge on the Birmingham and Great Western Railways were to be revised, and most probably reduced, in 1860 or 1866, would have little influence over the present value of shares in these concerns ; and such being the case, the proposed reduction could entail no real injury on the railway proprietors, inasmuch as those who may not choose to be subject to future revision may withdraw at present from the concerns, with little or no loss.

*Regulations for the Prevention of Accidents.*—Considering the great extent of railways in this country, and the vast number of passengers conveyed by them, the fewness of accidents is most remarkable. Indeed, their greater security appears to be nowise inferior to their greater speed. Still, however, this is a matter in which as little as possible should be left to accident or individual discretion ; and considering the immense number of persons frequently conveyed by a single train, and

the tremendous consequences that might ensue from a collision or other accident, we do think that a carefully drawn up code of regulations should be enacted with a view to secure the safety of travellers by railways; and that, should an accident occur, either through the neglect of such regulations or from not complying with their provisions, the offending parties should be subjected to penalties of a severe and stringent description. A government which neglects taking precautions of this sort, neglects one of its most important functions, and allows the lives of those whom it is bound to protect to be endangered or sacrificed by the cupidity, ignorance, or carelessness of the managers and servants (how incompetent soever they may be) of every railway association in the kingdom.

*Conveyance of Letters.*—The safe and speedy conveyance of letters by post is one of the greatest services rendered to the public by the formation of good roads. It does not really seem, though the contrary has been sometimes contended, that the business of the Post Office could be so well conducted by any one else as by government. The latter alone can enforce perfect regularity in all its subordinate departments; can carry it to the smallest villages, and even beyond the frontier; and can combine all its separate parts into one uniform system, on which the public may rely both for safety and dispatch.

The tolls imposed to defray the cost of constructing and repairing turnpike-roads, and the postage imposed on letters, are both unexceptionable taxes, provided they be restrained within moderate limits. It is but fair that those who travel along the roads, and those to whom letters are conveyed by post, should pay a reasonable sum for the accommodation that has thus been afforded to them. But oppressive tolls and postages obstruct that facility of communication and intercourse they are intended to promote, and are, in no ordinary degree, injurious. (See *post*, chapter on Revenue.)

4. CANALS.—In Great Britain, owing to the late rise of commerce and industry, and the insular situation of the country, no part of which is very distant from a navigable river, no attempt was made to construct canals till a comparatively recent period. Our first efforts for the improvement of internal navigation were directed to the deepening of rivers and removing the obstructions to their navigation. In 1635, a project was set on foot for rendering the Avon navigable from the Severn, near Tewkesbury, through the counties of Warwick, Worcester, and Gloucester. The civil war having broken out soon after, the project was abandoned, and does not seem to have been again revived. But after the Restoration, and during the earlier part of last century, acts were at different times obtained for deepening and improving river navigation. For the most part, however, these attempts were not very successful. The current of the rivers gradually changed the form of their channels; the dykes and other artificial constructions were apt to be destroyed by inundations; alluvial sand-banks were formed below the weirs; in summer the channels were frequently too dry to admit of being navigated, while, at other periods, the current was so strong as to render it quite impossible to ascend the rivers, which at all times, indeed, was a laborious and expensive undertaking. These difficulties in the way of river navigation seem to have suggested the

expediency of abandoning most rivers, and of digging parallel to them artificial channels, in which the water might be kept at the proper level by means of locks. The Act, passed in 1755, for improving the navigation of Sankey-brook, on the Mersey, gave rise to a lateral canal of this description, about eleven miles and a quarter in length, which deserves to be mentioned as the earliest effort of the sort in England.

But before this canal had been completed, the celebrated Duke of Bridgewater, and his still more celebrated engineer, the self-instructed James Brindley, had conceived a plan of internal navigation, independent altogether of natural channels, and intended to afford the greatest facilities to commerce, by carrying canals over rivers and through mountains, wherever it was practicable to construct them.

*English Canals.*—The Duke of Bridgewater was the owner of an estate at Worsley, about seven miles from Manchester, in which were valuable coal mines; but owing to the heavy cost of conveying the coal by land carriage to Manchester, the demand for it was comparatively limited. Under these circumstances, the Duke revived the idea that had been previously entertained of making Worsley brook navigable to the river Irwell, which was itself navigable to Manchester. But Brindley, who was fully aware of the superiority of canal navigation over that of almost any river, more especially of one so deficiently supplied with water as the Irwell, recommended his Grace to construct a canal from Worsley to Manchester, and to carry it on the same level all the way, by means of an aqueduct 39 feet high over the Irwell. The Duke having approved of this bold design, it was carried into effect, under the direction of Brindley, with wonderful skill and judgment, and the most perfect success. The canal was afterwards extended through Cheshire to Runcorn, at the bottom of the æstuary of the Mersey, and has ever since been, notwithstanding the competition of the railroad, the principal channel by which all sorts of heavy goods are conveyed between Liverpool and Manchester.

The opening of this canal was productive of vast advantage to the public, having immediately lowered the price of coal in Manchester to half its previous amount, and supplied a speedy, cheap, and regular channel of communication between that town and its port. It was happily, also, highly advantageous to its noble proprietor, who risked a large fortune on the enterprise.

The success that attended this project excited the public attention, in all parts of the empire, to the advantages that might be derived from such undertakings, and gave a wonderful stimulus to canal navigation. Brindley had early conceived the magnificent idea of joining the four great ports of Liverpool, Hull, Bristol, and London, by a system of grand canals, from which subsidiary canals might be carried to the contiguous towns; and though he died in 1772, at the premature age of 56, he had the satisfaction to see his projects considerably advanced towards completion.

The Grand Trunk Canal, or the canal intended to join the Trent and Mersey, the first link in this great chain, was planned by Brindley, and was partly constructed under his superintendence. It proceeds from the Duke of Bridgewater's Canal at Preston Brook, near

Runcorn, in a south-east direction, by Middlewich and Burslem, till near Lichfield, where it turns north-east, joining the Trent at Wilden Ferry, on the north-west angle of Leicestershire. It is  $93\frac{1}{2}$  miles in length. At Harecastle, on the confines of Cheshire and Staffordshire, it is carried under a pretty high hill by a tunnel 2,880 yards in length. This canal has been of vast advantage to the proprietors and the public. In the middle part, where smallest, it is 29 feet broad at top, 16 ditto at bottom, and  $4\frac{1}{2}$  ditto deep.

The Grand Trunk Canal has since been united, on the one hand, by the Birmingham and Fazeley, and the Birmingham and Worcester, canals, with the Severn at Worcester; and, on the other hand, the Coventry, Oxford, and Grand Junction canals, have united it with the Thames near Brentford,—completing the internal communication between the four great ports of the kingdom.

The navigation from the Mersey to the Humber, by the Grand Trunk Canal, is very circuitous and tedious. But other and shorter lines of internal navigation have since been opened between them, and which connect, in fact, all the great manufacturing towns of Lancashire and of the West Riding of Yorkshire with each other, and with the ports of Liverpool and Hull. The first constructed of these lines stretches, by a route 130 miles in length, from Liverpool, by Skipton, to Leeds, where it joins the Aire and Calder navigation. This canal was begun in 1770, and was the boldest and most magnificent project of the sort that had been then attempted. It took 46 years to complete, and cost in all about 1,200,000*l*. The original line, which had been approved by Brindley, was, in several instances, departed from in the course of the work. The depth of water is about 5 feet. Notwithstanding its vast expense, and the competition of other lines, it has become, contrary to what was long anticipated, a profitable project for the subscribers. More direct channels of communication, joining the Mersey and Humber, have since been carried across the great central ridge, or high grounds, between Lancashire and Yorkshire, by the Rochdale and Huddersfield canals. The summit level of the latter, at the tunnel where it is carried under Standege Hill, is  $656\frac{1}{2}$  feet above the level of the sea, being the highest elevation of any canal in the kingdom. The tunnel referred to is 5,451 yards, above 3 miles in length.

Exclusive of the communication, already noticed, between the Thames and Severn, these two rivers are directly united by three different lines of navigation. Of these, the most northerly is the navigation from Oxford to Lechlade, by the Isis; and from Lechlade to Stroud on the Severn, by the Thames and Severn Canal. The next, or middle navigation, is by the Wilts and Berkshire Canal, from Abingdon on the Thames to near Melksham, where it unites with the Kennet and Avon Canal, extending to Bath and Bristol. The last, or more southerly line, leaves the Thames at Reading. It consists partly of the river Kennet navigation, and partly of the Kennet and Avon Canal, now mentioned. This last is the most direct line of communication by water between London and Bristol, and is the channel by which most part of the bulky articles passing from the one to the other is conveyed. Owing, however, to the heavy cost of its construction, the Kennet and Avon Canal has not been profitable for the undertakers. It is 57 miles

in length; its summit level is 474 feet above high water mark, and it has a minimum depth of 5 feet water. Few canals exhibit so many specimens of aqueducts, tunnels, and deep cutting.

In addition to the above, an immense number of other canals have been constructed at different periods, some of which are of great magnitude and importance; so that England now enjoys an extent of canal navigation amounting in all to above 2,400 miles, and unparalleled in any other European country with the exception of Holland. Few of the English canals are above 7 or under 4 feet in depth. The Gloucester and Berkeley Canal is, however, 18 feet deep, and vessels of 400 tons are, consequently, enabled to reach Gloucester by its means.

All the English canals have been constructed, either by associations or individuals, under the authority of Acts of Parliament, which give power to levy certain rates on the passengers and goods conveyed by them. Unluckily, parliament did not reserve to itself the power to revise and alter these rates of charge; an oversight which has, in many instances, very seriously compromised the public interest.

Latterly, however, there has been, in consequence of the greater facilities of communication afforded by railways, a great decline in the value of most canals. Various projects are now, indeed, on foot for converting some of the principal lines into railways, or for making them subsidiary to, and dependent on, the latter.

*Scotch Canals.*—In Scotland, the great canal to join the Forth and Clyde was begun in 1768, but it was suspended in 1777, and was not resumed till after the close of the American war. It was finally completed in 1790. Its total length, including the collateral cuts to Glasgow and the Monkland Canal, is  $38\frac{1}{2}$  miles. Its summit level is 150 feet above the level of the sea. It is on a larger scale than most English canals. Its medium width at the surface is 56, and at the bottom 27 feet. Originally it was about 8 feet 6 inches deep; but recently its banks have been raised, so that the depth of water is now about 10 feet. It has, in all, 39 locks. In completing this canal many serious difficulties had to be encountered: these, however, were all successfully overcome; and, though unprofitable for a while, it has, for many years past, yielded a handsome return to its proprietors.

The Union Canal joins the Forth and Clyde Canal near Falkirk, and stretches thence to Edinburgh, being  $31\frac{1}{2}$  miles in length. It is 40 feet wide at the top, 20 at bottom, and 5 deep. It was completed in 1822; but has been, in all respects, a most unprofitable undertaking.

A canal intended to form a communication between Glasgow, Paisley, and Ardrossan, was commenced in 1807; but only that portion connecting Glasgow with Paisley and the village of Johnstown has hitherto been finished. This part is about 12 miles long; the canal being 30 feet broad at top, 18 at bottom, and  $4\frac{1}{2}$  deep. It was here that the experiments were made on quick travelling by canals, which demonstrated that it was quite practicable to impel a properly-constructed boat, carrying passengers and goods, along a canal at the rate of 9 or 10 miles an hour, without injury to the banks.

The Crinan Canal, across the peninsula of Cantire, is 9 miles long and 12 feet deep, admitting vessels of 160 tons burden. In 1837, 21,406 passengers were carried along this canal.

The Caledonian Canal is the greatest undertaking of the sort attempted in the empire. It stretches south-west and north-east across the island, from a point near Inverness to another near Fort William. It is chiefly formed by Loch Ness, Loch Oich, and Loch Lochy. The total length of the canal, including the lakes, is  $58\frac{1}{2}$  miles; but the excavated part is only  $21\frac{1}{2}$  miles. At the summit it is only 96½ feet above the level of the Western Ocean. It is mostly constructed upon a very grand scale, being intended to be 20 feet deep, 50 feet wide at bottom, and 122 at top; the locks are 20 feet deep, 172 in length, and 40 in breadth; and had it been wholly executed, as was originally intended, frigates of 32 guns, and merchant ships of 1,000 tons burden, might have passed through it. It was opened in 1822, being executed entirely at the expense of government, from the designs and under the superintendence of Thomas Telford, Esq. The entire cost has exceeded a million sterling. It would, however, appear to have been projected without due consideration, and promises to be a very unprofitable speculation; the tonnage dues and other revenues being generally insufficient to defray the ordinary expenditure. Owing, also, to a wish to lessen the original expense, and to hasten the opening of the canal, parts of it were not excavated to nearly their proper depth, while others were executed in a hurried and insufficient manner. Hence it is that the canal does not really admit vessels of above 250 or 300 tons burden; and but for the employment of steam-tugs on the lakes, which were not heard of when the work was undertaken, vessels might have been six weeks in making their passage from sea to sea! Under these circumstances we need not be surprised that it has been gravely debated whether it would not be better entirely to fill up and abandon the canal!

Some other canals have been projected and completed in different parts of Scotland. Of these the Don and Dee Canal, from Aberdeen to Inverury, is the most extensive; and the Monkland Canal, for the supply of Glasgow with coal, the most successful.

*Irish Canals.*—It is pithily observed by Mr. Young, that “*a history of public works in Ireland would be a history of jobs.*”<sup>\*</sup> The canals that have been constructed in that country seem completely to verify this caustic remark. Immense sums of money have been lavished upon them to very little purpose, except the enriching of contractors: and it is not easy to say whether the ignorance displayed by the greater number of the projectors, the waste of public money by which they have been for the most part characterised, or their inutility, be their most prominent features.

*Grand Canal.*—This, which is the most important of the Irish canals, was begun in 1756. The works have, however, been frequently interrupted; and it was not extended to Ballinasloe till 1829. It was undertaken by a body of subscribers, incorporated for the purpose; but they could not have completed the canal without liberal grants from the public. It commences at Dublin, and stretches in a westerly direction, inclining a little to the south, to the Shannon, with which it unites near Banagher, a distance of about 86 statute miles. But exclusive of the main trunk, there is a branch to Athy, where it joins the

<sup>\*</sup> *Tour in Ireland*, part ii. p. 66, 4to. ed.

Barrow, a distance of about 28 miles; and there are branches to Port-arlington, Mount Mellick, and some other places. The westerly branch, from the Shannon to Ballinasloe, is about 14 miles in length. At its highest elevation, the canal is 278 feet above the level of the sea at Dublin; it is 40 feet wide at the surface, from 24 to 26 feet wide at bottom, and has 6 feet water. The locks on the trunk of the canal are 70 feet long, and  $14\frac{1}{2}$  wide. Including the main body of the canal, its extension from Shannon harbour to Ballinasloe, and its various branches, its total length is 164 English miles. A considerable part of its course is through the Bog of Allen, a circumstance which added greatly to the expense of its construction. The sums expended upon the Grand Canal, down to 1823, amounted, according to the statement by Messrs. Henry, Mullins, and M'Mahon, to 1,861,000*l.*; and its subsequent extension from the Shannon to Ballinasloe, with the branch to Mount Mellick, have most probably carried its total cost to considerably above 2,000,000*l.*

Two capital errors seem to have been committed in the formation of this canal, it was framed on too large a scale, and was carried too far north. Had the canal had only 4 or  $4\frac{1}{2}$ , instead of 6 feet water, its expense would have been "vastly lessened," while its efficiency would not have been, in any considerable degree, impaired. But the great error was in its direction. Instead of joining the Shannon about 15 miles above Lough Derg, it should have joined it below Limerick. The advantages of this would have been threefold: 1st, it would have enabled barges bound for or leaving Limerick to avoid the difficult and dangerous navigation of the Shannon; 2nd, it would have run through a comparatively fertile country, to whose products it would have afforded advantageous outlets; and, 3rd, it would have avoided the Bog of Allen, in which, says Mr. Wakefield, "the company have buried more money than would have cut a spacious canal from Dublin to Limerick."—(Vol. i. p. 642.) Its principal use is to facilitate the conveyance of turf, grain, and other produce, to Dublin: but an immense number of passengers are also conveyed by it. In a mercantile point of view, it has been, and is a most unprofitable concern; though there can be no doubt that it has contributed materially to promote commerce and internal improvement, particularly since the extension of its branches to Athy and Mount Mellick.

*Royal Canal.*—This canal was begun in 1789. It stretches westward from Dublin to the Shannon, which it joins at Tormanbury. Its entire length is 92 miles; its highest elevation is 322 feet above the level of the sea. At bottom it is 24 feet wide, having 6 feet water. The locks are 81 feet long and 14 feet wide. It cost, exclusive of interest on stock, loans, &c., advanced by government, 1,421,954*l.*

The Royal Canal is, if possible, far more injudiciously planned than the Grand Canal. It has the same defect of being extravagantly large; and throughout most part of its course it is nearly parallel to the former, from which, indeed, it is but a short way distant. There are, consequently, two immense canals, where there ought, perhaps, to be none! At all events, it is certain that *one* canal, of comparatively moderate dimensions, would have been quite enough for all the business of the district, though it were much greater than it is at present,

or than it is ever likely to become. The immense sum expended on the Royal Canal has really, therefore, been little better than thrown away. We may add that this canal has become, under a late Act, the property of the Midland Great Western Railway Company of Ireland.

*Shannon Navigation.*—So early as 1767 a company was formed for improving the navigation of the Shannon, between Limerick and Killybeg, at the south end of Lough Derg. The distance is about 15 miles; it is called the Limerick Navigation, and is partly a canal, and partly a river navigation.

Exclusive of the above, a very large sum has been expended in improving the navigation of the Shannon between Portumna and Athlone; but it is still defective. During floods the channel is not discernible, from the great rise of the water, and the lowness of the river's banks; and in dry seasons the inconvenience of the opposite extreme is felt, there not being in many places more than two feet depth of water. Latterly, however, the navigation has been materially improved. The works throughout the river are now placed under the control of Commissioners appointed under the 2 and 3 Vict., c. 61.

*River Barrow Navigation.*—It has been attempted, partly by collateral cuts, and partly by deepening the river, to make the Barrow navigable for barges to Athy, where it is joined by a branch of the Grand Canal. On this undertaking 255,500*l.* have been expended. It has been but indifferently successful. "The very imperfect state of the navigation, the defectiveness of the works, *both as to execution and design* (those only projected by Mr. Chapman excepted), must consume in their maintenance and repair the greater portion of any revenue arising therefrom, leaving a mere nominal remuneration to the subscribers, who have made great sacrifices, although ill-directed, for the improvement of the country, and the amelioration of the working classes of the people."—(*Report by Messrs. Henry, Mullins, and M'Mahon.*)

*River Boyne Navigation.*—This, like the Barrow Navigation, consists partly of collateral cuts, and partly of excavations in the bed of the river.

*The Newry Navigation* extends from the sea lock at Fathom to Lough Neagh, a distance of 24 Irish, or 30 $\frac{1}{2}$  English miles, 12 of which are in the bed of the Upper Bann river. It was begun so early as 1739. Its highest elevation is 65 feet above the level of the sea, and 22 feet above Lough Neagh. It has been wholly executed at the public expense; and has cost, including the Tyrone and Mahery cut, connecting Coal Island with the Blackwater and Lough Neagh, 75,730*l.* in improvements and repairs only, since 1800. "The summit level is badly supplied in dry seasons, and the navigation in other respects is very defective, particularly that part of it which is carried in the bed of the river Bann; being subject to the impediments and interruptions inseparable from river navigation. The course of the river Bann is meandering and circuitous; its banks are low and marshy, topped even by ordinary floods, during which the channel ceases to be distinguishable, when the navigation is, in consequence, suspended. Some of these inconveniences might be obviated by erecting beacons in the line

of the channel, which, if properly marked, could be navigated in flood time, from the sluggishness of the current."—(*Report by Messrs. Henry, Mullins, and M<sup>c</sup>Mahon.*)

*Lagan Navigation* is partly a river, and partly a still-water navigation. It is completed from Lough Neagh to Belfast, and is about 22 Irish, or 28½ English miles in length. The summit level is 112½ feet above the sea. The highest level is badly supplied with water, the navigation is much interrupted in dry seasons, and is otherwise very defective. It is almost needless to add that the concern has been unprofitable.

5. SHIPPING.—Of the various instruments by which foreign commerce is carried on, ships, to an insular nation like Great Britain, are, perhaps, the most important of any. Owing to various circumstances, the investigation of which is foreign to the object of this work, the shipping of England did not become considerable till the reign of Elizabeth. It gradually increased under her successors, James I. and Charles I. At the Restoration, the British shipping cleared outwards amounted to 95,266 tons; but such was the increase of navigation during the reigns of Charles II. and James II., that, at the revolution, the British shipping cleared outwards amounted to 190,533 tons. The war, terminated by the treaty of Ryswick in 1697, checked this progress. But commerce and navigation have steadily advanced, with the exception of two short periods, during the war of 1739 and the American war, from the beginning of last century down to the present day.

The first really authentic account of the commercial navy of England was obtained in 1701-2, from returns to circular letters of the Commissioners of Customs, issued in January of that year. From these it appears that there then belonged to *all* the ports of England and Wales 3,281 vessels, measuring (or rather supposed to measure) 261,222 tons, and carrying 27,196 men. Of these there belonged to London 560 vessels, of the burden of 84,882 tons, having a crew of 10,065 men. Bristol was the next port to London, but it had only 2,359 seamen. — (*Macpherson's Annals of Commerce*, anno 1701.)

During the next 30 years, the shipping belonging to London was more than doubled; for, in 1732, it possessed 1,417 vessels, measuring 178,557 tons, and navigated by 21,797 men. The shipping of Liverpool and some other ports had, in the same interval, increased still more rapidly. — (*Macpherson*, anno 1732.)

It appears from a custom-house account, that, in 1760, there belonged to England and Wales 6,105 vessels, of the reputed burden of 433,922 tons; and to Scotland 976 vessels, of the reputed burden of 52,818 tons. But a note subjoined, by the assistant registrar-general of shipping, to this account, shows that it is very defective, both as to the number of vessels and their burden. So much so is this the case, that the real tonnage at the period referred to, is believed, on good grounds, to have exceeded by full 50 per cent. the amount stated above. — (*Macpherson*, anno 1760.)

The increase of commerce and shipping, since 1760, has been quite

extraordinary. On the 30th of September, 1800, the amount of the registered shipping belonging to the different ports of the empire was as under:—

| Countries.            | Vessels. | Tons.     | Men.    |
|-----------------------|----------|-----------|---------|
| England . . . .       | 12,198   | 1,466,632 | 105,037 |
| Scotland . . . .      | 2,155    | 161,511   | 13,883  |
| Ireland . . . .       | 1,003    | 54,262    | 5,657   |
| Guernsey and Jersey . | 130      | 10,647    | 1,412   |
| Man . . . .           | 238      | 5,463     | 1,285   |
| Colonies . . . .      | 2,161    | 157,364   | 12,047  |
| Totals . . . .        | 17,885   | 1,855,879 | 138,721 |

The subjoined account shows the amount of our mercantile navy in 1852, with its distribution among the different ports of the United Kingdom.

*An Account of the Number and Tonnage of the Sailing and of the Steam Vessels Registered at each of the Ports of England, Scotland, and Ireland, the Isle of Man, and Channel Islands, distinguishing between those under and those above Fifty Tons Register, on the 31st December, 1852.*

|                      | SAILING VESSELS. |       |                |        | STEAM VESSELS. |       |                |       |
|----------------------|------------------|-------|----------------|--------|----------------|-------|----------------|-------|
|                      | Under 50 Tons.   |       | Above 50 Tons. |        | Under 50 Tons. |       | Above 50 Tons. |       |
|                      | Vessels.         | Tons. | Vessels.       | Tons.  | Vessels.       | Tons. | Vessels.       | Tons. |
| <b>ENGLAND.</b>      |                  |       |                |        |                |       |                |       |
| Aberystwith . . . .  | 120              | 3,947 | 119            | 11,271 | ..             | ..    | ..             | ..    |
| Arundel . . . .      | 19               | 670   | 36             | 5,111  | ..             | ..    | ..             | ..    |
| Barnstaple . . . .   | 56               | 2,140 | 28             | 2,679  | ..             | ..    | ..             | ..    |
| Beaumaris . . . .    | 135              | 4,132 | 118            | 16,870 | ..             | ..    | ..             | ..    |
| Berwick . . . .      | 27               | 901   | 31             | 3,228  | ..             | ..    | 1              | 219   |
| Bideford . . . .     | 63               | 2,101 | 78             | 8,730  | ..             | ..    | 1              | 74    |
| Boston . . . .       | 115              | 4,313 | 54             | 3,639  | 1              | 18    | ..             | ..    |
| Bridgwater . . . .   | 54               | 2,021 | 68             | 10,148 | 2              | 31    | ..             | ..    |

*Ship Building.*—The cost, including the outfit, of the ships built in the United Kingdom in 1852, may, we believe, be taken, at a rough average, at from 12*l.* to 14*l.* per ton, or 13*l.* at a medium, making their total value 1,983,319*l.* London, Sunderland, Newcastle, Liverpool, Hull, Yarmouth, &c., are the principal building ports. The business has increased with extraordinary rapidity at Sunderland: so much so that while only 60 ships, of the burden of 7,560 tons, were built in that port in 1820, no fewer than 146 ships, of the burden of 51,823 tons, were built in it in 1851. Ships built in London, Liverpool, Bristol, and other western ports are, however, in higher estimation than those built in the Tyne and the Wear, at least for those branches of Trade where the best ships are required.

Within the last dozen years the building of iron steam ships has been immensely extended on the Tyne and the Clyde, especially the latter, which has become the grand seat of this branch of industry. According to a statement published by Dr. Strang, the well-informed chamberlain of the city of Glasgow, it appears that during the 7 years ending with 1852, no fewer than 247 steam-vessels had been built on the Clyde, of which 14 only had wooden hulls, the others being of iron. The burden of the wooden steamers amounted to 18,331 tons, and that of the iron steamers to 129,273 tons. Dr. Strang estimates that 10,820 persons are constantly employed on the Clyde in the construction and repair of steam-vessels and their machinery. Sailing vessels are now, also, very frequently constructed of iron.

*Classification of Ships.*—Until very recently ships, how much soever they might differ in other respects, were classified at Lloyd's

with reference solely to their age and the place where they were built. Thus, supposing two ships were launched about the same time in the Thames, the Wear, or anywhere else, they were enrolled together in the *highest* class in Lloyd's Register, and stood there for a certain number of years, how different soever they might have originally been, or how different soever they might afterwards become! And underwriters and merchants, seeing them thus standing together, and having no other test of goodness to which to refer, insured and employed the one on the same terms as the other! It is unnecessary to dwell on the preposterous absurdity of such a system. Practically it operated as a high bounty on the building of defective, or what are called *slop-built*, ships; and there cannot be a doubt that it tended materially to depreciate the character of our mercantile marine, and to multiply shipwrecks, which have increased to a frightful extent. We are, therefore, glad to have to state that a new system of classification is now in the course of being introduced, by which the place of ships on the register will be made to depend, not on their age, or the place where they were built, but upon their actual condition.—(For full details as to the old and new system of classification, see *Commercial Dictionary*, Art. SHIPS.)

*Numbers, &c., of Persons engaged in Manufactures and Trade in 1841.*

We have already given detailed estimates, formed from the best accessible materials, of the number of people employed in the principal manufactures and trades. The following tables embrace most part of the information to be found in the late census in reference to that subject. We have already stated our reasons for thinking that the number of people employed in agriculture is underrated, and that of those employed in manufactures proportionally overrated in these tables.

II. *Abstract distinguishing the Numbers (with the Age and Sex) of Persons engaged in Commerce and Trade, and those engaged in Manufacture in Great Britain in 1841.*

|                                                                  | COMMERCE AND TRADE.          |                        |                              |                        |           | MANUFACTURE.                 |                        |                              |                        |         |

In Ireland out of a total population of 8,173,966, as returned by the census of 1841, 1,953,683 were engaged in and dependent upon manufactures and trade. At the same time 5,406,743 were engaged in and dependent upon agriculture, and 813,535 upon other professions and pursuits.

## PART IV.

## CONSTITUTION AND GOVERNMENT, CIVIL AND RELIGIOUS, OF THE BRITISH EMPIRE.

## CHAPTER I.—SKETCH OF THE RISE AND PROGRESS OF THE ENGLISH CONSTITUTION.

THE functions of every civil government are of a twofold description, internal and external. In the performance of the first, it makes laws for those subject to its authority, provides for the observance of these laws, and conducts the public business of the state. In the performance of the second it represents the community, as an aggregate body, in its intercourse with other communities, and acts as its authorized organ of communication in all international transactions. The means by, and the mode in, which these objects are attained determine the character or form of government. In the English, which is usually styled a mixed form, the legislative power is kept distinct from the executive, the latter being vested in the King alone; while the legislative power is vested in the great national council termed the Parliament, composed of the King and the three estates of the realm, that is, of the King, and the Lords Spiritual, the Lords Temporal, and the Commons.\* The King is supreme; his office is hereditary; and all new laws purport to be enacted by him, with the consent of the two Houses. The Lords Spiritual and Temporal consist of the prelates and peers of the realm. The Commons consist of representatives chosen by that portion of the people invested with the elective franchise, partly for counties, and partly for cities and boroughs, at the commencement of every parliament, and retaining their seats for that parliament only. The Lords form one House, and sit by themselves; the Commons form another, in which they also sit by themselves. The King sits with the Lords; but he occupies his seat only on formal occasions, as when he opens the session, or gives his assent to Bills which have passed the two Houses. According to established practice, he cannot be present at any deliberation, nor is he supposed to be acquainted with what passes, either in the Lords or in the Commons, until it be officially communicated to him. No law can be made, and no tax imposed, without the assent of Parliament, that is, of the King and of the Houses of Lords and Commons; this assent being given by each separately. The King has no deliberative, but merely a negative voice; and no measure can originate with him, unless it be an act of grace. The two Houses may indiscriminately originate all measures, with the exception of Bills affecting the rights of the peerage, or containing any grant of money; the former of which must be always introduced in the House of Lords, and the latter in the House of Commons; and in neither case is any Bill so introduced into one House permitted to undergo any alteration in the other. Parliament is called together by the King, who may prorogue or dissolve it at pleasure. He must, however, call it together "once, at least, in every year, or

\* The King is not one of the three estates, see *Hale's Jurisdiction of Lords*, p. 10.

In Ireland out of a total population of 8,173,966, as returned by the census of 1841, 1,953,683 were engaged in and dependent upon manufactures and trade. At the same time 5,406,743 were engaged in and dependent upon agriculture, and 813,535 upon other professions and pursuits.

## PART IV.

## CONSTITUTION AND GOVERNMENT, CIVIL AND RELIGIOUS, OF THE BRITISH EMPIRE.

## CHAPTER I.—SKETCH OF THE RISE AND PROGRESS OF THE ENGLISH CONSTITUTION.

THE functions of every civil government are of a twofold description, internal and external. In the performance of the first, it makes laws for those subject to its authority, provides for the observance of these laws, and conducts the public business of the state. In the performance of the second it represents the community, as an aggregate body, in its intercourse with other communities, and acts as its authorized organ of communication in all international transactions. The means by, and the mode in, which these objects are attained determine the character or form of government. In the English, which is usually styled a mixed form, the legislative power is kept distinct from the executive, the latter being vested in the King alone; while the legislative power is vested in the great national council termed the Parliament, composed of the King and the three estates of the realm, that is, of the King, and the Lords Spiritual, the Lords Temporal, and the Commons.\* The King is supreme; his office is hereditary; and all new laws purport to be enacted by him, with the consent of the two Houses. The Lords Spiritual and Temporal consist of the prelates and peers of the realm. The Commons consist of representatives chosen by that portion of the people invested with the elective franchise, partly for counties, and partly for cities and boroughs, at the commencement of every parliament, and retaining their seats for that parliament only. The Lords form one House, and sit by themselves; the Commons form another, in which they also sit by themselves. The King sits with the Lords; but he occupies his seat only on formal occasions, as when he opens the session, or gives his assent to Bills which have passed the two Houses. According to established practice, he cannot be present at any deliberation, nor is he supposed to be acquainted with what passes, either in the Lords or in the Commons, until it be officially communicated to him. No law can be made, and no tax imposed, without the assent of Parliament, that is, of the King and of the Houses of Lords and Commons; this assent being given by each separately. The King has no deliberative, but merely a negative voice; and no measure can originate with him, unless it be an act of grace. The two Houses may indiscriminately originate all measures, with the exception of Bills affecting the rights of the peerage, or containing any grant of money; the former of which must be always introduced in the House of Lords, and the latter in the House of Commons; and in neither case is any Bill so introduced into one House permitted to undergo any alteration in the other. Parliament is called together by the King, who may prorogue or dissolve it at pleasure. He must, however, call it together "once, at least, in every year, or

\* The King is not one of the three estates, see *Hale's Jurisdiction of Lords*, p. 10.

in their newly acquired possessions. In this view the entire lands of a province, or country, were supposed to belong to the chief or king of the conquering tribe, and were assigned, or supposed to be assigned, by him to their occupiers, in consideration of their performing certain services of a military nature. To the performance of these every one bound himself by an oath, taken on being admitted into possession of his fief or estate. If he failed in his duties, his lands were forfeited, and reverted to the crown. The king was termed lord paramount, his tenants barons, crown vassals, and tenants *in capite*, and their lands feuds or fiefs. The king's immediate tenants again divided their lands to other subtenants, who entered into similar engagements with their lords, and held of them upon the same terms by which they themselves held of the king. The obligations between the lord and vassal were mutual; it being as much the duty of the lord to protect his vassal, as of the vassal to do fealty and service to his lord. The services to be performed by the military tenant were not left to the lord's caprice; every thing was fixed and ascertained; and nothing could be legally required from the vassal, without his own consent, beyond the duties specified in the terms of his tenure. A system of this sort, though liable to the greatest abuse, combined, in its principle, subordination with independence; and was not ill-suited to the period when it was introduced. It provided for the defence and security of the State by converting all landlords and their vassals into a permanent militia, paid and maintained by the lands they held. Courts were held by the feudal lords on their fiefs or manors, at which their tenants attended, and there all disputes and complaints respecting the lands of the manor, and other questions litigated between tenant and tenant were determined. The by-laws and local usages within the manor or district were declared and enforced at these courts, and matters of common concern were regulated by common consent. The lord presided either in person, or by his seneschal or steward; the tenants and free suitors of the manor being the peers, or *pares Curie*, who adjudicated both upon law and fact. Inasmuch, however, as the proceedings in these courts, from the overpowering influence of the lords, would be very apt occasionally to degenerate into injustice, their awards were not final; and appeals, on complaint of a defect of justice, might be made from them by writs of right to the county courts, established in the Anglo-Saxon period. Suits, also, were frequently transferred from manor courts to county courts, on complaint of the vassals that their lords demanded a greater amount of service than was due under their tenures. And in some instances cases were brought from the county courts to the King's court, or *Aula Regis*, to be decided by his justiciaries.\* But the vice of the system was, that when the courts did justice, which was not always the case, to those who appealed to them, the lords were mostly too powerful to pay much or any attention to their decisions.

Under the Norman dynasty, the Great Council, or Court of Parliament, has been supposed by some constitutional writers to have been originally a court, similar in its constitution to the baronial courts now referred to, convoked by the king as paramount feudal lord, and attended

\* *Lyttelton's Hist., Henry II.,* v. 313, 8vo. ed.

of right by his immediate tenants, who were termed barons; the collective body of such tenants forming the baronage or peerage of the realm, from which the present House of Lords derives its descent and its judicial character.

Without stopping to investigate the correctness of this view of the rise of the legislature, it may be safely affirmed, that whatever modifications the parliament may have undergone under the influence of feudal institutions, its origin is not purely feudal, and that it derives some portion of its popular and representative character from its early connexion with the county courts of the Anglo-Saxon period. It is a remark of Hume, sanctioned by Hallam, "that the institution of county courts has had greater effects on the government of England than have yet been accurately pointed out by historians, or traced by antiquaries."

In the further prosecution of our design, we shall, for greater convenience, divide this sketch into three parts: the first, comprising the development of the constitution, will embrace the period from the Conquest to the close of the wars of the Houses of York and Lancaster, at the accession of Henry VII., when the government seems to have nearly attained its present form; the second will embrace the interval between that epoch and the Revolution; and the last will bring us thence down to the present time.

I. The Conqueror and the first princes of the Norman line appear to have met with little opposition, in carrying on the government, from the interference of the Great Council. The assent of the latter was required to pass laws; but the care of the administration being left, without check of any kind, to the monarch, who was frequently involved in war and almost always necessitous, abuses of every sort, including a venal and corrupt administration of justice, were multiplied on all hands. Occasionally, however, the nobles and the community in general were awakened to a sense of these abuses; and charters were obtained from Henry I., and other sovereigns, modifying some of the hardships growing out of the feudal system, and promising to revive the old laws of Edward the Confessor. "What these laws were, or more properly, perhaps, these customs subsisting in the Confessor's age, was not very distinctly understood. So far, however, was clear, that the rigorous feudal servitudes, the weighty tributes upon poorer freemen, had never prevailed before the Conquest. In claiming the laws of Edward the Confessor, our ancestors meant but the redress of grievances, which tradition told them had not always existed."—(Hallam, *Middle Ages*, iii., 444.)

The reign of Henry II., the first sovereign of the House of Plantagenet, who ascended the throne in 1154, is one of the most important in our earlier annals. In it the lower orders, especially the inhabitants of cities and towns, increased considerably in wealth and importance, and the distinction between Englishman and Norman was well nigh obliterated. To facilitate the administration of justice, and to provide for the care of the royal demesnes and revenues arising out of the feudal system, Henry divided the kingdom into six circuits, and instituted the justices in eyre (*in itinere*), commissioned to administer justice, and to try writs of assize in the several counties. He, also, discouraged the barbarous practice of trying cases by battle, and by the

ordeals of fire and water ; and permitted the defendant to claim to have the case decided by a grand assize or peculiar description of jury. In this reign, too, it began to be customary to commute the military services, due under the feudal tenures, for a money payment (*escuage*) ; a change which led in the first place to the introduction of subsidies and taxes, and thereby eventually contributed to raise the Commons to the highest importance.—(*Blackstone*, iv. 422 ; *Hume*, i. 441—450 ; *Stephens*, *Rise and Progress*, i. 46, &c.)

Richard I., who succeeded Henry, engaged with the greatest ardour in the crusades. Among other devices for raising the sums required to meet his exigencies, he made grants of immunities and of portions of the demesnes of the Crown to cities and boroughs in return for loans of money ; and as he followed a similar policy by means of sales, re-grants of land from the Crown in smaller parcels, &c., in all parts of the country, the popular influence was, consequently, in some degree increased. On the death of Richard, in 1199, the rapacity and oppressions of his successor, John, a prince without either talent or valour, afforded to the nobles and people a favourable opportunity, of which they did not fail to profit, of reforming abuses and of establishing the public liberties on a broader and more solid basis. This was effected by the concession of *MAGNA CHARTA*, or the Great Charter, extorted by the confederated barons from the king, and signed by him at Runnymede on the 15th of June, 1215.

"It has been lately," says Mr. Hallam, "the fashion to depreciate the value of *Magna Charta*, as if it had sprung from the private ambition of a few selfish barons, and redressed only some feudal abuses. It is, indeed, of little importance by what motives those who obtained it were guided. The real characters of men most distinguished in the transactions of that time are not easily determined at present. Yet if we bring these ungrateful suspicions to the test, they prove destitute of all reasonable foundation. An equal distribution of rights to all classes of freemen forms the peculiar beauty of the charter. In this just solicitude for the people, and in the moderation which infringed on no essential prerogative of the monarchy, we may perceive a liberality and patriotism very unlike the selfishness which is sometimes rashly imputed to those ancient barons. And, as far as we are guided by historical testimony, two great men, the pillars of our church and state, may be considered as entitled, beyond the rest, to the glory of this monument ; Stephen Langton, Archbishop of Canterbury, and William, Earl of Pembroke. To their temperate zeal for a legal government, England was indebted during that critical period for the two greatest blessings that patriotic statesmen could confer ; the establishment of civil liberty upon an immovable basis, and the preservation of national independence under the ancient line of sovereigns, which rasher men were about to exchange for the dominion of France."—(*Middle Ages*, ii., 447.)

Though principally directed against the abuses of the king's power, as feudal lord, the Great Charter contains principles of universal application, which give it great weight and authority, even at the present day, in matters of constitutional law. In it we find the seeds of many of our most valued institutions ; and great constitutional questions have

seldom been discussed, in after times, without an appeal being made to its provisions in support of the liberty of the subject. The 46th and 47th clauses are most important. They declare that—"No free-man shall be taken, or imprisoned, or disseized, or out-lawed, or banished, or anyways destroyed; nor will we pass upon him, or commit him to prison, unless by the legal judgment of his peers, or by the Law of the Land.

"We will sell to no man, we will not deny nor delay to any man right or justice."

These clauses, had they been honestly acted upon by the courts, would have secured to the nation the blessing of speedy and impartial justice. They undoubtedly embody the principle of trial by jury and of the writ of Habeas Corpus.

But, in a constitutional point of view, the 14th clause is, perhaps, the most important:—"No scutage or aid shall be imposed in our kingdom, (beyond the ordinary liabilities of the feudal tenure,) unless by the common council of our kingdom." And in the 17th and 18th clauses, the king engages to summon to the Great Council, 40 days, at least, before the meeting thereof, the archbishops, bishops, abbots, earls, and great barons of the realm, and all others holding in chief of the crown.\*

This is a distinct recognition and establishment of the great principle, that the nation should not be taxed but by its own consent; and it only required time, and a course of events which were even then in progress, to raise the Commons to sufficient importance to bring them within the operation of this clause. It is not to be supposed, however, that the provisions in this and other charters were well observed: indeed, the frequent demands for their confirmation attest the habitual disregard with which they were treated; and the generality of the terms in which they were expressed afforded a pretext for violating their spirit. They served, however, to keep alive, in the minds of the people, a knowledge of their rights and liberties, even at times when they were unable to enforce them; and afterwards, when they acquired this ability, they were of the last importance, being solemn documents, not to be denied or disputed, in which the prerogatives of the crown and the rights of the subject were deliberately ascertained and agreed upon.

The tenor of the writs issued in pursuance of the clauses to that effect in *Magna Charta*, indicates the class of persons who were then the legitimate members of the parliament. By the greater barons, nothing more, it is probable, was meant than those that were most powerful; and a personal summons might be intended only as a mark of greater respect; unless, indeed, the distinction rested on some unknown feudal principle. All who held their lands immediately of the crown were deemed to have an equal right to a seat. But in succeeding reigns this practice was altered, and such only as were actually summoned were permitted to attend; whence originated the mode of creating peers by writ of summons. It has been contended that the representatives of boroughs and cities were admitted to participate in

\* See the Great Charter, and the translation thereof in *Rapin's England*, i. 285, ed. 1732.

the deliberations of the council soon after the passing of the Great Charter; but this is a very questionable proposition. The king, it has been observed, had no motive to summon burgesses for the purpose of obtaining grants of money from the towns, as long as the practice prevailed (which was not entirely abandoned till the reign of Edward II.) of negotiating with them for supplies on the footing of free gifts. We learn from the records of the Exchequer, that during part of the 12th and 13th centuries, the contributions of citizens, burgesses, and tenants in ancient demesne, in the form of aids and talliages, were obtained from each city or borough separately, by the solicitation of the justices on circuits, or of special commissioners employed for that purpose. In many instances, too, the boroughs, being the demesne land of some feudal superior, would be taxed through the medium of their lord, who was authorized, by law, to make his tenants contribute to the aid he had himself agreed to give. It is, however, extremely probable that burgesses were summoned to parliament previously to 1265;\* but there is no conclusive evidence to show, that such was really the case till the epoch now mentioned, in the reign of Henry III., when Simon de Montfort, Earl of Leicester, the leader of one of the contending parties then in the field, issued writs, directing the election and return of two knights for each county; of two citizens for each city; and of two burgesses for every borough. The earliest writs to summon the citizens and burgesses were directed, not to the sheriffs, but to the cities and boroughs themselves. In the reign of Edward I. a different method was introduced, the writs being then usually addressed to the sheriffs, who were directed, in general terms, to make returns from "every city and borough within their bailiwicks;" and such is the form in which the writs are still issued.—(See *post.*) The question, by what class of electors were the members for the cities and towns returned? is involved in the greatest obscurity: but at all events, no qualification seems to have been necessary for the representatives. With regard to the electors of knights of the shire, there is good ground for believing that, even before the statute 7 Hen. IV. c. 15, the election was made in the full county court by its suitors, and that these suitors comprised not only the tenants in chief of the crown, but also the freeholders of mesne lords. After the parliament of De Montfort, no mention is made of the Commons until the subsequent reign of Edward I., the Acts in the beginning of which are said to be passed with the consent of the "commonalty;" and, for the first time, we find the king, on issuing a charter, confirming the previous charters (5th November, 1297), acknowledging the "commonalty" as an estate of the realm, and granting to them, for himself and his heirs, that "no aids, scutages, or prizes, should be taken thenceforth but by the common assent of the realm, and for the common profit thereof." At a subsequent period of the same year (25 Edward I.), this was further confirmed by the famous statute "*De tallagio non concedendo*," which enacts, "that no talliage or aid shall be taken without the goodwill and assent of the archbishops, bishops, earls, barons, knights, *burgesses*, and other freemen of the land." Henceforward the Commons appear to have been pretty regularly summoned during the reign of

\* See *Lyttelton's Hist. of Henry II.*, vol. iii., pp. 216-234, 8vo. ed.

Edward I.—(Stephens, *Rise and Progress of the English Constitution*, i. 98.)

It is unnecessary to specify in this place the various improvements made by this monarch in the judicial polity of the country, as we shall afterwards have occasion to mention them when treating of the judicial system. It should be noticed, however, that the abolition of the practice of subinfeudation in this reign, gave a fatal blow to the feudal system, and has probably had an important influence over the constitution. Previously to this, every landowner had it in his power, by partial alienations of his lands, to create a feudal tenantry around him, subject to the military obligations and civil duties incidental to the relation of lord and vassal. But, by the 18th of Edward I., commonly called the statute of *Quia emptores*, it was enacted, that on every alienation, the alienee should be considered as holding, not of his immediate grantor, but of the same lord and upon the same terms as the grantor himself had held. The professed, and perhaps the real, intention of the statute was, to save the rights of the lords. In its inevitable tendency and result, it destroyed subordinate vassalage, and impaired the strength and perpetuity of the feudal system. In conjunction with other causes it put a stop to the erection of seigniorial jurisdictions; and, thenceforth, the presumption was, and still is, that lands are held immediately of the king, and not of any intermediate feudal superior.

It has been the prevalent opinion that at the first admission of the Commons to Parliament they sat in the same house with the Lords, and voted with them; and that it was not for some considerable time thereafter that the Commons assembled by themselves and deliberated apart from the Lords. Most probably, however, they always did this. The grand, or rather sole, object the king had in view in summoning the Commons was to get their assent to taxes or subsidies to be imposed on their own order, the redress of grievances being very frequently the price paid for such assent; and as there was, in those days, almost always a difference in the proportional magnitude of the subsidies or taxes imposed on the property of the barons, and of those imposed on the property of the Commons, the presumption seems to be that each order taxed itself, and consequently that each deliberated apart from the other.—(Hallam, *Middle Ages*, iii., 54.) But, whether they were so from the outset, the two Houses were certainly separated as early as the reign of Edward II.; and the knights of the shire, who were originally a species of lesser barons, were then, also, associated, as part of the Commons, with the citizens and burgesses. This division into two distinct houses has served to distinguish the English parliament from similar assemblies in other parts of Europe, and has powerfully contributed to give weight and importance to the popular branch of the legislature. In this reign, the Acts were, for the first time, headed with the present formula, and are stated to be passed “with the assent of the prelates, earls, barons, and commonalty of the realm in parliament assembled.” A statute of the 15th of Edward II. (1322) declares that “the matters to be established for the estate of the king, and of his heirs, and for the estate of the realm and of the people, should be treated, accorded, and established in parliament by the king,

and by the assent of the prelates, earls, and barons, and the commonalty of the realm, according as had been before accustomed." And this statute, as Mr. Hallam has remarked, not only establishes, by a legislative declaration, the present organization of parliament, but shows that it had existed for some length of time.\* Under Edward III., the constitution was still more fully developed; the power of the Commons was so much increased, that the Black Prince and the Earl of March, were glad to avail themselves of their assistance in attacking an unpopular and obnoxious ministry; and at this period, also, the laws began to assume that special and detailed character, required to make them effective. An Act passed in the 4th year of this reign (1330) in revival of a similar Act in the previous reign, ordained, "that parliaments should be holden every year once, and oftener if need be." It has sometimes been contended, that this Act requires that a new parliament should be annually chosen; but it has been invariably and reasonably construed as requiring only an annual *session*, and not an annual *election*; and the soundness of this construction has been conclusively demonstrated. — (*Edinburgh Review*, March, 1817, Art. 6.)

It may be proper to observe, how singular soever it may now appear, that the right to send representatives to the great council of the nation, was for a lengthened period viewed rather in the light of a burden than of a privilege. The earlier representatives being employed for the advantage of their fellow-citizens in an expensive, and, to them, an unprofitable service, usually stipulated for a sum to defray their outlay; and in the reign of Edward III., 4s. per diem of wages were allowed to a knight of the shire, and 2s. per diem to a burgess. — (*Blackstone*, i. 174.) And hence we find that in the reigns of Edward III., Richard II., and the immediately succeeding princes, several of the inferior, and some of the larger boroughs petitioned the king to be excused from the onerous duty of sending burgesses to parliament. Some of the towns that had been excused on this plea, were replaced on the list of parliamentary boroughs by Elizabeth and other sovereigns; but this was not the case with others, who continued, to their great regret in a later period, to be unrepresented. The practice of paying wages to the members fell into pretty general disuse in Elizabeth's reign; but it was not entirely relinquished till a later period. Andrew Marvell, who was member for Hull in the first parliament after the Restoration, is said to have been the last person who received wages from his constituents.†

Upon the accession of Henry IV., in 1399, we find parliament, as representing the estates of the realm, ratifying the abdication of Richard II., and the choice of Henry, on the principles and nearly in the terms afterwards appealed to and adopted at the Revolution in 1688. It might be, and doubtless was, an object with Henry to have its sanction to his usurpation; and the part taken by the legislature on that occasion must have helped to increase its influence, and to impress it with a sense of its importance. The expulsion of Richard,

\* Constitutional History of England, vol. i. p. 4.

† Brady on Boroughs, p. 127, ed. 1777; Stephens' Rise and Progress of the English Constitution, i. 144; Hallam, Const. History, i. 360, &c.

though effected by the arms of Henry, was in accordance with the wishes of the nation. The Commons, indeed, had previously (in 1382) laid before Richard a remonstrance, remarkable for its bold and independent spirit.—(*Rot. Parl.*, vol. iii., p. 100.) In it, they tell the king, that, “ unless the administration of the kingdom be speedily reformed, the kingdom itself will be utterly lost and ruined for ever.” In this reign, also, the Commons impeached the Earl of Suffolk, Lord Chancellor. A previous impeachment had taken place in the 50th year of Edward III.; but the latter was the more remarkable from the eminence of the person attacked. This grand constitutional engine has, as every one knows, been since frequently brought into operation. In 1405, (7 Hen. IV. c. 15,) an Act was passed, which Carte and others have supposed threw open the elective franchise, for counties, to all the freeholders, instead of confining it to tenants in chief. But the better opinion is, that this statute was intended to restrain the partiality of sheriffs, who had admitted no suitors to vote but those whom they had summoned for that purpose. By directing the election to be made by *all* the suitors, and the return to be made by indenture, to which the electors themselves were to be parties, this statute secured the constituency from undue practices, and at the same time furnishes some presumption that the franchise was beginning to be then regarded by the Commons as a valuable political privilege. It was an early recognition of the importance of a free election, and may be regarded as one of the foundations of our present election law. It ordained, “ that thenceforth, at the next court to be holden for the county, after the delivery of the writ of summons, proclamation should be made, in the full county, of the day and place of the Parliament; and that all they that should be there present, as well suitors duly summoned for the same cause, as others, should attend to the election of the knights for the parliament, and then, in the full county, should proceed to the election, freely and indifferently, notwithstanding any request or commandment to the contrary.”

The Act further directs, that the names of the persons chosen should be written in an indenture, under the seals of all that did choose them, which indenture should be tacked to the writ, and returned along with it to the sheriff. The form prescribed is still adhered to in practice.

It is not very easy to trace the steps by which the Commons succeeded in establishing their valuable privilege of originating money bills, or bills imposing any tax or burden on the public. We have already seen that after the Commons began to be summoned, they usually granted subsidies distinct from those granted by the Lords; and as these subsidies most commonly bore a greater rateable proportion to their means, and affected an incomparably greater number of persons, their gross amount must have very far exceeded the gross amount paid by the peerage. And such being the case, it might appear only reasonable that those who defrayed so much greater a proportion of the grants to the Crown should have the initiative in proposing them. But, in whatever way the practice may have been introduced, the right of the Commons exclusively to originate money bills was asserted as early as the reign of Henry IV., (*Rot. Parl.*, vol. iii.,

p. 611), in such a way as shows it was not then a novelty ; and it has long been reckoned among their undoubted privileges.

The first disqualifying statute, the 8th Henry VI. was passed in 1429 : it confines the right of voting at county elections to the 40s. freeholders ; or as the Act expresses it, to those freeholders who *can dispend* 40s. by the year. In the same reign (23 Hen. VI.,) the legislature enacted, that knights of the shire should be actual knights, or such notable esquires or gentlemen as had estates sufficient to be knights, and by no means of the degree of yeomen ; but the form of writ in use before the passing of this Act, hinders our supposing that this was more than a declaratory law. No qualification appears to have been required, at that period, for the representatives of boroughs.

Here, then, we close our review of the first of the periods referred to. The House of Peers, composed, throughout the greater part of the period, of barons, powerful from their territorial possessions, was at once feared and respected by the Crown. The practice of creating peers, by writ of summons, had, indeed, been commenced, but its influence was hardly felt. The Commons, also, from their peculiar position, as holding the balance of power between the Crown and the nobility, were rapidly advancing in importance. Their support was solicited by both parties, each of which found the advantage of maintaining an interest among them ; and many curious documents are extant, which, by showing the intrigues carried on in the view of procuring or preventing the return of members, are clear proofs of their growing influence. During the latter part, indeed, of the period now described, the Commons actively interfered in the management of public affairs, and manifested no small degree of spirit in asserting and vindicating their privileges. Their right exclusively to originate money bills, to the freedom of debate, and to sundry personal immunities, was claimed and exercised ; and the remonstrances which, from time to time, they addressed to the sovereign, attest at once their independence and their consciousness of their strength. The rights of the subject, also, as far at least, as they depended on laws, were well secured ; though it must be admitted that these were, in general, very ill-observed, and that public disorder and private oppression were of almost perpetual occurrence. Throughout the whole of this period the restraints on the greater and more powerful barons were inadequate to protect either their vassals or the public from their illegal proceedings. They frequently rebelled against the sovereign, made war upon each other, and committed all sorts of despotical acts within their own lordships. The courts of justice were then, also, singularly inefficient. The judges, for the most part, were mere tools of the Crown ; and juries, though rising in importance, wanted independence and power to act on their own views ; and were not unfrequently compelled, in cases of interest, to give verdicts contrary to their conviction. But the leading principles on which the government was conducted were, nevertheless, of an enlarged and liberal description. The cardinal principle that no tax could be levied, no law enacted, without the assent of Parliament, was well observed. No freeman could be lawfully imprisoned, but by legal warrant, specifying the nature of his offence ; and, by long-established usage, equivalent to law,

he might expect to be speedily brought to trial. The trial was had in the public court of the county in which the offence was committed, and the question of guilt was determined by a jury of twelve neighbours of the offender, summoned indifferently by the sheriff, and either cognizant of the circumstances of the alleged offence, or ready to inform themselves by the testimony of others; and, in all ordinary cases, juries were, no doubt, permitted to decide according to the evidence. "It were," says Mr. Hallam, "a strange misrepresentation of history to assert, that the constitution had attained anything like a perfect state in the 15th century; but I know not whether there are any essential privileges of our countrymen, any fundamental securities against arbitrary power, so far as they depend upon positive institution, which may not be traced to the time when the House of Plantagenet filled the English throne." (*Middle Ages*, iii. 301.)

II. In the earlier part of the second period, which extends from the accession of Henry VII. to the Revolution, the constitution can hardly be said to have been progressive; though there was a vast increase of order and tranquillity. In 1485, when Henry was raised to the throne, a marked change in the structure of society had taken place. The powerful families of the feudal period had mostly disappeared, or were partially extinguished during the late civil struggle; the peerage had become little more than a personal distinction, conveying only the valuable privilege of a hereditary right of legislation and jurisdiction; and the Commons had not yet risen into sufficient importance to supply the place of the ancient nobility in contests with the Crown. In consequence of these circumstances, and of the introduction of standing armies, the Princes of the House of Tudor acquired a degree of power and independence before unknown. Hence the reigns of Henry VII., Henry VIII., Mary, and Elizabeth, furnish few acts of constitutional value or importance. The legislature seemed, indeed, during the greater portion of this period, to be at the beck of the sovereign; and though it could sometimes be with difficulty brought to grant subsidies, it did not scruple in 1540, to give to the proclamations of Henry VIII. the force of Statutes (31 Hen. VIII. c. 8.) Elizabeth, though a popular as well as an able princess, frequently treated the Commons with the greatest hauteur, and went so far as to imprison certain members who had distinguished themselves by their opposition to the measures of government. During this period the Courts of Star Chamber and High Commission were either erected or remodelled, the former by Henry VIII., the latter by Elizabeth. And it was then that the doctrines of the divine right of kings, and of the duty of passive obedience, grew up and flourished under the fostering care of priests and lawyers, who found it more agreeable to the prince, and, consequently, more conducive to their own selfish purposes, to draw their notions of civil liberty from the Pandects and Decretals, than from MAGNA CHARTA, and the sound principles of our early polity.

In the meantime, however, two great events had taken place, that changed the whole moral and political aspect of this country and of Europe,—the Reformation, and the discovery of the Art of Printing. The former contributed powerfully to awaken inquiry, and to

strengthen and widen the basis of popular privileges by recognising the right of private judgment in matters of religion ; while the latter, by diffusing, popularizing, and perpetuating all sorts of knowledge, made the people acquainted with their rights, with the grievances under which they laboured, and with the conduct of their rulers. It may, also, be remarked, that the insular situation of England, and the consequent peace she enjoyed, no less than the character of her new religion, assisted in spreading a taste for inquiry, and for all sorts of learning and science. Grammar schools having been generally established at the Reformation, the classic authors of Greece and Rome became the favourite study of the educated classes, and had a corresponding influence. An immense change was thus silently but effectually brought about in the public mind. Even in the latter part of the reign of Elizabeth, the Commons began to evince their impatience of arbitrary power ; and it is difficult to say to what lengths they might have gone, had not the queen prudently consented to the abolition of sundry oppressive monopolies which had provoked their indignation. A still more remarkable proof of the prevalence of liberal opinions among the Commons occurred soon after. In the second year of James I., they prepared a vindication of, or apology for, certain of their proceedings at which the king had taken offence. In this document, which is drawn up in a determined spirit, and with no common ability, after stating, at some length, their privileges and liberties, which, they affirmed, were "their right and inheritance, no less than their very lands and goods," they go on to say : "that in that session the privileges of the House had been more universally and dangerously impugned than ever, as they suppose, since the beginning of Parliaments. That, in regard to the late queen's sex and age, and much more upon care to avoid all trouble, which by wicked practice might have been drawn to impeach the quiet of His Majesty's right in the succession, those actions were then passed over, which they hoped, in succeeding times, to redress and rectify ; whereas, on the contrary, in this Parliament, not privileges, but the whole freedom of the parliament and realm, had been hewed from them." "What cause," they proceed, "we your poor Commons have to watch over our privileges, is manifest in itself to all men. The prerogatives of the prince may easily and do daily grow. The privileges of the subject are, for the most part, at an everlasting stand. They may be, by good providence and care, preserved ; but being once lost, are not recovered but with much disquiet." (*Parl. Hist.* 1630 ; *Hallam's Const. Hist.* i. 417.)

It was not, however, till the following reign, that the strength which popular principles had been for some time acquiring, became fully apparent. Charles I., deeply impressed with the notions of divine right and absolute power, ascended the throne under the complicated disadvantages of a union with a Roman Catholic princess ; the dominion of an unpopular favourite, the Duke of Buckingham ; and an exchequer much disordered by the prodigalities of his predecessor. To these adverse circumstances have to be added a want of sincerity and directness of purpose. But his great defect, and the grand source of the disasters he entailed on himself and the country, consisted in his arbi-

trary principles of government. He could not brook the growing power and influence of Parliament; and was infatuated enough to suppose that a nation so rich, populous, and enlightened as England now was, and which had long possessed a representative assembly, would submit to be governed in the same way as in the reigns of Henry VIII. and Elizabeth. It was then that the advantage to the popular cause of being able to appeal to such a national record as *Magna Charta* became obvious. Men, eager for the formation of a free government, found in it the rudiments of one ready framed to their hands. It also showed they were attempting no innovations; that they asked only for the constitution granted to their fathers; and thus by judiciously combining the deductions of reason with principles long established, the reformers of that day enlisted the prepossessions of all classes in their service; a circumstance of the last moment in such a struggle.

The great constitutional acts passed in the reign of Charles I. do little more than recite and confirm the ancient charters and statutes already referred to, and provide for their more effectual observance. Thus, the famous declaratory statute, called the Petition of Right (3 Charles I., c. 1, 1627), framed by the most celebrated statesmen and lawyers of that age, commences by reciting the statute of Edward I., "De tallagio non concedendo," and the clause in *Magna Charta* on the same subject; and concludes by praying, nearly in the words of those statutes, that their contents should be re-enacted, and that their previous violations should not be drawn into precedent. The act for abolishing the Star Chamber and jurisdiction of the Privy Council (16 Charles I., st. 10, 1640), in like manner sets out by reciting the clause of *Magna Charta*, and the acts of Edward III., which declare it to be illegal to imprison a free man otherwise than by the judgment of his peers; and again declares that neither his Majesty nor his Privy Council has any jurisdiction, power, or authority, by English bill, petition, articles, libel, or by any other arbitrary way whatsoever, to examine or draw into question, determine, or dispose of the lands or goods of any subject of this kingdom; but that the same ought to be tried and determined in the *ordinary courts of justice*, and by *course of law*. By another Act, passed in the same year with that last mentioned, the Court of High Commission was also abolished.

The military despotism which succeeded terminated with the death of Cromwell. England had passed the period when such a government could be maintained, unless by rulers of extraordinary talent, and, perhaps, not even by them. In 1660, Charles II. was recalled to the throne of his ancestors, and the old constitution re-established. His reign is memorable for the passing of the *Habeas Corpus* Act, (31 Car. II., c. 2, 1679), denominated the palladium of an Englishman's liberty. It empowers every man detained in prison on questionable grounds, to insist on being forthwith brought before a judge of one of the higher courts, to have the legality of his detainer determined; and it declares it to be illegal for the sovereign to send any British subject to prison "beyond the seas." It is a mistake, however, to suppose that this Act introduced anything essentially new: the writ of *Habeas Corpus*, and the subject's right to it, are as old as the constitution itself; but,

in the preceding reigns, the slavish ingenuity of the judges and crown lawyers had succeeded in creating formidable obstacles to the issue of the writ, which, with other abuses, this statute was calculated to remove. In this reign, also, in 1667, the important privilege of the freedom of speech, or of debate in parliament (subject only to the restrictions deemed necessary to preserve order and decorum), was established in an authoritative manner. Such freedom is, indeed, essential to the very being of a deliberative body; and had been asserted and exercised since the first sittings of parliament. But, however indispensable, this privilege had, like most others, been impeached by the courts in the early part of the reign of Charles I. But the proceedings on that occasion were now declared to be illegal; and the freedom of speech in parliament was confirmed by a decision of the House of Lords, and by the joint declarations of both Houses. At the Revolution, this freedom was finally established, on the broadest basis, by a clause in the Bill of Rights.

The right to petition the king and both Houses of Parliament, and to lay before them a full statement of the wishes, and of the real or supposed grievances of the subject, is one of the most valuable constitutional rights of Englishmen. By it the legislature is authentically informed of the feelings and wishes of the nation as well as of individuals, on all points of public interest and importance; and the risk is obviated of introducing, or of ignorantly sanctioning, measures opposed by any considerable portion of the people. This right was recognised and regulated by an Act of the 13th Charles II., and was afterwards unequivocally asserted and confirmed by the Bill of Rights, with no other restraint than that which was deemed essential to its effective exercise, and to the preservation of the public peace.

Charles II. was succeeded, on his demise in 1685, by his brother James II. The latter, an avowed and zealous Papist, and imbued with the highest notions of the prerogative, speedily succeeded, by his despotical proceedings, in alienating and disgusting the all but entire body of his Protestant subjects. The Revolution of 1688, which was the consequence of these proceedings, had many features in common with the measures which had taken place nearly three centuries previously on the abdication of Richard II. Again the nation, represented by its three estates, asserted and exercised the right of compelling one sovereign to abdicate, and of substituting another in his stead. The facility with which it did this is, perhaps, unparalleled in history; and must, no doubt, be in part, at least, ascribed to the consummate prudence of our great deliverer, William III. While a change of dynasty or of the constitution, how necessary soever, has rarely been effected in other states except by some convulsive effort, amid violence and bloodshed, the English Revolution was brought about without any disturbance of public or of private rights, and almost without any interruption of the daily concerns of life. It was dictated by reason, not by passion or vengeance; it was not resorted to until all other methods of redress had been tried and failed; and then the leaders of the people and of the peerage concurred in its necessity, and co-operated in its accomplishment.

On this occasion, before the crown was tendered to William and

Mary, a solemn declaration of the rights and privileges of the subject was made by the Lords and Commons, as "representing all the estates of the people of this nation;" which was subsequently ratified by Parliament in the celebrated statute (1 Will. and Mary, sess. 2, 1689), known by the name of the "Bill of Rights." Like the popular Acts of Charles I. and II., it contained nothing unknown to the constitution; but, being the last occasion on which the liberties of the people and the prerogatives of the Crown were defined, it may be proper to extract from it so much as relates to them.

By this statute it is declared—

1. That the pretended power of suspending of laws or the execution of laws, by regal authority, without consent of Parliament, is illegal.
2. That the pretended power of dispensing with laws, or the execution of laws, by regal authority, as it hath been assumed and executed of late, is illegal.
3. That the commission for erecting the late Court of Commissioners for Ecclesiastical Causes, and all other commissions and courts of like nature, are illegal and pernicious.
4. That levying money for or to the use of the Crown by pretence of prerogative, without grant of Parliament, for longer time or in other manner than the same is or shall be granted, is illegal.
5. That it is the right of the subjects to petition the King; and all commitments and prosecutions for such petitioning are illegal.
6. That the raising or keeping a standing army within the kingdom in the time of peace, unless it be with consent of Parliament, is against law.
7. That subjects which are Protestants may have arms for their defence, suitable to their conditions, and as allowed by law.
8. That election of members of Parliament ought to be free.
9. That the freedom of speech, and debates or proceedings in Parliament, ought not to be impeached or questioned in any court or place out of Parliament.
10. That excessive bail ought not to be required, nor excessive fines, nor cruel and unusual punishments inflicted.
11. That jurors ought to be duly impaneled and returned, and jurors who pass judgment upon men in trials for high treason ought to be freeholders.
12. That all grants and promises of fines and forfeitures of particular persons, before conviction, are illegal and void.
13. That for redress of all grievances, and for the amending, strengthening, and preserving of the laws, parliaments ought to be held frequently.

This Act, with the Act of Settlement, which excluded James and the greater part of his family from the succession, and fixed it eventually in the Protestant line of Hanover, completed the Revolution.

Such was the end of that 50 years' struggle which commenced with the meeting of the Long Parliament in 1640. That the popular party, in the course of this lengthened contest, advanced on some occasions unjustifiable pretensions, and that their conduct was sometimes subversive of the principles by which they pretended to be actuated, is

most true. But after every allowance is made for their faults, follies, and errors, they are still entitled to the warmest gratitude and respect, not merely of Englishmen, but of the whole human race. They successfully vindicated the supremacy of the nation, and the right of resistance to unconstitutional power. And they displayed in the hour of their triumph, a degree of moderation and of practical good sense, that does them the highest honour. Their example has had a powerful influence in all civilized countries, and the form of polity that they established has been introduced into the United States, France, and other nations. Its influence in England has been beneficial beyond all that could have been reasonably anticipated; and we are indebted for by far the larger part of our superior comforts and wealth, and for the distinguished place we occupy among the nations of the earth, to the triumph of those free principles of government that were consolidated by the Revolution. From this period, English history assumes a new aspect: the conflict of parties succeeds to that of principles. It is true that, for some time after the Revolution, speculative opinions respecting the royal prerogative continued to vary; and the adherence of a large body of the people to the exiled family, placed the constitution in considerable danger: but the fundamental doctrines of the inviolability of the sovereign, the responsibility of ministers, and the supremacy of parliament, were never afterwards practically contested. Force was abandoned; and government, maintained in ordinary times by influence, was controlled in crises of importance by public opinion.

III. We come now to the consideration of the third period, which brings us down to the present time. After the Conquest, we saw a people deeply imbued with ideas, if not of civil liberty, at least of freedom and independence: emerging from a rude and barbarous polity, we saw the constitution growing up, and assuming a form impressed by circumstances, rather than moulded on any preconceived plan: we saw that constitution, after being repeatedly strengthened and confirmed by charters of the sovereigns, and by solemn acts of the legislature, settled nearly on its present basis. When the civil commotions which distracted England during the lengthened period from the accession of Richard II. to the defeat and death of Richard III. at the battle of Bosworth Field in 1485, had subsided, and a new and more powerful dynasty had succeeded to the throne, the circumstances which led to the establishment of the constitution, and which had previously supported it, either did not exist, or were materially impaired. Hence we saw the constitution begin to degenerate from a limited towards an absolute monarchy. But as society advanced, and the numbers, wealth, and intelligence of the people increased, they reasserted their rights, and happily succeeded, after a lengthened contest, in establishing them on a secure basis. Although, however, the ancient form of government was preserved, the Revolution effected a prodigious change in its spirit and character. No longer a powerful lord at the head of his vassals, as in the first period; nor an all but absolute monarch, feebly controlled by an inefficient parliament, as in the greater part of the second; the King is now a constitutional sovereign acting by responsible ministers. Since the Revolution, the Crown has been

dependent for its ordinary revenues on the House of Commons, and has been unable to carry any measures, except by the aid of a majority in parliament. The management of political affairs has consequently been left, without any ostensible interference on the part of the sovereign, to ministers selected from among the individuals who have enjoyed the confidence or support of the houses of Lords and Commons, or, at all events, of the latter. The ministers have naturally endeavoured to strengthen their party and preserve their ascendancy by the judicious distribution of the vast patronage in their possession. And when they have really possessed the confidence of the sovereign, been for a considerable time in power, and acted with due discretion and ability, the government has frequently acquired a strength and vigour greater even than in the palmy days of prerogative. At least, such was the case previously to the passing of the Reform Act.

Among the constitutional changes to be noticed in this period are the Unions with Scotland and Ireland; the former of which took place in 1707, the latter in 1800. A statute was also passed in the 9th of Anne, which made a qualification of landed property necessary both for knights of the shire, and for borough members. The Triennial Act (6th of William and Mary, c. 2, 1694) limited the duration of each parliament to three years, before which period the duration of parliament was not restricted to any specified term, but might have been indefinitely extended by prorogations. This Act was not, however, long in existence, having been set aside in 1717, by the 1 Geo. I. st. 2, c. 38, commonly called the Septennial Act, from its prolonging the statutory duration of the parliament then sitting, and of all subsequent parliaments, to seven years. Notwithstanding what Mr. Hallam has alleged to the contrary (*Const. History*, iii. 316), we are inclined to think that the constitutionality of this measure was not a little questionable. But of its expediency at the time when it was passed there can be no reasonable doubt; and we agree with those who think that in its practical working it has turned out advantageously; and that seven years is on the whole a better term to which to limit the duration of parliament than three years.

The continued and rapid extension of manufactures and commerce since the peace of Paris in 1763, has, by giving birth to new and powerful classes, materially changed the former distribution of political power, and has already produced, and, no doubt, will continue to produce, great changes in the constitution. After the epoch referred to, large manufacturing and commercial towns grew up in all parts of the country, the inhabitants of which were but little influenced by those powerful ties which generally connect an agricultural population with the superior landowners. Education was more generally diffused; and a desire for political information increased with the increase of opulence and population. In consequence, political journals were established in every considerable town, in which the speeches made in parliament were fully reported; and the conduct of public men, and the measures of government, freely canvassed. The improved facilities of internal communication afforded the means of conveying intelligence with astonishing rapidity from one part of the country to another; so that most persons began to take an interest, not only in what was going

on around them, but in public affairs, and in the concerns of the remotest parts of the empire. Prejudices and established opinions of all sorts were openly attacked. The structure of the political fabric, and the rights and privileges of the different ranks and orders of society, were subjected to a searching investigation; and their claim to respect began to be tried by reference to their usefulness rather than to their antiquity. Under such circumstances, we need not be surprised that the expediency of making some change in the constitution of the House of Commons became gradually more and more obvious. The parliamentary boroughs had all been specified previously to the Revolution; and no provision was made for admitting representatives for such new boroughs as might afterwards attain to importance, or for the disfranchisement of such of the parliamentary boroughs as might happen to fall into insignificance. Hence it came to pass that many commercial and manufacturing towns, such as Manchester, Birmingham, Sheffield, Leeds, Halifax, Bolton, &c., which had attained to vast wealth and importance since the parliamentary boroughs were selected, were excluded from all share in the representation, while, on the other hand, many boroughs that had become quite unimportant continued to enjoy this valuable privilege. A distinction of this sort could not be long endured. During the American war, the great manufacturing towns began publicly to manifest their impatience at being deprived of representatives; and deriving confidence from their numbers, their wealth, and their intelligence, they prosecuted their claims to participate directly in the privileges of the constitution with a boldness which would probably have been long ago successful, had the progress of constitutional reform not been arrested by the violence of the French revolution. The alarms occasioned by that event, and by the war that grew out of it, suspended for a while the demand for an improved representative system. But after the peace of 1815, this demand was renewed; and its reasonableness, the immense addition that had been made to popular influence, and the excitement occasioned by the movements on the Continent in 1830, made it imprudent, or rather impossible, longer to disregard it. A free government, to be secure, must possess the confidence of the people; and to enjoy this it must, how reluctantly soever, conform to their reasonable wishes. It is idle to suppose that any constitutional system can be absolutely perfect, or that it may be always maintained without variation. Human institutions are not destined to be immortal; and unless they be voluntarily modified and accommodated to the varying exigencies of society, the probability is they will be violently overturned. Impressed with this conviction, a reconstruction of the representative system on a more liberal basis was resolved upon by parliament, and was at length carried into effect by the Reform Act. This important statute, which will immortalize the names of its authors, the late Earl Grey and Lord John Russell, by disfranchising a good many decayed and trifling boroughs, and enfranchising the greater ones, and giving the right of voting at the election of members for towns to the holders of 10*l.* houses, has rendered the House of Commons a good deal more democratical than formerly, and has, consequently, made it correspond better with the theory of the constitution. This tendency

has, perhaps, also been strengthened by the changes that were at the same time made in the county representation, though that is more doubtful.

The period that has elapsed since the passing of the Reform Act is too short to enable any one to estimate with much confidence the real influence of the changes it effected. On the whole, however, they certainly have hitherto been, and will most likely continue to be, highly beneficial. It is obvious that such a modification of our institutions as should admit the great towns, that had grown up since the parliamentary boroughs were selected, to a direct participation in the privileges of the constitution, was alike just and indispensable. It was an insult to common sense that Gatton and Old Sarum should be represented, and that Manchester and Birmingham should not; and the wonder is, that so revolting an anomaly should have been so long maintained. The only question now is, has the franchise been placed in proper hands? Time only can resolve this; but there are, perhaps, some grounds for apprehension. It appears to us that, in a country like Great Britain, with so great a public debt, and where so much depends on the security of property in opinion, as well as in fact, the power to send representatives to the House of Commons should not have been conceded, except to those who, from their position in society, might be presumed to have a substantial interest in the support of the existing order of things. But the occupier of a 10*l.* house, or of a 50*l.* farm, may be, and in fact not unfrequently is, little better than a beggar. And we are not of the number of those who believe, or affect to believe, that a person with only 20*s.*, or without anything, will feel himself as much interested in good government, and in the maintenance of that security so essential to all great undertakings, as the owner of an estate or of a cotton-mill. That such person has a real interest in the well-being and tranquillity of the empire, is most true; but it is absurd to suppose that he will be so likely to be influenced by a wish for its promotion, or that he will be so little disposed to lend a willing ear to the harangues of demagogues, or to withhold his sanction, in periods of distress or excitement, from dangerous projects, as a person with some considerable amount of property.

Much stress has been laid on the difficulties in the way of the establishment of a *bonâ fide* property qualification; but though formidable, these are not insuperable; and provided the qualification were of a reasonable amount, it appears to be the most likely means of providing for the respectability and independence of the constituency, and consequently, of ensuring the election of representatives to whom the affairs of the country might be safely entrusted.

We believe, however, that the objectionable class of electors alluded to above forms in most, if not in all, instances a minority; and that the good sense and obvious interest of the bulk of the people will be sufficient to hinder any rash or dangerous tampering with our institutions. It were well, however, that steps were taken to give the Reform Act fair play, by putting a stop, if that be practicable, to the manufacture of fictitious votes. In many instances this practice has been carried to a very great height, and threatens, unless put an end to, to subvert every sound principle of representation.

## CHAPTER II.—PARLIAMENT, ITS CONSTITUTION, PROCEDURE, ETC.

### SECT. 1. *House of Lords.*

HAVING made these preliminary remarks, we proceed to notice the different parts of the constitution, beginning with the legislative body or parliament.

In treating of parliament, we shall first exhibit its constituent parts; secondly, its method of transacting business; and, thirdly, the mode in which it is adjourned, prorogued, and dissolved.

The constituent parts of parliament are the King, the Lords Spiritual and Temporal, and the Commons.

The consideration of the KING and his office comes more properly under that part of the present inquiry which treats of the executive department of government; to which, therefore, we defer it.

The HOUSE OF PEERS, the next in dignity, consists of the Lords Spiritual and Temporal of the United Kingdom. The feudal origin of the peerage has been already noticed; it is now, however, a mere titular dignity conferred by the Crown at pleasure. At present [1846] the House of Lords is composed nearly as follows, but the number, of course, varies from time to time, according to the creation and extinction of peerages:—

|                                                          |     |                                                                           |     |
|----------------------------------------------------------|-----|---------------------------------------------------------------------------|-----|
| Peers of the blood royal. . . . .                        | 3   | Peers of Ireland (elected for life,<br>of whom 2 are British peers) . . . | 28  |
| Dukes . . . . .                                          | 20  | English archbishops and bishops . .                                       | 26  |
| Marquises . . . . .                                      | 20  | Irish representative archbishop<br>and bishops . . . . .                  | 4   |
| Earls . . . . .                                          | 116 |                                                                           |     |
| Viscounts . . . . .                                      | 22  |                                                                           |     |
| Barons . . . . .                                         | 201 |                                                                           |     |
| Peers of Scotland (elected each<br>parliament) . . . . . | 16  | Total (exclusive of 2 of the Irish<br>peers) . . . . .                    | 456 |

The judges, attorney and solicitor-general, the King's serjeants (unless they are members of the Commons, in which case their attendance is dispensed with), the master of the Rolls and masters of Chancery, are summoned, at the commencement of every session, to attend on the peers for the purpose of giving their opinion and advice when required, or of performing certain ministerial offices. They are not, however, admitted to vote; and, in practice, the judges only are required to assist the Lords with their opinion.

The Lords Spiritual, who sit in the Upper House, are the 2 archbishops and 24 bishops of England, and 1 archbishop and 3 bishops from Ireland, who succeed in rotation, and sit for a session only, agreeably to the Act of Union with that country. There being no episcopal establishment in Scotland, no Spiritual Lords are sent from that part of the United Kingdom.

Considerable difference of opinion prevails in regard to the origin of the right of the bishops to sit in parliament. Some have contended that they sit there solely as barons by tenure upon feudal principles; while others contend that their seat in the parliamentary assemblies of this and other countries is ascribable to the powerful influence they early acquired in the various nations that rose upon the ruins of the Roman empire, and that it had no reference to their temporal posses-

sions. On this subject, the Report of 1821 of the Committee of the House of Lords on The Dignity of the Peerage, has the following observations:—"The right of a bishop to sit seems to be in the nature of a franchise annexed to the temporalities of his see, founded on long custom. A bishop, therefore, does not become a lord of parliament until he has been invested with the temporalities of his see; then, and not before, is he entitled to a writ of summons to enable him to take his seat. Consecration, it must be remembered, merely confers the spiritual part of the office; the investiture puts him in possession of the temporalities. When a bishop is translated from one see to another, his right to a seat in parliament, as a franchise annexed to the temporalities of his former see, ceases in consequence of his cession of that see from which he has been so translated, and he does not become entitled until invested with the temporalities of his new see."

The Lords Temporal comprise such peers of the realm as are lords of parliament, and consist (being enumerated in the order of their rank,) of Dukes, Marquises, Earls, Viscounts, and Barons. Dismissing from our consideration the territorial dignities which existed among our Saxon ancestors, and confining ourselves to the period that has elapsed since the Conquest, we find that the titles of earl and baron are the oldest that occur in our history; those of duke, marquis, and viscount, being of later origin. The first creation of a duke was by Edward III., who conferred, (in 1335 or 1337,) on his eldest son, the Black Prince, the title of Duke of Cornwall. The title of marquis dates from the reign of Richard II., and that of viscount from the reign of Henry VI. The Crown has, for a lengthened period,\* enjoyed the prerogative, as the fountain of honour, of conferring on distinguished individuals titles of nobility with the dignity, power, and privilege of peers of the realm and lords of parliament. By the law of England, *Peers of the realm* are always Lords of Parliament; but this is not necessarily the case with a Scotch or Irish peer.

Formerly, England, Scotland, and Ireland had each its own parliament, and, consequently, its own House of Peers. After the union of the three kingdoms, their several parliaments were united into one, and the peerage underwent a material change. Such only as were *peers of England* at the union with Scotland, in 1707, were entitled, as a matter of course, to sit in the new parliament of Great Britain, the Scotch peers being represented in it by 16 of their number chosen by themselves at the commencement of each parliament. At the union with Ireland, none but *peers of Great Britain* were entitled to take their seats in the new parliament of the United Kingdom, the Irish peers being represented therein by 28 of their number, chosen for life. The number of Scotch and Irish peers who were thus excluded from parliament, has been since very much diminished through the practice which has prevailed, of creating them peers of Great Britain, and of the United Kingdom, and so making them lords of parliament.

*Creation of Peers.*—Peerages are at present created by writ or by letters patent; those who claim by descent supposing either a writ

\* It is doubtful, however, whether, as some contend, the Crown always enjoyed this privilege. At all events, there are repeated instances in our earlier history of the creation of peers by Act of Parliament. (*Hallam, Middle Ages*, iii. 192.)

or patent to have been made to their ancestors, though by length of time it has been lost. Creation by writ, or by King's letter, is a mere summons to an individual to attend the House of Peers by the style and title of the dignity which the King is pleased to confer. A patent is a royal grant to a subject of the dignity and degree of peerage. The creation by writ is the more ancient way; but it is said not to ennoble an individual unless he actually take his seat in the house: some are of opinion that there must be at least two writs of summons, and a sitting in two distinct parliaments, to establish in evidence an hereditary barony; and, therefore, the most usual, because the surest way, is to grant the dignity by patent, which insures it to the patentee and his heirs general or in tail, according to the limitation, though he should never himself make use of it. It is not, however, an unfrequent practice to call up the eldest son of a peer to the House of Lords by writ of summons in the name of some barony vested in the father, because in that case there is no danger of his children losing their nobility, as they must, at all events, succeed to their grandfather. Creation by writ is said to have this advantage over that by patent, that a person so created holds the dignity to himself, and his lineal descendants, male or female, without any words to that purport in the writ; whereas, in letters patent, there must be words to give the inheritance or limit the descent of the peerage, otherwise the dignity lasts only for the life of the grantee. A peerage, it is to be observed, may be created for life only, or be made to descend to some particular heirs only, or be limited to collateral relations. The mere tenure of certain lands, castles, or territorial possessions, formerly gave their owners the rights and privileges of the peerage; but the established opinion now is, that such claims can no longer be sustained.\* During the prevalence of the feudal restraints on alienation, a peerage of this sort was, perhaps, not very open to objection; but it is at variance with modern principles; and it has accordingly been resolved by the House of Lords that peerages are not capable of being barred, alienated, or surrendered by act of the party.† A peer cannot lose his nobility but by death or attainder, though we have an instance in the reign of Edward IV. of a peer (George Neville, Duke of Bedford,) being degraded by Act of Parliament, on the ground that his poverty rendered him unable to support his dignity.‡ It has no doubt been said, that the King may not only confer, but that he may also take away the dignity of the peerage; but this is denied by later authorities, who hold that it can only be done by Act of Parliament as in the instance now noticed. The question, whether a person, on whom the dignity of peer may descend or may be conferred, can waive or refuse the honour, has been agitated, but does

\* Arundel Castle is one of these. But supposing it were now to pass out of the hands of its present owner (the duke of Norfolk), the purchaser would not, according to the modern doctrine, be entitled to a writ of summons, or consequently to any privilege as a lord of parliament.

† See Third Report of the Lords on the Dignity of Peer.

‡ The preamble to this Act is curious: Forasmuch as oftentimes it is seen, that when any lord is called to high estate, and hath no convenient livelihood to support the same dignity, it induceth great poverty and indigence, and causeth oftentimes great extortion, embracery, and maintenance to be had, to the great trouble of all such counties where such estate shall happen to be; therefore, &c.

not appear to have been decided; and it is plainly one more of curiosity than of practical moment. In Queen Anne's reign, as many as 12 peers were created at once for the express purpose of giving the preponderance to a party in the Upper House; but this, though a legal, cannot, with any propriety, be called a constitutional proceeding.

In 1718 a measure was introduced into Parliament, with the consent of the king, George I., for abolishing the prerogative of creating peers, and limiting the numbers of which the House of Lords was, in future, to consist. This measure, which would have made a great immediate addition to the power of the Lords, passed easily through their Lordships' house, but was rejected by a great majority in the Commons. One of the principal arguments in behalf of the measure was founded on the abuse (noticed above) of the power to create peers in the reign of Anne; and on the propriety of guarding against its recurrence. But this, though a desirable object, is not very easily attainable; and had the measure of 1718 been carried, the probability is that it would, by isolating the peerage, have tempted that body to pursue measures that might occasionally have been at variance with the public interests; while, instead of being looked up to with respect by all classes as at present, and regarded as an order to which every deserving individual may hope to elevate himself or his descendants, it would have been viewed with mingled feelings of jealousy and aversion; and would, most likely, have been already overthrown. At the same time, however, there can be no doubt that the prerogative of creating peers has been far too liberally exercised, not to say abused, since the Revolution, and more especially since the accession of George III. Mr. Pitt and the ministers by whom he has been followed, with the single exception of Sir Robert Peel,\* have lavished peerages with a profusion that has been injurious alike to the dignity and legitimate influence of the peers, and to the independence of the Commons. In this respect the practice of elevating successful generals and admirals and distinguished lawyers to the peerage, has been most injudicious. Such persons have rarely fortunes adequate to support the station of peers; and it is customary, indeed, to give them pensions for two or three lives, in the view of enabling them to defray the expenses incident to their elevation. But a practice of this sort must plainly, in the end, fill the House of Peers with a servile herd of dependents on the Crown or on the minister of the day. And if it be really desirable to raise warriors and lawyers with but slender fortunes to the Lords, the better plan would be to confer the dignity for life only.

The claimant of a peerage petitions the King for a writ of summons, who refers the claim to the House of Lords to be investigated. When a peerage, as sometimes happens, is in abeyance (as when it devolves on co-heiresses), none can assume the title till the Crown has ter-

\* His administration forms in all respects a striking contrast to most administrations by which it has been preceded. Sir Robert Peel is the only minister since the Revolution who has on all occasions kept the interests of the country steadily in view; and who has never either sacrificed or postponed them for the sake of party or of power.

minated the abeyance by selecting one of the claimants at discretion. If the party in whose favour the abeyance is terminated be a commoner, it is done by writ of summons directed to him in the style and title of the barony in abeyance; if he be already a peer, and has a higher dignity, in such case the King confirms the barony to him by letters patent: the latter course is also adopted in the case of a female claimant.

The Lords Spiritual and Temporal, though they differ in their creation and in the right in which they sit, form one integral assembly, and are blended together under the common name of the Lords. A bill, passed by the Temporal Lords in the absence of all the Spiritual Lords, or against their will, would be as valid as if they had been present; and the same, it is conceived, would be the case with respect to a bill passed by the Spiritual against the unanimous votes of the Temporal Lords.

We may observe, before dismissing this part of our subject, that the peerage in England is a strictly personal dignity, and that it attaches exclusively to the individual in possession of the peerage. In other countries the descendants of nobles are all noble; but this has never been the case in England. With the exception of the individual on whom a peerage actually devolves, the other descendants of a peer are universally commoners. The titles they sometimes enjoy are mere marks of courtesy; the sons and daughters of dukes and earls, though of noble blood, having, in the eye of the law, no pre-eminence of any sort over the humblest individuals.

Hence the intimate connexion of all classes in this country. Except in the case of peers, who enjoy valuable but not oppressive privileges, every rank and order of men in the state, including the families of peers, have always enjoyed the same rights, and been subject to the same laws. And, to borrow the expressions of Mr. Hallam, "There is no part, perhaps, of our constitution so admirable as this equality of civil rights, this *isonomia*, which the philosophers of ancient Greece only hoped to find in democratical governments. From the beginning our law has been no respecter of persons. It screens not the gentleman of ancient lineage from the judgment of an ordinary jury, nor from ignominious punishment. It confers not, it never did confer, those unjust immunities from public burdens, which the superior orders arrogated to themselves on the continent. Thus, while the privileges of our peers, as hereditary legislators of a free people, are incomparably more valuable and dignified in their nature, they are far less invidious in their exercise than those of any other nobility in Europe. It is, I am firmly persuaded, to this peculiarly democratical character of the English monarchy, that we are indebted for its long permanence, its regular improvement, and its present vigour. It is a singular, a providential circumstance, that in an age when the gradual march of civilization and commerce was so little foreseen, our ancestors, deviating from the usages of neighbouring countries, should, as if deliberately, have guarded against that expansive force, which, in bursting through obstacles improvidently opposed, has scattered havoc over Europe."—(*Middle Ages*, ii., 478.)

SECT. 2.—*House of Commons.*

The HOUSE OF COMMONS, as remodelled by the Reform Act, consists of 658 members, returned as follows :—

|                                     | Members. |
|-------------------------------------|----------|
| England; for 40 counties . . . . .  | 144      |
| — 2 universities . . . . .          | 4        |
| — 186 cities and boroughs . . . . . | 323      |
| Wales; for 12 counties . . . . .    | 15       |
| — 57 cities and boroughs . . . . .  | 14       |
| Scotland; for 33 counties . . . . . | 30       |
| — 76 cities and boroughs . . . . .  | 23       |
| Ireland; for 32 counties . . . . .  | 64       |
| — 1 university . . . . .            | 2        |
| — 33 cities and boroughs . . . . .  | 39       |
| Total . . . . .                     | 658      |

It is, however, a principle of the constitution that, though the members of the House of Commons be returned by particular districts, they are not to be considered as representing the constituency of such districts, but the commonalty of the whole kingdom. They are not the authorised agents of a county or borough, elected with a view to promote its local interests, or to represent its wishes, but they are summoned to consider and assent to those measures which shall appear to them to be conducive to the common welfare, or essential to the support of the state, and to oppose those having an opposite tendency. It is probable, indeed, that the Commons were formerly summoned to parliament with a more limited object, and were the depositaries of a more limited power from their constituents.\* But a different practice has been established for centuries, and the larger principle, laid down above, is no longer to be controverted.†

In treating of the constitution of the House of Commons, we shall notice, 1st, the qualification of electors; 2nd, the qualification of members; and, 3rd, the manner of holding an election.

1. *Electors.*—Certain persons are altogether disqualified from being electors; some for ever, as women and idiots; and others during the existence of the disability only. In the latter class are to be ranked persons attainted of treason or felony, or convicted of bribery, perjury, or subornation of perjury, minors, and aliens; the disqualification of the latter, however, ceases on their being made denizens, or naturalised by Act of Parliament. To these may also be added all persons receiving parochial relief, except militia-men absent on duty, whose families may be relieved without affecting the franchise. By the 23 Geo. III., c. 41, no person in any way employed in collecting or managing the duties of excise, the customs, the stamp duties, the duties on windows or houses, or in collecting the revenues of the post office, or in conveying the mail to or from foreign parts, is allowed, while holding such employment, to give his vote, or interfere in any election, under a penalty of 100*l.*, his vote at the same time being declared void. This Act, however, does not extend to persons engaged in collecting the land-tax, or any other rates or duties granted by Act

\* Clause 38 Henry III.; 13 Edward III. 2 Rot. Parl. 104, &c.

† 4 *Coke, Inst.* 14. 2 *Whitelocke's Notes*, 329.

of Parliament, or to any person holding any office usually granted under letters patent for any estate of inheritance or freehold. Lords of parliament are also disabled from voting, by a resolution of the House of Commons.

*Qualification of County Electors.*—Before the Reform Act, the qualification of county voters was regulated by the 8 Henry VI., c. 7, by which the suffrage was limited to such as possessed freeholds of the value of 40s. a-year at the least, clear of all charges. These freeholds, however, only confer a vote for the county within which they are situated. The Reform Act (2 Will. IV., c. 45, 7th June, 1832) has partially restrained the franchise in respect of freeholds for lives, but has greatly extended it in respect of other property, by conferring a right of voting upon certain lessees, leaseholders, and tenants by copy of court roll, or other similar tenure. By that Act, no person is to vote in the election of knights of the shire, or of members for any city or town being a county of itself, in respect of any freehold lands in which he has only a life estate, whether for his own life or the lives of others, unless in actual and *bonâ fide* occupation thereof, or except they came to him by marriage, marriage settlement, devise, or promotion to any benefice or office, or unless they are of the clear yearly value of not less than 10*l.* above all rents and charges. All persons, however, who were in possession of such life estates at the time of passing the Act are expressly excepted. By the same Act, the elective franchise for counties has been extended to persons seised at law or in equity of any lands or tenements of copyhold or any other tenure for their own lives, or for the lives of others, or for any other larger estate, of the clear yearly value of 10*l.* per annum. Leaseholders of lands of that value, whatever may be their tenure, whose leases were originally created for a term of not less than 60 years, and leaseholders of lands of the clear yearly value of 50*l.* whose leases were originally created for a term of not less than 20 years, are now also entitled to vote; so, also, are all persons who occupy as tenants any lands or tenements for which they are *bonâ fide* liable to a yearly rent of not less than 50*l.*, subject, nevertheless, to this proviso, that no person being only a sub-lessee, or the assignee of any under-lease, shall have a right to vote in respect of any such term of 60 or 20 years, unless in actual occupation of the premises.

The charges of which the lands are to be clear do not, it should be observed, include public or parliamentary taxes, church, county, or parochial rates.

Mortgagees and trustees are not entitled to vote in respect of their trust estates, unless in actual possession, or receipt of the rents and profits [to their own use, as it should seem, § 26]; nor is any freeholder entitled to vote in a county election in respect of lands and premises in his own occupation, which do or might confer on him the right of voting for any city or borough; and no copyholder, leaseholder, or other tenant, can vote in a county election in respect of lands and premises which do or might confer on him, or any other person, the right of voting for any city or borough.

Before any person can vote at the election of knights of the shire, he must have been duly registered; and no freeholder, copyholder,

customary tenant, or tenant in ancient demesne, is to be so registered in respect of any lands, unless he have been in actual possession, or in receipt of the rents and profits for his own use for six calendar months, at the least, previous to the last day of July in such year; and no such leaseholder, occupier, or tenant, is to be so registered in respect of any lands he may so hold, unless he shall have been in actual possession, or in the receipt of the rents and profits for his own use for 12 calendar months, at the least, next previous to the last day in July in such year. All lands or tenements, however, which may come to any person at any time within the above-mentioned periods by descent, succession, marriage, marriage settlement, or promotion to any benefice in the church, or any office, are excepted; and for these a person may have his name registered as a voter at any time, however short his possession.

Whatever may be the amount of property which a person possesses in any one county, it confers only a single vote: the same person may, however, possess votes for different counties, if he have lands of a sufficient value within each.

*Qualification of Electors in Boroughs.*—The qualification of electors in cities and boroughs depends on different principles. The prevalent qualification in corporate cities or towns was formerly the freedom of the place; but it differed according to their respective charters, customs, and constitutions. In some, the right of voting resided in the freemen or liverymen; in others, it was vested in the occupiers of certain ancient tenements called burgage tenements; and in others, again, all who occupied a house, or even an apartment in a house, were entitled to vote. The Reform Act abolished the greater number of these qualifications for the future; but it preserved entire the rights of the then existing voters. At present, therefore, no person is entitled to vote in the election of members for any city or borough, except in respect of some right conferred by the Reform Act, or as a burgess or freeman, or (in the case of a city or town being a county of itself) as a freeholder or burgage tenant: provided, nevertheless, that all the *present* electors (*i. e.* persons who, at the passing of the Act on 7th June, 1832, were electors) shall continue during their lives to exercise their right, at least if they so long remain qualified, according to the usage or custom of their respective cities or boroughs, or according to any law then in force, and shall also duly comply with the provisions of the Act in regard to registration: but no person is to be registered in any year unless he shall, on the last day of July in such year, be qualified in such manner as would entitle him to vote if such day were the day of election, and the Act had not been passed; nor unless such person (where his qualification shall be in any city or borough) shall have resided therein for six calendar months next previous to the last day of July in such year, or within seven statute miles of the place where the poll has theretofore been taken; nor unless such person (where his qualification should be within any place sharing in the election for any city or borough) shall have resided for six calendar months within such place, or within seven statute miles of the place sharing in the election; and if any person neglect to have his name registered in respect of his reserved franchise for two successive years

it is lost for ever, unless such omission arise in consequence of the elector having received parochial relief, or in consequence of absence in his Majesty's naval or military service.

Under the new franchise, which is the only franchise in the boroughs created by the Reform Act, and which is given to all the older ones (with the exception of the Universities of Oxford and Cambridge, in which no change was made) in addition to the other franchises previously existing, all persons who occupy within any city or borough, as owners or tenants, any house, shop, or other building, being, either separately or jointly with any land within such place, also occupied by them as owners or tenants under the same landlord, of the clear yearly value of not less than 10*l.*, are, if duly registered, entitled to vote in the election of a member or members for such city or borough; and it is further enacted, that persons, being the *joint* occupiers or owners of premises within a city or borough, shall each be entitled to vote, provided the clear yearly value of the premises when divided among them give to each a sum of not less than 10*l.* : \* no person, however, is entitled to be registered in any year unless he has occupied or owned such premises for 12 calendar months previous to the last day of July in such year, nor unless such person (where such premises are situate in any parish or township in which there shall be a rate for the relief of the poor) shall have been rated in respect of such premises, nor unless he shall have paid, on or before the 20th day of July in such year, all the poor rates and assessed taxes which may have become due in respect of such premises previously to the 6th day of April then next preceding. It is also necessary for the voter to have resided in the place for which he claims to vote six months previously to the 6th day of July in such year, or within seven statute miles thereof. It is not necessary, however, for him to have resided the whole of the time on the same premises; it is sufficient if the premises are within the borough, and have been occupied in immediate succession, and that all the rates and taxes have been paid. If persons are omitted in the rate, the Act gives them a power to insist on being rated; with this proviso, that, where under any Act of Parliament the landlord is liable for the poor's rate, the fact of rating the tenant, though the tenant insist on being so rated, shall not be taken to exempt the landlord from his liability in case the tenant fail to pay.

The Act also declares, that in every city or town being a county of itself, in the election of members for which freeholders or burgage tenants either with or without any superadded qualification, have a right to vote, every such freeholder or burgage tenant shall have a right to vote, if duly registered: but no person is to be registered in any year in respect of any freehold or burgage tenement, unless he shall have been in actual possession, or in receipt of the rents and profits thereof, for 12 calendar months next previous to the last day

\* This is one of the clauses under which fictitious voters are most easily manufactured. Ten individuals, the partisans of a particular family or candidate, join together and buy (or perhaps receive as a *douceur*) a house or other property in a borough worth 100*l.* a-year, and become, by so doing, vested with the franchise, and yet not one of them may be resident within the borough or have any interest in it: an abuse of this sort should be put an end to.

of July in such year (except where the same shall have come to him by descent, succession, marriage, marriage settlement, demise, or promotion to any benefice in the church, or to any office); nor unless he shall have resided for 6 calendar months, previous to the last day of July in such year, within such city or town, or within 7 statute miles of it.

The Act also makes it necessary that all burgesses or freemen, or freemen and liverymen, shall be duly registered; but no such person is to be so registered unless he shall, on the last day of July in each year, be qualified in such manner as would entitle him then to vote if such day were the day of election; nor unless he shall have resided for 6 calendar months, next previous to the last day of July in such year, within such place, or within 7 statute miles of the place where the poll has theretofore been taken. No person, however, elected or admitted a burgess or freeman since the 1st day of March, 1831, otherwise than in respect of birth or servitude, is to be entitled to vote as such, or to be registered; nor is any person to be so entitled as a burgess or freeman in respect of birth, unless his right be originally derived from or through some person who was a burgess or freeman, or entitled to be admitted as such, previous to the 1st day of March, 1831, or from or through any person who since that time has become a burgess or freeman in respect of servitude. Neither is any person to vote in the election of members for any city or borough (other than a city or town being a county of itself, in the election for which freeholders or burghage tenants have a right to vote) in respect of any estate or interest in any burghage tenement or freehold acquired by him since the 1st day of March, 1831, unless the same shall have come to or been acquired by such person since that day and previous to the passing of the Act, by descent, succession, marriage settlement, or promotion to any benefice in the church, or to any office. It is also provided, that no person shall be registered as a voter, who shall, within 12 calendar months next previous to the last day of July in such year, have received parochial relief or other similar alms.

Subject to these alterations, all the previous laws relating to the qualifications and disqualifications of electors remain in force. Neither was any alteration made in the representation of the Universities. In these the qualification of the electors consists in their having taken the degree of Master of Arts, and being members of the convocation or senate.

*Registration.*—With respect to the lists of county voters, the overseers and churchwardens of every parish are charged with the duty of preparing them every year from claims sent to them by the parties, and from the register of the past year. The lists so prepared are exhibited to public view, and the persons named in them are liable to be objected to either by the parish officers or by third parties.

At the same time of the year, the parish officers and town clerks of cities and boroughs prepare lists of their several electors, which are, in like manner, exposed to public view, that objections may be made or claims put in by those who have been omitted.

*Revision of the Lists.*—During the summer circuits in every year, barristers are appointed, in Middlesex by the Lord Chief Justice; and

in the other counties by the senior judge of assize, to revise the lists of the borough and of the county voters. These barristers make their circuits (of which they are required to give due notice) between the 15th of September and the 25th of October. The lists prepared by the parish officers are then submitted to them, in the counties by the clerks of the peace, and in the boroughs and cities by the town clerks and parish officers. Persons duly objected to are then obliged to establish their qualifications by evidence; and those who claim to be inserted in the list must show themselves entitled to be placed on it. The barristers expunge or insert the names accordingly, and sign the corrected lists. These lists, so settled by the revising barristers, are transmitted (if for a county) to the clerks of the peace, for the purpose of being copied and formed into a methodical register of county electors. The lists of the voters in cities or boroughs are delivered to the returning officers, whose duty it is to copy them in like manner in the form of registers. The lists so copied constitute the registers of electors qualified to vote at any election between the 1st day of November in the year in which such registers shall have been made, and the 1st day of November in the succeeding year.

All expenses incurred by the clerk of the peace of any county or district in causing the lists to be copied out and made into a register or otherwise, are to be defrayed by the treasurer of the county or district, the account having been first laid before the justices at the quarter sessions. The expenses of the revising barristers are paid by the Treasury.

2. *Qualification of Representatives.*—The same circumstances, speaking generally, which disqualify a person from being an elector, disqualify him, also, from being a representative; with this addition, that an alien cannot, even though naturalised, sit in parliament. The judges of the courts of law, with the exception of the Master of the Rolls, are specially disqualified: and this, also, is the case with clergymen; contractors with government; bankrupts; commissioners of excise, customs, and stamps; and a long list of functionaries engaged in the collection of the revenue, in the administration of justice, and in the various departments of the public service. It is now, indeed, become a common practice on creating an office to attach to it such disqualification. But, though reasonable, this jealousy of the Crown is of modern growth, for, at common law, official service under the Crown was not supposed to render a person unfit to represent his fellow-subjects, unless the service were incompatible with his attendance in the House of Commons. Persons convicted of bribery at any election, or of treating the electors, are also incapable of sitting in that parliament. But, with these peculiar exceptions, all persons may sit in parliament of common right; provided, 1st, they engage, "on the true faith of a Christian," to abstain from all designs hostile to the Church (a condition which excludes Jews); and, 2nd, that they have the qualification required by the 1 and 2 Victoria, c. 48, or that they are possessed of 600*l.* a-year, arising out of real or personal property, or both, if knights of the shire, and 300*l.* a-year if burgesses. If a person not so qualified be elected and returned, the return is void. These qualifications, however, are not required in

the case of the eldest sons of peers, of persons qualified to be knights of the shire, or of members for the Universities. The right of the latter to send members is of comparatively recent origin. There is, indeed, an instance in the reign of Edward I., when writs were issued to Oxford and Cambridge requiring the former to send four or five, and the latter two or three, of their most discreet and learned lawyers, to a parliament summoned to consider of that king's title to the crown of Scotland. But it was not till the reign of James I. that the Universities obtained the privilege of each regularly returning two members.

3. *Method of holding an Election.*—Thirdly, and lastly, we have to consider the method of holding an election: for this purpose let us suppose that parliament is dissolved, and that the usual summons calling a new one, has been issued. This is effected by a warrant, or bill, signed by the King, addressed to the Lord Chancellor or the Lord Keeper of the Great Seal as the case may be, directing him on the receipt of it to cause the usual number of writs to be made out and sealed under the great seal; and this he is required to do, by statute, without delay. Between the dates of the writs so to be issued, and the time of their return, a space of 40 days must intervene. The writs, however, are only issued by the Chancellor on the first summons of the parliament; if a vacancy occur during the sitting of parliament, a warrant issues from the speaker under the order of the House, to the clerk of the Crown in Chancery, directing him to issue a new writ for the election of a member to fill up the vacancy. The Speaker is also empowered by statute, during any recess for the space of 20 days or more, whether under prorogation or adjournment, in case any vacancies occur, on certificate thereof being made to him by two members, to issue his warrant in like manner for filling them up; and, to obviate any inconvenience that might occur from the death of the Speaker, his seat becoming vacant, or his absence from the realm, he is to nominate a certain number of members to execute the powers given to him by the Act. The writs thus issued are directed to the sheriffs of the different counties, who, on their receipt, send precepts under their seals, to the proper returning officers of the cities and boroughs within their respective counties, commanding them to elect their members.

The returning officers in the new boroughs are paid by the Act; being usually the mayors (if any) of their respective boroughs.

In the counties palatine the writ is not issued directly to the sheriff, but to an intermediate officer. In the Cinque Ports it is directed to the lord warden.

County elections must be proceeded with by the sheriffs in person: the writ itself does not direct the time, place, or manner of election with minuteness; but these are supplied by several statutes, which ordain, that the sheriff shall, within two days after the receipt of the writ, cause proclamation to be made, at the usual place of election, of a special county court, to be holden there for the purpose of such election only, on any day (except Sunday), not later than the 16th day, nor earlier than the 10th, from the day of making such proclamation. This court, when held for the election of knights of the shire, must be convened at the most usual place.

The election of members for cities and boroughs must take place within eight days from the receipt of the precept, four days' notice being previously given. The persons chosen are to be returned with the precept to the sheriffs.

When the time and place of election either for counties or boroughs have been fixed, all soldiers quartered in the place are removed, at least one day before the election, to the distance of two miles or more, and are not permitted to return till one day after the poll has ended. The House of Commons, to whom alone belongs the determination of contested elections, has voted that no lord of parliament or lord lieutenant of a county shall interfere in the election of commoners; and the lords lieutenant of counties have been debarred by statute from recommending any persons for members. But everybody knows that no attention is paid, or, indeed, could rationally be expected to be paid, to these regulations and enactments. Most peers interfere by means of their agents, and others in their confidence, in county and borough elections; and notwithstanding the changes effected by the Reform Act, the members for several counties and boroughs are now, as formerly, the nominees of peers. It is further enacted, that if any officer of the excise, customs, stamps, or certain other branches of the revenue, presume to intermeddle in elections, by persuading or dissuading any voter, he shall forfeit 100*l.*, and be disabled from holding his office. It has also been enacted, that no candidate shall, after the date, or *teste*, as it is called, of the writs, or the issue of the summons, or after any vacancy (if the parliament be sitting), give any money or entertainment to the electors, or promise to give any in order to his being elected, on pain of being incapable to serve for that constituency in that parliament. And if any money, gift, office, employment, or reward be given to any voter, at any time, in order to influence him to give or withhold his vote, he that takes and he that offers such bribe, respectively, forfeits 500*l.*, and is for ever disabled from voting and holding any office in any corporation, unless, before conviction, he shall discover some other offender of the same kind, and then he is indemnified for his own offence.

On the day fixed for the election, the returning officer first takes an oath against bribery, and for the due execution of his office. It is then usual, in cases where a contest is expected, for the persons intending to be candidates to be proposed by their respective friends; after which they usually address the electors. The returning officer then requires a show of hands on behalf of each candidate, and declares in whose favour it appears to be. If any of the candidates who are in the minority upon the show of hands are dissatisfied with the result, they may demand a poll. It may here be proper to observe, that a candidate is not precluded from offering himself because he is not put in nomination the first day: a new one may be proposed at any time during the poll; but the electors who have once given their suffrages cannot retract or alter them in consideration of that or any other circumstance.

*The Method of Polling.*—The polling is to commence at nine in the forenoon of the next day but two after the day fixed for the election (unless such next day be a Saturday or Sunday, in which case it is to

commence on the Monday following), at the principal place of election, and at the several places to be appointed throughout the county or division; and such polling is to continue for two days only, being successive days, for seven hours on the first day, and eight hours on the second day of polling: no poll is to be kept open later than four in the afternoon of the second day. For the purpose of more conveniently taking the poll, the counties and divisions of counties are divided into districts, and in each district a convenient place is appointed for taking the poll. These districts and places were pointed out by an Act passed in the same session as the Reform Act, which has since undergone some amendments.

The sheriff is empowered to appoint deputies to preside, and clerks to take the poll, at the principal place of election, and also at the places of polling. The poll-clerks at the close of each day's poll inclose and seal their books, and publicly deliver them to the sheriff, under-sheriff, or deputy presiding, who gives a receipt for the same, and on the commencement of the second day's poll delivers them back so inclosed and sealed, to the persons from whom he received them. On the final close of the poll, every such deputy delivers the poll-books so inclosed and sealed to the sheriff or under-sheriff, who receives and keeps them unopened until the re-assembling of the court on the day next but one after the close of the poll (unless the next day but one be Sunday, and then on the Monday following), when he breaks the seals, casts up the number of votes, declares the state of the poll, and makes proclamation of the members chosen.

In all matters relative to the election of knights of the shire, the sheriff, his under-sheriff, or any lawful deputy may act in all places having any exclusive jurisdiction as if they were part of such sheriff's jurisdiction.

The method of taking the poll in cities and boroughs is nearly similar to that in the counties; but the Act 5 and 6 William IV., cap. 36, limits the polling in them to one day, the poll to commence at 8 o'clock in the morning, and to close at 4 o'clock in the afternoon.

If riot or violence occur, whether in counties or boroughs, the sheriff or other returning officer, or his deputy, may adjourn the poll until the day following, and so from day to day until the disturbance ceases; and the days on which the adjournment takes place are not to be reckoned.

The booths are erected at the joint expense of the candidates; but, to prevent imposition, it is enacted, that the cost of a booth erected for a county election shall not exceed 45*l.*, and that of a booth erected for a city or borough election, 25*l.* The deputies also, appointed by the returning officer, are to be paid two guineas each, and the clerks one guinea, at the expense of the candidates.

All inquiry and discussion with regard to the qualification of the voter at the time of the election, is done away with. The only questions to be asked are—"Whether he is the same person whose name appears on the register? Whether he has already voted at that particular place or elsewhere, for the same county or borough? and whether he continues to have the qualification for which his name was originally inserted as a voter?" It is an indictable misdemeanor to answer these

questions falsely. The returning officer or his deputy may also, if called upon by any candidate, administer an oath or affirmation to the same effect ; but no other oath, at least as to the voter's right of franchise, is permitted : the oath or affirmation, however, against bribery, &c., remains unaltered. Scrutiny before the returning officer is also abolished : any person, however, whose name may have been omitted from any register of voters by the decision of the barrister revising the lists, may tender his vote at an election, and the returning officer or his deputy is bound to enter upon the poll-book every vote so tendered ; distinguishing the same from votes admitted and allowed. Upon a petition to the House of Commons complaining of an undue election, the correctness of the register may be impeached, and the name of any person improperly inserted, or improperly omitted, in consequence of the wrong decision of the revising barrister, may, upon the report of the committee appointed to inquire into the petition, be ordered to be omitted or inserted as the case may require ; and the return may either be amended, or the election declared void, or such other order made as may seem proper.

The election being closed, the returning officer in boroughs returns his precept to the sheriff with the persons elected, which he must do six days, at least, before the return of the writ. The sheriff then returns the whole, together with the writ for the county and the knights elected thereupon, to the clerk of the crown in chancery, before the day of the meeting, if it be a new parliament, or within 14 days of the election, if it be an occasional vacancy. The certificate of election is required to be the same both in county and borough elections : it consists of indentures under the seals of some of the electors, and of the returning officer, who seals a counterpart. This practice has been constantly complied with, and seems analogous to proceedings upon inquisition before the sheriff and coroner, who return their inquests under seal. Any other mode of making a return has been held bad, though it admits of amendment.

If the sheriff do not return such knights as are duly elected, he forfeits, by the old statutes of Henry VI., 100*l*. ; and the returning officer in boroughs for a like false return, 40*l*. ; and they are, besides, liable to an action in which double damages may be recovered. Any person bribing the returning officer forfeits also 300*l*. But the members returned by him are the sitting members, until the House of Commons, upon petition, adjudge the return to be false or illegal. The form and manner of proceedings on these petitions will be noticed afterwards, in reference to the proceedings of the House.

It is a settled principle that a member, when once duly elected and returned, cannot resign nor be discharged ; and that he can only vacate his seat by death, or by the acceptance of some office of profit under government, elevation to the peerage, or expulsion. But in practice this difficulty is easily obviated by members who wish to resign applying for the stewardship of the Chiltern Hundreds, an all but nominal office, the acceptance of which vacates the seat of the party receiving it. In ordinary cases this office is always given to any member who asks for it ; and is resigned as soon as the purpose for which it was sought, or the vacating of his seat, has been effected.

A Scotch or Irish peerage does not disqualify a person from sitting in the House of Commons.

The House of Commons claim a right to expel members for disgraceful or otherwise improper conduct. But if the party so expelled be re-elected, the House cannot prevent him from taking his seat, provided he be duly qualified and take the oaths. This point was finally settled in the famous case of Wilkes, in the earlier part of the reign of George III.

If a person be elected for two places, as sometimes happens, he may choose for which he will serve, and a new writ issues for the other; but a member who has once taken his seat, cannot resign it (except by the fiction of the Chiltern Hundreds) for the purpose of being elected for another place.

*Privileges of Members of Parliament.*—It remains only to say a few words on the privileges of members of Parliament, the most important of which is their exemption from arrest. This is to be considered, however, as extending only to arrest on civil process, as for debt, trespass, or contract; not for treason, felony, or breach of the peace, within which term is included the publication of libels; neither is a member protected against being compelled, by process of the courts at Westminster, to obey a writ of habeas corpus or other prerogative writ, directed to him: it has also been determined, that privilege of Parliament forms no ground of exemption from arrest for contempt in disobeying a decree of the Court of Chancery.

Peers, however, it should be observed, enjoy this privilege in right of their peerage, and not as lords of Parliament; all peers, therefore, whether Scotch or Irish, are alike entitled to it. Members of the House of Commons enjoy it only during the actual session of Parliament, and 40 days before and after, to allow them sufficient time to come and go, which, as Parliament is seldom prorogued for more than fourscore days at a time, amounts, in fact, to the whole continuance of one Parliament.

The same regard for the person and character of a peer or member of Parliament makes it a high offence to assault or slander him; and the Houses have frequently taken upon themselves to punish such offenders, where the injury offered is a violation of their known privileges. Reprimand, or commitment to custody have been the ordinary modes of punishment; but the extent of the powers of punishment, and the limits of their jurisdiction, have been the subjects of dispute and discussion continually recurring, and still unsettled.

*Changes effected in the Places returning Members by the Reform Act.*—The form of a writ of summons, which directs the sheriff to make representatives be returned from every city and borough within his bailiwick, would seem to imply a power, if not a duty, to include in his return any new boroughs that should from time to time grow into importance; and such originally was in fact the case, new towns being received into the legislative assembly without any apparent resort to the Parliament for the purpose of sanctioning their enfranchisement; at the same time that boroughs which had fallen into decay were not unfrequently omitted in the sheriff's returns.\*

\* Heywood on Borough Elections, p. 37.

The Act 5 Rich. II., s. 2, c. 4, levelled at the partiality of sheriffs, rendered it thenceforth illegal to omit any place which had been accustomed to be summoned to Parliament; and the Acts of Union with Scotland and Ireland, by fixing the number of members to be sent by each part of the United Kingdom, have been considered as virtually determining the prerogative of summoning any new boroughs.\* Hence it is that, down to the Reform Act, few changes were effected in the representative system since the Revolution, and none without the interference and authority of the Parliament. But the important statute now referred to, made very great changes in the distribution of county members and in the boroughs by which burgesses are returned to Parliament. It wholly disfranchised the following small boroughs:—

|                  |                 |                |                   |
|------------------|-----------------|----------------|-------------------|
| Aldborough,      | Downton,        | Milborne Port, | Stockbridge,      |
| Aldeburgh,       | Dunwich,        | Minehead,      | St. Germain's,    |
| Amersham,        | East Grimstead, | Newport,       | St. Maw's,        |
| Appleby,         | East Looe,      | Newtown,       | St. Michael's, or |
| Beeralston,      | Fowey,          | Newton,        | Midshall,         |
| Bishops' Castle, | Gatton,         | New Romney,    | Tregony,          |
| Blechingley,     | Great Bedwin,   | Okehampton,    | Wendover,         |
| Boroughbridge,   | Haslemere,      | Old Sarum,     | Weobly,           |
| Bossiney,        | Hedon,          | Orford,        | West Looe,        |
| Bramber,         | Heytesbury,     | Plympton,      | Whitchurch,       |
| Brackley,        | Higham Ferrers, | Queenborough,  | Winchelsea,       |
| Callington,      | Hindon,         | Saltash,       | Wootton Bassett,  |
| Camelford,       | Ilchester,      | Seaford,       | Yarmouth, Isle of |
| Castle Rising,   | Lostwithiel,    | Steyning,      | Wight.            |
| Corfe Castle,    | Ludgershall,    |                |                   |

Other boroughs, again, were deprived of one of their members these were,—

|               |                |                |              |
|---------------|----------------|----------------|--------------|
| Arundel,      | Great Grimsby, | Midhurst,      | Thirsk,      |
| Ashburton,    | Helston,       | Morpeth,       | Wallingford, |
| Calne,        | Horsham,       | Northallerton, | Warcham,     |
| Christchurch, | Hythe,         | Petersfield,   | Westbury,    |
| Clitheroe,    | Launceston,    | Reigate,       | Wilton,      |
| Dartmouth,    | Liskeard,      | Rye,           | Woodstock.   |
| Droitwich,    | Lyme Regis,    | Shaftesbury,   |              |
| Eye,          | Malmesbury,    | St. Ives,      |              |

Of the 142 members thus taken away, 65 were given to counties, including the Isle of Wight; and the remainder, with the exception of 13, were given to the following places, viz.:—

*Two Members each,*

|             |               |                   |                    |
|-------------|---------------|-------------------|--------------------|
| Birmingham, | Finsbury,     | Manchester,       | Stroud,            |
| Blackburn,  | Greenwich,    | Mary-le-bone,     | Sunderland,        |
| Bolton,     | Halifax,      | Oldham,           | Tower Hamlets, and |
| Bradford,   | Lambeth,      | Sheffield,        | Wolverhampton.     |
| Brighton,   | Leeds,        | Stockport,        |                    |
| Devonport,  | Macclesfield, | Stoke-upon-Trent, |                    |

*One Member each,*

|                    |                |                 |             |
|--------------------|----------------|-----------------|-------------|
| Ashton-under-Lyne, | Frome,         | Merthyr Tydvil, | Wakefield,  |
| Bury,              | Gateshead,     | Rochdale,       | Walsall,    |
| Chatham,           | Huddersfield,  | Salford,        | Warrington, |
| Cheltenham,        | Kendal,        | South Shields,  | Whitby, and |
| Dudley,            | Kidderminster, | Tynemouth,      | Whitehaven. |

\* See, however, *Palgrave's Right of Dormant Boroughs*. Lond. 1830.

Besides these alterations, other boroughs were extended so as to increase the elective body.

The 13 members unaccounted for in the above summary were transferred, 8 to Scotland, and 5 to Ireland.

*Account of the Counties of England and Wales which send Members to Parliament, of the Number of Members sent by each, the Population of each County in 1851, deducting that of the Boroughs returning Members, the Number of Registered Electors in each County in 1851-52, and the Number of Polling-places.*

| Counties.             | Population of Counties in 1851, deducting the Population of the Boroughs sending Members to House of Commons. | Number of Members. | Registered Electors in 1851. | Number of Polling Places. |

**SECT. 3.—*Procedure in Parliament.***

When the two Houses have assembled at Westminster, on the day appointed for their meeting, the Lord Chancellor acquaints the Lords, that his Majesty, not thinking fit to be personally present, had been pleased to cause a Commission to be issued under the Great Seal for the opening of Parliament. The Lords Commissioners then send a message to the Commons, desiring their immediate attendance in the House of Lords. When the commission has been read by the clerk, the Lord Chancellor states that his Majesty will declare the causes of calling the Parliament, when the members of both Houses shall be sworn; and it being necessary that a Speaker of the House of Commons should be first chosen, he informs the members of that House that it is his Majesty's pleasure that they do choose their Speaker, and present him for approbation on a day mentioned. On their return, the Commons proceed to the choice of a Speaker, while the Lords are taking the oaths. At the time appointed for presenting the Speaker for his Majesty's approbation, the Lords Commissioners again desire the attendance of the Commons, when the Speaker acquaints their Lordships that he has been chosen, and expresses a sense of his incapacity to discharge the duties of the office: the Lord Chancellor assures him of his Majesty's approbation; on which he lays claim, on behalf of the Commons, to all their ancient and undoubted rights and privileges; which, being confirmed by the Lord Chancellor, he retires, accompanied by the Commons, and takes the oaths before any other member.

The ceremony of swearing occupies two or three days, after which the King, either in person or by commission, declares the causes of calling the Parliament in what is familiarly known as "the Speech." From this time the business of the session is practically commenced.

The Lords then adjourn to unrobe, and on the House being resumed, the Lord Chancellor reports his Majesty's speech, which is read by the clerk, and some peer moves that a humble address be presented, expressive of their thanks. On returning from the Upper House, the Commons read a bill, in order to preserve the privilege of not giving priority to the King's speech. They then, in the same manner as the Lords, vote an address. The address having been agreed upon by the respective Houses, each appoints a deputation to attend the King, and learn when it will be his pleasure to receive them; and at the time appointed they are presented, the members of each House accompanying their address in a body.

The House of Lords, before entering on the business of the session, appoints committees of privileges and for religion: committees sit in rooms near the Houses, several frequently sitting at the same time; a committee cannot, however, sit while the House, of which it is a committee, is sitting, unless by special leave.

In the committees of the Commons, a member is usually selected as chairman for the occasion, who, like the Speaker, has a casting vote. The method of proceeding in committees, will be noticed afterwards.

The method of proceeding with business is nearly the same in both Houses. The usual time for their assembling is four o'clock, but the House of Lords, on certain days of the week, meets earlier for the purpose of transacting business in its judicial capacity. In the Upper House three peers constitute a quorum; in the Commons, 40 members must be present. Before any business is entered upon by either House, prayers are read; in the Lords by a bishop, in the Commons by their chaplain. In the Commons, a few minutes before four, the Speaker takes his place at the upper part of the table on the right; the chaplain of the House being placed also at the upper part of the table, on the left: as soon as prayers have been read, the Speaker standing before the chair, proceeds to count the House, including himself, when, if 40 members be present, he takes the chair, and the mace is laid before him on the table: the House is then said to be constituted. If there be not 40 members at four o'clock, the Speaker declares the House adjourned to the next day of sitting; and for this purpose he also takes the chair, such being the standing order of the House. In the Lords, a peer brings in a bill without obtaining leave; he must, however, give notice of his intention. In the Commons, when the bill to be introduced relates to public matters, with the exception of supply as will be mentioned afterwards, it is necessary for the member bringing it in to move for leave, which motion is printed in the votes for the information of members. On the day fixed for making the motion, he briefly states the principle and object of the bill, and moves for leave to introduce it; if the House consent, an order for its introduction is made, and, at the time appointed, the bill in manuscript is brought in, with blank places left for the insertion of anything that may be doubtful, such as dates, &c. The introducer then moves that it be read a first

time, which being seconded, a debate, if the bill is opposed, usually ensues; after which, the question is put, and, if carried, an order is made for the printing of the bill, and a day is fixed for the second reading. After the second reading the bill is committed to a committee of the whole House; on some occasions to a select committee, whose report, when made, is proceeded with, as if the bill had been then read a second time. To form a committee of the whole House, the Speaker quits the chair, and may debate as a private member; when the House sits in committee, the mace is always taken off the table. In the Lords some peer, as already stated, is appointed chairman of committees for the session. In the Commons, a member is chosen for the occasion. In these committees, the bill is debated clause by clause, amendments made, the blanks filled up, and sometimes the bill entirely new modelled. If there be not time for the consideration of all the clauses at one sitting, the Speaker having again taken the chair, the chairman of the committee reports progress, and asks leave to sit again. The principal advantage of a committee consists in the greater freedom of debate; a member, for instance, in committee is not restricted to speaking once only on the same point: a committee, too, admits of inquiries being made, and questions being put on each separate clause, which could not generally be done in the House itself. It can, however, do so (but this seems the only exception) on a report being brought up from a committee. When every clause has been gone through and agreed on in committee, the report is brought up, that is, the bill, with all the amendments made in it, and a day fixed for taking the report into consideration. Frequently, indeed, the Speaker at the time takes the chair, and the House being then resumed, progress is reported. When the report is brought up at a future day, the House considers the whole bill again; and the question may, if it be deemed necessary, be put upon every clause and amendment. When the House has agreed or disagreed to the amendments of the committee, and perhaps added new amendments of its own, the bill is ordered to be engrossed, which is done on one or more long rolls of parchment sewed together, and a day is fixed for the third reading. If the third reading be agreed to, the House proceeds to consider whether it shall pass the bill to which it has agreed; when further amendments are not unfrequently again made. The Speaker then, as on its passing the former stages, opens the contents of the bill, and, holding it up in his hands, puts the question, whether it shall pass. These several readings take place at stated intervals; but there are precedents in cases of emergency, of bills being read twice, and even three times on the same day.

When a bill has thus passed through the House in which it was introduced, if it be the Lords it is indorsed "*soit baillé aux Commons*," and sent down to the latter by their messengers accordingly. A bill that has passed the Commons is, in like manner, written on by the clerk, within, on the top of the right-hand side, "*soit baillé aux Seigneurs*." It is carried up to the Lords by eight or more of the members of the House, and not, as in the case of a bill sent to the Commons, by an official messenger. It then passes through the same forms in the House to which it is sent, as it did in the House from

which it came (except the engrossing, which has already been done): if it be rejected, no notice is taken thereof, which prevents unbecoming altercations. If it be agreed to, the House in possession of the bill sends a message to the other House, stating that they have agreed to the same. The Lords, should they send the message, retain possession of the bill, unless it be a money bill; but if the Commons send the message, the bill is returned to the Lords. Should any amendments be made by the House to which the bill is carried, these are sent, along with the bill, to receive the concurrence of the House from which it was brought; and if that House agree to them, it sends a message to that effect to the other. If the amendments are disagreed to, a conference is requested between the Houses, at which, in general, the matters in dispute are adjusted; if, however, both Houses remain inflexible, the bill is dropped. All bills that have passed both Houses are deposited with the peers to await the Royal assent, except in the case of a bill of supply, which, after receiving the concurrence of the Lords, is always sent back to the Commons. When a bill has passed one House, and been sent to the other, and the provisions of the bill have been founded, not upon facts of general notoriety, but upon special facts that must necessarily be proved by evidence, it is usual for the House to which the bill is sent, to ask, either by message or at a conference, the grounds and evidence on which the bill has been passed; and this evidence, whether arising out of papers or from the examination of witnesses, is immediately communicated: but, farther than this, it is irregular for either House to inquire why the House in which the bill took its rise passed it in such or such a manner; nor would it be permitted to acquaint the House to which it is sent that it had passed unanimously. A bill may be opposed in any of its three stages, but the most usual time for opposition is at the second reading. If the principle of the bill, however, is not objected to, it is usual to allow it to pass this reading also, for the purpose of its being committed, in the hope of removing in the committee the objectionable parts. When a bill has been thrown out, it should not be again brought in during the same session. This rule, however, is sometimes evaded.

In passing private bills, great care is used that no one may be taken by surprise. Such bills are not allowed to be introduced on mere notice of motion, but a petition must be presented, in which the grievance desired to be remedied must be set forth. This, if it be founded on facts of a disputable character, is then referred to a select committee, who examine into the matter alleged, and, if necessary, hear counsel for and against the petition. When the committee have made their report, then, or, if no reference be necessary to a committee, upon the petition itself, leave is given to bring in the bill.

To hinder the time of the House being too much occupied by private bills, some period is usually fixed at the commencement of a session, after which no petitions for private bills are received.

In the Lords, if the bill begin there, it is referred, when of a private nature, to two of the judges, to examine the facts alleged, to see that all necessary parties consent, and to settle all points of technical propriety. In many cases where different interests are affected, as in in-

closure and railway bills, it is necessary that notice should be previously given to all parties interested, both of the intention of applying for a bill, and of its purport and effect. Besides which, three days must elapse; and the committee to which it is referred, and which must be composed of eight members at least, are not allowed to sit until a week's notice has been given by a paper posted up in the lobby. If the opposition be to the principle, or to the whole of the bill, the parties opposing it should present a petition to be heard against it by counsel at the bar of the House before the second reading; though instances have occurred of this indulgence being granted on bringing up the report of the committee, and even on the third reading. If they do not object to the principle of the bill, but to particular clauses only, they should pray to be heard against it before the committee, to whom their petition, together with the bill, will then be referred.

Each House has an equal right to originate and pass bills; except, as previously stated, that the Lords claim the exclusive right of originating bills for restitution of honours or of blood, and the Commons of all bills of supply. Bills, also, which have for their object the regulation of such matters as relate more particularly to one House than the other, ought, it would seem, to originate with that House to which they more peculiarly belong.

There is, however, one bill which begins neither with the Lords nor Commons, but with the Crown, viz., a bill for a general pardon. This is first signed by the Crown: it is then transmitted to both Houses of parliament, in each of which it is only read once. It must afterwards, however, receive the King's assent, like other public bills.

With regard to the important privilege assumed by the Commons of introducing all bills relating to money matters, we may observe that it was a standing order of the House, so long ago as 1667, "That no motion or proposition for an aid or charge upon the people should be presently entered upon, and that all such propositions should receive their first discussion in a committee of the whole House." Upon the same principle, viz., "that when money is to be raised upon the subject, the proposition should have the fullest and most frequent discussion," the Commons have determined "that no bills for any work proposed to be carried on by tolls or duties to be levied in particular places should be brought in until the petition for the bill has been referred to a committee and examined." And not only must all propositions with respect to the public supply be discussed, but they must also take their rise in a committee of the whole house.

The usual method is, for the Chancellor of the Exchequer, at the commencement of the session, to move that the House resolve itself into a committee to take into consideration that part of the King's speech relating to supply; and this being done, and the part of the King's speech relative to the estimates read, the quantum of supply is moved and considered. The committee of supply, as it is appointed only to consider the supply of the aids demanded by the Crown, can properly have no cognisance of any matters but such as are laid before the House by direction of the Crown: if it be thought necessary, therefore, to raise a sum of money not required by the Crown for public service, such grant cannot be moved in the committee of supply.

Another rule requires that the House shall receive no petition for any sum of money relating to public service, except it be recommended by the Crown; and the uniform practice has been to apply this order to all petitions for public money, whether the grounds of such applications be public or private: it is usual, therefore, for all grants of the public money to come recommended by a message from the Crown, which at once gives the committee cognisance of them. When the resolution that a certain sum be granted is reported to the House, and agreed to, it is then referred to another committee, which is also formed of the whole House, termed the committee of ways and means, to consider how the grant is to be raised. This committee, like the former, being for a specific purpose, cannot consider the means of raising any sum not included in the vote of the committee of supply; and, to enable them to do so, the matter must be specially referred to them by the House. The better way, however, seems to be to refer it to a committee of the whole House appointed for the particular purpose. Another rule of the Commons is, that, pending a bill for imposing any tax or duty, no petition against it shall be received, the object, apparently, being to hinder the time of the House being wasted by considering the petitions of interested parties. This rule, however, does not extend to petitions from the city of London. The latter are not opened by a member, as on other occasions, but are brought at once to the bar of the House by the sheriffs, who, without any question being put, deliver the petition to the clerk, who brings it to the table; after which, the sheriffs having withdrawn, the Speaker puts the question whether the petition be read; the question, as a matter of course, is carried in the affirmative, and then, and not until then, the House become acquainted with its contents, and dispose of it as they think proper. Petitions may, however, be presented in any subsequent session, praying the repeal or reconsideration of any taxes imposed in a former one.

Bills of supply, like all other bills, are sent up to the Lords, by whom they are either unconditionally assented to, or unconditionally rejected. The Lords have never, indeed, expressly waived the right to modify or alter such bills, but they have not for a considerable period attempted to exercise it. If they did, the bills so modified or altered would, on being sent back to the Commons, be thrown out as a matter of course, without considering the amendments. On more than one occasion, however, when the amendments made by the Lords appeared to be reasonable, the Commons have embodied them in new bills, and sent them in that form to their Lordships for their concurrence. Hatsell, in his *Precedents of Parliament*, has laid down the following rules in regard to the right of interference by the Lords:—

1st. That in bills of aid and supply, the Lords, as they cannot begin them, so neither can they make any alterations, either as to the quantum of the rate or its disposition; or, indeed, any amendment whatever, except in correcting verbal or literal mistakes; and even these the House of Commons direct to be entered specially in their journals, so that the nature of the amendments may appear, and that no argument prejudicial to their privileges may be afterwards drawn from their having agreed to such amendments.

2nd. That in bills which are not for the special grant of supply, but which, nevertheless, impose pecuniary burdens on the people, such as bills for turnpike roads, for canals, for paving, for managing the poor, &c. &c., for which purposes tolls and rates must be collected, in these, though the Lords may make amendments, their amendments must not make any alteration in the quantum of the toll or rate, its disposition or duration, or the persons, commissioners, or directors appointed to manage it. In the parts and clauses of these bills, not relative to any of these matters, the Commons have not objected to the Lords making alterations or amendments.

3rd. Where the bills, or the amendments made by the Lords, appear to be of a nature which, though not immediately, yet in their consequences may bring a charge upon the people, the Commons have denied the right of the Lords to make such amendments, and the Lords have acquiesced.

Lastly, the Commons insist, that the Lords have no right to insert in a bill pecuniary penalties and forfeitures; or to alter the application or distribution of the pecuniary penalties or forfeitures which have been inserted by the Commons.

Following out these assumptions, the Commons have sometimes attempted to tack, as it is termed, bills relating to entirely distinct matters to bills of supply, in the hope of having them carried through the Lords unaltered, under cover of the latter. Such attempts have however, been always considered as highly irregular, as well as unconstitutional, and have not for a long time been resorted to.

It is a rule in both Houses, that no member shall speak twice on the same question, except in committee, unless it be to explain or reply.

If an amendment be proposed, a member, after he has previously spoken on the original, is entitled to speak again upon the question of the proposed amendment, which is always put before the original question.

No member is allowed to interrupt another who is in possession of the House, unless he rise to speak to order, which may be done at any time.

When any member is personally interested in a question, it is a rule that he withdraw after speaking, and, in matters of consequence, this rule is supposed to be strictly enforced; but except in peculiar cases it is, in truth, rarely attended to. It is of every day occurrence for members deeply interested in railways, for example, to vote in favour of their own, and against opposing lines.

To preserve the freedom of debate, and to secure the independence of the two Houses, it is established that no notice whatever is to be taken by any of the branches of legislature of what is passing, or, indeed, of what has passed, before the others, until formally communicated in the due course of parliamentary proceeding.

The freedom of speech allowed to the members does not authorize them to use improper, that is, treasonable, seditious, or ungentlemanlike language; and those who do so may be called to order by the Speaker or by any one else. And it is, also, to be observed, that though a member in a debate in the House may state what he pleases, provided

he be not called to order, in regard to the conduct and character of others, this privilege does not extend further. If a member publish his speech he loses that protection so necessary for the freedom of debate. He then addresses the public and not the House of Commons; and having, in this way, waived his privilege as a member of the latter, he must answer, like any other individual, for the statement he has made. (*May, on the Privileges, &c., of Parliament*, p. 81.)

No member of either House is allowed to state what the King's opinion may be on any measure while under consideration, nor even, indeed, to mention his name. The King may, however, if personally interested, or if the measure relate in any way to his prerogative, direct his ministers to signify his acquiescence; and it is, as already stated, a standing order of the House of Commons, that it will receive no petition for money relating to public service unless it be recommended by the Crown: as soon, therefore, as any petition of this nature is offered, the Chancellor of the Exchequer, or some other member acquaints the House, that his Majesty having been informed of its contents, recommends the same to its consideration.

If, in the course of a debate in one House, any reflections be made upon the other, the member making them should be called to order at the time; as no notice can be taken of them afterwards. Attempts have been sometimes made by one House to obtain redress from the other, but always without success.

In a parliamentary sense, indeed, each House is presumed to be ignorant of what takes place in the other; the proceedings in each being supposed to be always carried on with closed doors. It has, it is true, long been the custom to admit strangers, and, in particular, to afford every facility to persons engaged in reporting the speeches of the members, for the use of the public; but this, by a convenient though clumsy fiction, is not supposed to be known to the House; and any member may at any time insist on having the House cleared. When the House divides, this is always done.

If members stay in the country, or absent themselves from their duties, the House may be called over; and it is sometimes ordered "that no member shall go out of town without leave of the House, and that to be obtained on motion in the House." When a call of the House is ordered to be made, a resolution is passed at the same time, "that such members as shall not attend at the time appointed, be taken into custody." Notice is, of course, previously given to each member.

In putting the question, the rule is, that the question which is first moved and seconded, be first put. The way is, for the member who moves to write down his motion and hand it to the Speaker, who, when it has been seconded, proposes it to the House, which is then said to be in possession of the question. A question cannot, after it has been proposed, be withdrawn without leave of the House; but if, as not unfrequently happens, a question be proposed on which the House does not wish to give an opinion, it is avoided by some member moving an adjournment, or that the orders of the day be read, or the previous question; which motions take precedence of all others. In committee,

instead of the motion to adjourn it is usual to move that the House do resume, which amounts to the same thing.

The right, however, of making a motion for the orders of the day being read, does not hold when the House is actually proceeding upon one of them. Another way of getting rid of a question is to propose such an alteration, by way of amendment, as is incompatible with the nature of the original question; as, that a bill be read that day six months; in which case, also, the question on the amendment takes precedence of the original motion.

In putting the question, points of great nicety occur as to the form and method; but with these we need not trouble the reader.

The Peers vote by the words "content" and "not content;" the Commons, by the words "aye" and "no." Down to 1836 the practice in the Commons was for the Speaker to send one party into the lobby the other remaining in the House; but now there are two lobbies, and on a division the Speaker directs the "ayes" to go into one lobby and the "noes" into the other; and he then appoints two tellers for each party, of whom one for the "ayes" and another for the "noes" are associated, to check each other in the telling. In the House of Lords the votes are taken commencing with the puisne lord. Peers not present at a division may vote by proxy, that is, they may authorize some other peer who is present to vote for them; but this privilege extends only to votes of the House, and not to votes of committees, from which proxies are excluded. The privilege is, moreover, of very questionable policy. That a person who has not heard a debate, and who may not, perhaps, be at the time in the kingdom, should notwithstanding be entitled to vote on the question, is a proceeding not very reconcilable either with sound principle or common sense. The peers, also, enjoy the less questionable privilege of entering in the journals of the House a protest against any measure of which they disapprove, with reasons for doing so. When a division takes place, the Houses are always cleared of strangers, and the doors closed, so as to prevent members coming in or going out; it being an established rule, that none who did not hear the question put shall be allowed to vote; and that none who did, and were in the House at the time, shall be allowed to withdraw without voting. If, through mistake, members intending to vote with one party go with the other their votes are reckoned with the latter, however opposed to their opinions.

*Committees.*—Many of the rules relating to committees have already been incidentally noticed. Committees, at the will of the House, assert the power to summon and enforce the attendance of witnesses, and the witnesses attending cannot be arrested either on their coming or going; if they be, the House will, on motion, order them to be discharged. Officers too may be summoned to attend with the books of a corporation, &c.; and if any one directly or indirectly attempt to prevent a witness from appearing or giving testimony, or tamper with him in respect of the evidence to be given, the House will proceed against him with severity, as it will also against the witness himself if he give false testimony.

All committees, excepting those appointed to inquire into the return of a member, cease *ipso facto* on a prorogation or adjournment of parliament.

There is this difference between committees of the Lords and Commons, that the former examine witnesses upon oath, which is not done by the latter, with the exception of committees on disputed elections.

The validity of the return of members to the House of Commons when objected to is inquired into and adjudicated upon by committees of the House appointed for the purpose, under various statutes to which it is useless to refer in detail. The return is usually questioned on the ground of some irregularity in making it out; of riot, by which voters were prevented from coming to the poll; or of bribery and treating, the latter being by far the most common ground of objection. Notwithstanding the efforts that have been made to render them impartial, the impression continues to be that the decisions of election committees are influenced more by political biases than by regard to the merits of the cases brought before them. The law as to bribery and treating seems also to stand much in need of amendment. A landlord or great manufacturer supports a candidate on the implied, perhaps, but often also on the agreed and distinctly understood condition, that if the candidate in question be returned, he will do his best to promote the views of the individual supporting him, by recommending his family or connexions to government, or to the leaders of his party, as deserving of their especial support and patronage. This is held to be a fair legitimate transaction; but if so, if a commission in the army, or a place in the customs or excise may be thus virtually bargained for, where is the justice of prosecuting and punishing the needy tradesman or shopkeeper, who contents himself with stipulating for payment of some 5*l.* or 10*l.*? The fact is, that it is altogether impracticable to put down bribery at elections, taking the word in its enlarged sense. Where poor men have that in their possession which rich men are eager to acquire, it is the merest drivelling to suppose that it is possible to hinder the former from selling, and the latter from buying. A traffic in votes has always been, and always will be, practised indifferently by all parties. We doubt whether the institution of prosecutions has the slightest influence over its amount. It, no doubt makes the traffic be transacted less openly, and tends to make the disgrace, like that attaching to theft in Sparta, be applied rather to the circumstance of its being so clumsily conducted as to lead to a discovery, than to the perpetration of the offence! There is no way by which to lessen treating and the direct buying of votes except by establishing a property qualification, and conferring the franchise on those only who may be presumed to be in a condition above being influenced by pots of beer and small sums of money.

Both Houses possess judicial authority so far as is necessary for investigating all matters relating to themselves or their privileges, and, with the exception of the Commons not administering oaths, exercise all the powers requisite for that purpose, as taking persons into custody, examining witnesses, compelling the attendance of parties, the production of books and papers, and other matters of evidence, discharging,

reprimanding, and, if necessary, imprisoning offenders. The House of Lords is, indeed, one of the regular courts of justice, which the House of Commons is not: so far, however, as relates to the power of the former in asserting and vindicating its privileges, it should, perhaps, rather be considered, like that of the House of Commons, in the light of a parliamentary prerogative, than as an exercise of its functions as a court of justice.

*Conferences.*—A Conference, if it be on the subject of a bill depending between the two Houses, must be demanded by that House which, at the time of asking it, is in possession of the bill. The subjects upon which conferences are most frequently demanded are where amendments have been made by one House to a bill passed by the other, to which amendments the House desiring the conference has disagreed. When either House sends a message to the other stating that they disagree to the amendments, they may desire a conference; if they neglect doing so the bill is returned, that the due course of parliament in transacting matters of this nature may be observed. If the House which amends the bill be not satisfied by the reasons given for disagreeing to the amendments, and perseveres in them, it may desire another conference, at which its speakers may state their arguments in favour of the amendments, and the reasons why they refuse to depart from them; and if, after such second conference, the other House insist upon disagreeing to the amendments, they may demand a “free conference,” at which the arguments on both sides may be more amply and freely discussed: if this prove ineffectual the bill must be lost. The privilege of naming the place of conference belongs to the Lords. In demanding conferences, the subject on which they are demanded should be distinctly stated. Managers are appointed by the respective Houses, and before they go, if it be not a free conference, the House demanding the conference appoints a committee to draw up the reasons which they offer in support of their measure. These reasons being reported from the committee, and agreed to by the House, are delivered to the managers of the conference that they may communicate them to the managers of the conference on the part of the other House: all the managers have to do is on the one side to state, and on the other to receive, the reasons given; the managers then communicate them to the House by which they have been sent; so that these conferences are, in fact, nothing more than a method of formally communicating the reasons of one House to the other. At a free conference, the arguments on both sides are more freely discussed and gone into. In all conferences the number of the managers on the part of the Commons doubles that of the Lords.

#### SECT. 4.—*Adjournment, Prorogation, and Dissolution of Parliament.*

It remains, lastly, to describe the method of adjourning, proroguing, and dissolving parliament.

An adjournment, as the term imports, is merely a prolongation of the session from day to day, or sometimes for ten days or more as at Christmas and Easter. It is effected by the authority of each House

separately ; the adjournment of one House being no adjournment of the other.

A prorogation, on the other hand, is the continuance of a parliament from one session to another : after a prorogation all bills that are only begun but not perfected, must be resumed *de novo* (if at all) in a subsequent session ; but after an adjournment all things continue in the same state as at the time of the adjournment, and may be proceeded in without any fresh commencement. A prorogation is 1. by the King's command pronounced in his presence by the Lord Chancellor to both Houses ; or, 2. By writ under the great seal, directed to the Lords and Commons ; or, 3. By commissioners appointed under a special commission for the purpose. The first is the usual way of proceeding, when the parliament is prorogued at the close of the session. Prorogation by writ does not take place, except upon the meeting of a new parliament, after a general election, and before a speaker of the House of Commons is chosen : on this occasion, when the members of the House of Commons come to the place appointed for administering the oaths by the Lord Steward, or his deputies, they are informed that the parliament is to be prorogued by writ, directed to the Lords and Commons. They then proceed directly without entering their own House, or awaiting any message from the Lords, to the House of Peers, where the writ for proroguing the parliament is read. Proroguing by special commissioners is the usual way, when parliament meets from time to time during the recess. Parliament is never prorogued during the recess, but for about a couple of months only ; when, unless anything particular occurs, it is again prorogued for a similar period, and so from time to time, until it meet for the usual yearly business. In times of actual rebellion, or imminent danger of invasion, if the parliament be separated by adjournment or prorogation, the King may call it together by proclamation, with 14 days' notice of the time appointed for its reassembling.

A dissolution is the civil death of parliament, and may be effected in three ways :—1. By the King's pleasure ; 2. By the demise of the Crown ; and, 3. By efflux of time.

1. It is the acknowledged prerogative of the sovereign to dissolve parliament at his pleasure, and this as well during an actual session as during an adjournment or prorogation. Since the Revolution, the unvaried practice has been to prorogue the parliament in the first instance to a certain day, and then, before the time of meeting arrives, to issue a proclamation declaring it dissolved. This is adopted as the most delicate and indirect mode of executing an unpleasant measure, which a dissolution is supposed to be.

2. The other method of dissolution, viz., by demise of the Crown, formerly happened immediately on the death of the reigning monarch ; but this being found inconvenient, it was enacted by the statutes 7 & 8 Will. III., and 6 Anne, that the parliament in being should continue for six months after the death of any king or queen, unless sooner prorogued by the successor ; that, if the parliament be at the King's death separated by adjournment or prorogation, it should, notwithstanding, assemble immediately ; and that, if no parliament be

then in existence, the members of the last parliament should assemble and be again a parliament.

3. A parliament may expire by length of time. The law, commonly called the Septennial Act, limits the duration of parliaments to seven years, to be reckoned from the day on which, by the writs of summons, they were appointed to meet. Before the Triennial Act of William and Mary, passed in 1694, there was no legal limitation of time for the duration of parliaments; and, in fact, the parliament which was elected in 1661, soon after the Restoration, was not dissolved till January 1678-9, having continued nearly eighteen years. The acts in force before the reign of William did not limit the maximum duration of parliaments to three years, but provided only that their sittings should not be suspended beyond that term.

*Table of the Duration of Parliaments from the 1st of Henry VIII., when Long Parliaments were first introduced, to the end of William IV.*

| Met.                 | Dissolved.         | Existed. | Met.                                           | Dissolved.         | Existed. |
|----------------------|--------------------|----------|------------------------------------------------|--------------------|----------|
|                      |                    | V. M. D. |                                                |                    | V. M. D. |

## CHAPTER III.—OF THE EXECUTIVE.

SECT. 1.—*The King, his Duties, Prerogatives, and Ministers.*

THE executive power, according to the British constitution, both in respect of foreign and domestic affairs, is vested in the King or Queen regnant; males and females being equally capable of ascending the throne of these realms. In all acts of parliament, indeed, the term king is taken as including that of queen, and conversely. But, as previously observed, the King performs all executive acts by means of ministers or recognised officers and agents, responsible to the parliament and the country for their proceedings. Hence, his powers are principally manifested in the selection of his ministers and councillors, and even as regards them his choice is comparatively limited.

The succession to the Crown of England has been for ages hereditary, except in so far as it may be controlled and limited by the intervention of parliament. This, however, has not always been the case. Under the Saxons the Crown was elective; and under the earlier princes of the Norman line the succession does not appear to have been regulated by any fixed principle. It is remarked by Mr. Allen that Richard I., who succeeded Henry II. in 1189, is the first King of England who ascended the throne without the form at least of an election, and without any interval having elapsed between the death of his predecessor and his own accession. (*Rise and Growth of the Prerogative*, p. 47.)

The descent of the crown differs, however, in several respects from the rules of inheritance in ordinary cases; descending, for example, to an eldest daughter and her issue, in preference to her sisters. Neither is there any legal infancy in the case of an heir to the crown; and hence, when its devolution on a minor is an event likely to occur, it is usual for parliament, in the lifetime of the ancestor, or predecessor, to make a special provision to meet the contingency, by appointing a regency until the Sovereign shall have attained a suitable age.

The crown, as limited by the Act of Settlement, 12 & 13 Will. III. c. 2, is vested in the descendants of the Princess Sophia, youngest daughter of Elizabeth, Queen of Bohemia, and grand-daughter of James I., being Protestants; with the proviso, that its possessor shall join in the communion of the Church of England as by law established. And as our old monarchs and their nearest descendants were set aside at the Revolution, the right of the present royal family to the throne depends wholly on this act. They have, therefore, no prerogatives, power, or authority, save what they derive from parliament, or from the consent of the nation. The Stuarts might, had they continued to rule over us, have believed that they had been unjustly deprived of their ancient hereditary rights, and might, consequently, had a favourable opportunity offered, have endeavoured to recover their possession. But the princes of the House of Hanover can indulge in no such fancies or regrets. They are to all intents and purposes creatures of parliamentary law. And it is well for them and for us that such is the case. "It is a rare fortune, and peculiar to England, that we have a family on the throne who have no legitimate preten-

sions to the crown but what they derive from parliament. The Act of Settlement, which is the sole foundation of their title, has cut off all obsolete claims, whether derived from Egbert or the Confessor." (*Allen on the Prerogative*, p. 52.)

On the accession of every prince he is usually crowned; on which occasion he is formally invested with the office, and takes the oath prescribed by the act of 1 W. & M., st. 1, c. 6. This oath binds the Sovereign "to govern the people of this kingdom of England, and the dominions thereto belonging, according to the statutes in parliament agreed on, and the laws and customs of the same; to cause law and justice, in mercy, to be executed in all his judgments; to maintain the laws of God, the true profession of the gospel, and the Protestant reformed religion established by law; and to preserve to the bishops and clergy of this realm, and to the churches committed to their charge, all such rights and privileges as by law do or shall appertain unto them."

The Act of Settlement requires every King of the age of 12 to take this oath, if the coronation has not taken place previously, on the first day of the first parliament after his accession, in the House of Peers, and at the same time to repeat and subscribe the declaration against popery.

The act of coronation was formerly regarded as an important, if not an essential, preliminary to the assumption of the royal character;\* but it has been long settled that the King is, at the instant of his accession without any coronation, to all intents and purposes the Sovereign of these realms; and, though no oath have been administered to him, he is as much bound by its provisions as if he had taken it.

As regards the duties of the King, in the point of view now under consideration, they may be considered as twofold,—1st, in relation to foreign, and, 2ndly, in relation to domestic affairs.

In the intercourse between this and other states, the King represents the nation; and has the sole power of making war and peace. The law will not permit war to be covertly or openly carried on by his subjects or by any portion of them with any foreign nation at peace with this; and by stat. 12 Car. II. c. 4, and 29 Geo. II. c. 16, the King may prohibit the exportation of arms and ammunition. He may also grant what are termed letters of marque, that is, permissions to any of his subjects who have suffered from foreign depredations to make reprisals, and to seize or destroy the property of the subjects of the aggressor nation without incurring the penalties of piracy.

The King has also with the power of making war, the supreme command and disposal of the army and navy; all the officers of which receive their commissions from him, and are subject to his authority. The management of the militia, yeomanry, and other domestic forces, is regulated by various statutes, which, however, distinctly recognize the paramount power of the Crown. The right to the command of the military forces formed one of the disputed questions between Charles I. and his parliament. But at the Restoration, the sole government and command of all forces by sea or land, and of all forts and places of strength was definitively vested in his Majesty and his successors. But, nevertheless, the King cannot embody a single battalion, or send a

\* See *Hardy's Introduction to Close Rolls*, p. 135—137.

single ship to sea, unless the House of Commons furnish him with the necessary supplies.

It is partly upon the same, and partly on fiscal grounds, for the security of the revenue, that the King appoints ports and harbours. He is the presumptive lord of the sea-shore, of all tide rivers, and of the creeks and havens, which are, as it were, the gates of the realm. All legal ports are held to owe their first establishment to the Crown; nor is it lawful, in ordinary cases, to land or to embark at any but an authorized port.

The 1st of Elizabeth, c. 11, and 13 and 14 Car. II., c. 11, § 14, enable the Crown to ascertain the limits of all ports, and to assign proper wharfs and quays in each port for the lading and unlading of merchandise.

The erection of beacons, light-houses, and sea-marks, is another branch of the royal prerogative. For this purpose the King may, by commission under the great seal, make them be erected in convenient places, as well upon the lands of the subject as upon the demesnes of the Crown; a power which is usually vested by letters patent in the office of lord high admiral. The 8th Elizabeth, c. 13, empowers the corporation of the Trinity House to set up beacons or sea-marks wherever they may think them necessary.

To this branch of the prerogative may also be referred the power which the King has, upon reasonable grounds, of compelling his subjects to stay within the realm, or of recalling them from beyond seas. It is true that, by the common law, every man is allowed to go out of the realm at pleasure, without obtaining the King's leave; but the King may, if he think proper, prohibit, by a writ *ne exeat regno*, any subject from quitting the kingdom, or he may send a writ to any subject abroad commanding his return; and, in either case, if the subject disobey, it is a breach of his allegiance, and the offender's lands and goods may be seized until his return; and on his return he is punishable by fine and imprisonment.

As the King has the power of making war, so he has also that of making peace and negotiating treaties. He sends ambassadors to foreign countries, and receives them at home; it is by his authority, also, that passports are granted and safe conduct insured to the subjects of foreign states visiting this country.

In respect of domestic affairs the King, as chief magistrate, summons together the legislature, and prorogues or dissolves it, from time to time, as may be necessary. As conservator of the public peace and guardian of the laws, it is his duty to see that the rights and liberties of his subjects are secured, and that justice is duly administered. But, as already seen, these duties are all performed through the instrumentality of responsible agents, appointed in due course of law. Thus the conservation of the laws is intrusted to judicial officers, such as the lord high chancellor, the judges, the justices of the peace, &c. In pursuance of this duty, writs and mandates of all forms suitable to the grievances complained of may be obtained on the application of the subject, addressed either to the party offending, who is bound to obey, or to some officer of the Crown whose business it is to enforce them. In the further fulfilment of this part of his character, the King has to

prosecute all public offenders ; for which purpose he has his law officers, the attorney and solicitor-general : but, in practice, the duties of these officers are almost entirely confined to offences immediately affecting the interests of the Crown. Ordinary criminal prosecutions, though carried on in the King's name and at his nominal suit, are really promoted by the parties injured, who merely use the King's name for the purpose of putting in motion the process of the law.

It is in the same sense that the King is styled the fountain of justice ; it is from him that all courts, ecclesiastical as well as civil, mediately or immediately, derive their jurisdiction. Down to the reign of Henry III. our kings were occasionally in the habit of hearing and determining causes in person ;\* but for a long time past the whole of their judicial functions have been delegated to the judges appointed by them, or rather by ministers, to preside in the different courts. The latter are the great depositaries of the laws of the kingdom, and have acquired a certain and established jurisdiction, regulated by rules and maxims not to be altered except by parliament. It is a constitutional maxim that the King cannot be sued in any court of law ; but, nevertheless, if any one have a demand against him in point of property, a petition, or plea of right, is due to the claimant, through which he will obtain justice with as much certainty and dispatch as if his claim had been against a private party.

Among other things, the King is said to be *parens patriæ* ; and as such is supposed to have the care of minors, idiots, and lunatics, and the superintendence of all charities which have no other visitors assigned to them. But these duties are exercised either by the lord high chancellor for the time being, or by the ordinary courts of law. The Crown has a sort of ultimate reversionary interest as feudal lord paramount in the lands of the kingdom, which are all directly or mediately held of the King, and are by a fiction of law supposed to have been originally granted by him on certain conditions ; of which one is, the true and faithful allegiance of the holder. Hence, when a subject is convicted of treason, his lands are forfeited to the King ; and, for the same reason, when lands or other property have no owner, as when a man dies intestate and without heirs, the King takes them ; but his title must in most instances be verified by an inquest or jury, before seizure.

The granting of pardons is another royal prerogative. In some extraordinary cases, however, the King cannot oppose the course, or remit the execution of the law. 1st. The committing any man to prison out of the realm is, by a statute passed in the reign of Charles II.,

\* It was not till long after the Conquest that the kings of England ceased, occasionally at least, to attend and take part in the proceedings of their courts of law. In the time of Henry II. the king used to assist in the administration of justice both in the *curia regis* and in the exchequer. Henry III. is mentioned as having repeatedly sat in Westminster Hall with his judges ; and, on one occasion, when a verdict had been given against him, and the opposite party demanded judgment, he withdrew his suit in open court. We are told that Edward IV. sat in the king's bench for three days together, but it is not said that he interfered with the proceedings of the court. It is reported of James I. that he also sat there in person, but that he was told by his judges he could not deliver an opinion. *Allen's Rise of the Prerogative*, p. 97.

an unpardonable offence; 2nd. The King cannot pardon a person guilty of a common nuisance while it remains unredressed, though afterwards he may remit the fine; neither, 3rd, can the King pardon an offence against a popular or penal statute after information brought by an informer or person entitled to the whole or part of the penalty, the informer being considered to have acquired a private property in his part of the penalty, which the King cannot remit. And a special provision to that effect in the Act of Settlement declares that no royal pardon shall obstruct any impeachment by the Commons in parliament; though after the impeachment has been heard and determined, it does not appear that the royal grace is further restrained.

Besides being the fountain of justice, the king is also the fountain of honour, office, and privilege. Titles of nobility, baronetage, and knighthood, are conferred by his immediate grant, either as in the creation of peers, already mentioned, by writs or letters patent, or by corporeal investiture, or ceremony unaccompanied by any instrument, as in the creation of a knight. The King erects and disposes of offices; but as he can annex no fees to any new office without consent of parliament, this prerogative is of little moment. He may also confer various privileges on private persons; such as giving place or precedence to certain individuals, or granting letters of denization to persons born out of his dominions, by which they obtain certain privileges of natural-born subjects.

The King is the chief and supreme governor of the national church. This dignity was conferred upon him at the time of the Reformation by the 26 Henry VIII., c. 1, which enacts that the King is the only head on earth of the Church of England, and has all authority thereto annexed for the reformation and correction of all errors, heresies, and abuses, which could be amended by any spiritual jurisdiction whatsoever. In virtue of this power the King convenes, prorogues, regulates, and dissolves ecclesiastical synods and convocations. He may, also, erect spiritual colleges or chapters, may suppress or erect bishoprics, sanction appropriations, adjudicate upon spiritual causes on appeal, and do other similar acts to which the concurrence of the Pope was long considered essential.

The King's right of nomination to vacant bishoprics and certain other ecclesiastical preferments, arises rather from original or presumed foundership, than from his spiritual supremacy.

The King has authority at common law to regulate internal commerce. His prerogative in this respect may be classed under the following heads:—

1. The establishment of markets and fairs, with the tolls thereto belonging, which can only be set up by the King's grant, or be exercised by long and immemorial custom, which presupposes a grant.

2. The King has, at common law, the exclusive right of coining money and issuing coins, of calling in the current coin of the kingdom, fixing the values at which foreign coins shall circulate therein, &c. But the standard weight and purity of our coins having been fixed by statute, cannot be varied by proclamation of the King. The regulation of weights and measures was included by Blackstone, (i., 274,) among the royal prerogatives. It must now, however, be excepted

from them, everything relating to weights and measures being at present determined by the Acts 5 Geo. IV. c. 74, 6 Geo. IV. c. 12, and 5 and 6 Will. IV. c. 63.

*King's Councils.*—The King is assisted in the discharge of these various duties by several councils, independently of the parliament or great council of the realm.

*Peers.*—The first of these consists of the peers of the realm, who are by birth hereditary councillors of the Crown, and may be called together by the King to impart their advice in all matters of national importance. This council, however, as distinct from the peers in parliament, has long since fallen into disuse. Every peer of the realm may demand an audience of the sovereign to offer his advice, or tender his opinion, on matters of importance; but such advice is rarely offered.

*Privy Council.*—Another council belonging to the King is the Privy Council, usually styled, by way of distinction, “the Council.” This council consists of such persons only as the King may appoint, with the exception of the mayor of London, who is *ex-officio* a privy councillor, and, as such, is summoned to the first council on the accession of a new King. Privy councillors consist generally of the principal nobility and leading political commoners of the kingdom. As the members are chosen by the King, so he may at pleasure discharge all or any of them, and select new ones. The Privy Council is dissolved by the demise of the Crown; though, like parliament, its existence is now prolonged for six months thereafter, unless previously dissolved. No particular qualifications are necessary for privy councillors; all that seems to be required is, that they shall be natural-born subjects and ready to take the oaths, from the tenor of which their duties may be best gathered. These are, 1st, to advise the King according to the best of their ability and discretion; 2nd, to advise for the king’s honour and the public good, without partiality, through affection, love, need, doubt, or dread; 3rd, to keep the King’s counsel secret; 4th, to avoid corruption, and to help and strengthen the execution of what shall in council be resolved; 5th, to withstand all persons who may attempt the contrary; and, lastly, in general to do and keep all that a good and true councillor ought to do and keep to his sovereign lord. The judicial duties of this council will be noticed hereafter among the courts of justice.

*Cabinet Council.*—This body, though without any recognised legal existence, constitutes, in effect, the government of the country. It consists of a certain number of privy councillors, comprising the principal ministers of the Crown for the time being, who are summoned to attend at each meeting. The name is said to be derived from the cabinet of Queen Henrietta, in which the advisers of Charles I. were accustomed to meet. The number is usually from 10 to 12. The First Lord of the Treasury, the Chancellor, the Chancellor of the Exchequer, the President of the Council, the three Secretaries of State, (Home, Foreign, and Colonial,) are always, in practice, members of the Cabinet. Some other offices are usually, but not invariably, accompanied by a seat in it.

The influence which the sovereign exercises over the deliberations of

the Cabinet, and the degree of executive power that centres in him personally, necessarily differ very greatly at different periods, inasmuch as they materially depend on his character and capacity, and on the state and character of parties. At different periods since the Revolution, Parliament has compelled the Crown to dismiss one set of ministers and to choose another, in opposition to its own predilections; but such ministries have rarely enjoyed much real power or been very lasting. Whichever party in the state was known to have the countenance and to enjoy the confidence of the Crown, has generally contrived, in no very long period, to secure a majority in parliament. Hence it is that from the Revolution down to the accession of George III., the Whigs, with the exception of a few short intervals, were constantly in power; and that the Tories held, with similar exceptions, the reins of government from the accession of George III. down to the introduction of the Reform Bill. But it is doubtful whether such will be the case in future. It was comparatively easy for the Crown to deal with the proprietors or patrons of nomination boroughs; but the support of such persons is no longer sufficient to secure a majority: the favourable opinion of the constituent body in general must now be also conciliated; and no ministry whose proceedings should be disapproved of by the bulk of the middle classes, could hope to obtain a majority in the event of a dissolution, however high they might stand in court favour. Whether the nation shall be better or worse governed in time to come than it has been since the Revolution, experience only can decide; but there can be no doubt, speaking generally, that the government must henceforth be conducted more in accordance with the opinion of the public. Still, however, the influence of the Crown is very considerable; and when parties are nearly balanced in the country and in the House of Commons, it may be able to turn the scale in favour of whichever party it espouses. But it is no longer in the power of the Crown to make any effectual resistance to a decided majority in parliament, otherwise than by enlisting the public sympathies in its favour. If it cannot do this, there is nothing for it but to submit to be dictated to by the leaders of the dominant party for the time being. And this, in fact, is the decisive criterion of a free government—that the highest authority in the state should be obliged to act in accordance with the public voice as expressed by its representatives.

Not only are the legislative measures proposed by the Crown, and the conduct of the internal government of the country and its foreign relations with other states entrusted to ministers, but they have also, as already stated, the disposal of all or by far the greater part of the patronage belonging to the Crown. Offices involving no political responsibility, such as those of the household, have been sometimes excepted from this rule, and left to be filled up by the sovereign according to his personal predilections; but this is not by any means a uniform practice, and ministers have repeatedly required and obtained the disposal of these offices.

Generally speaking, patronage in a country like England is always exercised with a view to the acquiring or preserving parliamentary support. Absolute monarchs, such as Napoleon, the Kings of Prussia, and the Emperors of Austria and Russia, may select individuals to

fill offices on the sole ground of their superior fitness to discharge their duties. But in a free country suitability for office is not the only thing to be attended to in deciding upon the comparative claims of candidates for official preferment. If they possess it, so much the better; but the primary consideration is, how is the government to be carried on? Now this, it is plain, will be best effected by securing the active support of the friends of government, and by weakening the party of their opponents; and the distribution of patronage is the principal means by which these objects are to be realized. A government that should neglect to avail itself of this power could not long exist. Hence in England nine out of every ten situations are disposed of on the recommendation of persons possessed of parliamentary influence. This, in fact, is the *via regia* to preferment and state distinction. In filling up the more conspicuous situations, the talents and acquirements of the candidates, as well as their recommendations, must necessarily be taken into account; but in the great majority of cases parliamentary patronage is the *sine quâ non*. Were the government more popular than it is, this result would be still more apparent. A man of ability in Prussia, without connections, has a better chance of getting on, if he devote himself to the public service than in England; but, at the same time, the chances of such a person being advanced are infinitely greater here than in the United States. In the latter, everything is sacrificed to party considerations; and the most splendid talents and capacity to render great public services would never advance their possessor one step on the ladder of promotion if he happened to be of a different party from that in power at the time, or to want party support. The reason is, that in England parliamentary influence predominates merely, whereas in America it is everything; and everything must, in consequence, be made subservient to its support.

*Officers of State and King's Ministers.*—In England, as in other countries, the sovereigns early found the advantage of surrounding themselves with councillors, or rather with servants, more submissive and more useful for their purposes than those great state functionaries who originally possessed the chief weight and influence in their several departments. Hence, of the ancient great offices of State, one only, the Lord High Chancellorship, can be regarded as now subsisting in the full extent of its pristine power and importance. Some have become altogether obsolete; others are kept in commission, and their duties divided among several persons; others confer little more than titular dignity.

The great officers of state are,—

1. The Lord High Steward. This officer is now only nominated when a coronation or an impeachment takes place, in which case he acts as President of the House of Lords.

2. The Lord High Chancellor, who will be subsequently noticed.

3. The Lord High Treasurer. For a lengthened period this office has not been filled. It is placed in commission, in the hands of officers styled Lords of the Treasury. The First Lord of the Treasury is usually Prime Minister for the time being. The Treasury has the control of all matters connected with the receipt and expenditure of the

public revenue, the appointment and superintendence of the Boards and Officers of Customs and Excise, Stamps and Taxes, Post Office, &c.

4. The Lord President of the Council (Privy Council), an office of great antiquity, revived in the reign of Charles II., and since continued. Its duties are little more than nominal; but it is attended, by custom, with a seat in the Cabinet.

5. The Lord Privy Seal. This officer has the custody of the King's Privy Seal, for the purpose of affixing it to charters, &c., as the Lord Chancellor has of the Great Seal. He also usually sits in the Cabinet.

6. The Lord Great Chamberlain. This office is hereditary, and has passed in succession to several great families. It is at present vested in females, by whom the deputy chamberlain is appointed. It is now merely a titular office, and not to be confounded with that of the Lord Chamberlain of the Household.

7. The Lord High Constable was also a hereditary officer, and had extensive military authority. None has been appointed, except on special occasions, such as coronations, &c., since the attainder and execution of Stafford, Duke of Buckingham, in 1521.

8. The Earl Marshal. This dignity is hereditary in the family of Howard, Duke of Norfolk. The Earl Marshal has various ceremonial duties, and a jurisdiction extending to a certain distance round the King's Palace at Westminster, which is executed by deputy.\*

9. The Commander-in-Chief has the control and disposal of all matters relating to the army; he regulates the marching and cantonment of troops; appoints and dismisses officers; authorizes courts martial, and confirms or annuls their decisions, &c.

10. The Lord High Admiral. This office has generally, though not uniformly, been in commission since the Revolution. The Commissioners are styled Lords of the Admiralty, the First Lord being usually a member of the Cabinet. The Board of Admiralty has the control and direction of all matters relating to the navy, the naval dock-yards, &c.

11. The office of Secretary of State appears to have originated, or rather to have first assumed a character of importance, in the reign of Queen Elizabeth. At that time, however, the Secretary of State was not elevated to the rank of a member of the Privy Council, but attended its deliberations in an inferior capacity. The number of Secretaries of State has varied at different times; but the office has continued to increase in importance, and its holders may at present be said to discharge most of the higher functions of the executive government. It is divided into four branches,—the offices of the Secretary of State for the Home Department, Foreign Department, Colonies, and the Secretary to the Lord Lieutenant of Ireland. Each office has two Under-Secretaries; one permanent, for the discharge of the regular business of the office, the other a political functionary, depending on the changes in the Cabinet. The Home Office exercises a general superintendence over the police and magistracy of the country, and over the execution of justice. The duties of the Foreign Office embrace all negotiations and other matters connected with our intercourse with foreign powers, including the nomination and recall of ambassadors, consuls, &c. The Colonial Secretary has the management of all

\* Abolished by 12 and 13 Vict. c. 101.

affairs connected with the colonies. The Secretary of State for Ireland is the representative, in parliament, of the Irish Government, and is usually, in effect, the officer principally charged with its conduct. All four are members of the Cabinet. The government of Scotland is, in effect, vested in the Lord Advocate, or principal law officer for that part of the kingdom.

12. The Secretary at War has a distinct department, being the ordinary channel of communication between the Government and the Commander-in-Chief and other military authorities.

13. The affairs of our East Indian possessions, so far as these are subject to the control of the King's Government, are transacted, according to the provisions of Mr. Pitt's Act of 1784, by a Board of Commissioners, commonly termed the Board of Control.

14. The Board of Trade and Plantations consists of a Committee of the Privy Council, having cognizance of all matters relating to the commerce and navigation of the country.

15. The Post Office is under the control of an officer styled the Postmaster-General.

#### SECT. II.—*Officers employed under the Crown in the Administration of Justice.*

*The Lord High Chancellor.* His office is very ancient, and is said to be derived from the Roman empire. Originally he had the supervision of all charters, letters patent, &c.; and hence he was intrusted with the care of the King's great seal, the mere delivery of which into his hands constitutes him Chancellor, no further ceremony being necessary; his dismissal or resignation is, in like manner, effected by its redelivery. In point of precedence he is superior to all temporal lords except princes of the blood royal, as he also is to the spiritual lords with the exception of the Archbishop of Canterbury, to whom he ranks next. He is privy councillor by virtue of his office; and, according to some, Speaker of the House of Lords by prescription. He appoints, in the King's name, all justices of the peace throughout the kingdom. Being generally, in former times, an ecclesiastic (few laymen being then capable of holding an office so conversant with writings), and officiating at the royal chapel, he became keeper of the King's conscience; visiter, in right of the King, of all hospitals and colleges of the King's foundation; and patron of all the King's livings under the value of 20 marks in a valuation made in the reign of Henry VIII., called the King's Book. In virtue of a delegated authority from the Crown, he has the guardianship of all infants, idiots, and lunatics, and the general superintendence of charities. His functions as chief judge in equity will be noticed hereafter.

The officers next in dignity employed in the administration of justice, are the judges; but, as they differ in the different courts, we shall defer noticing them until we notice the courts over which they respectively preside. With the judges, the higher order of officers may be said to terminate. All of them, in a certain sense, represent the King himself: they act in his name, and possess a general jurisdiction throughout the kingdom. Those whom we are now about to mention are of a subordinate and local character.

England, it is to be observed, is, for civil purposes, divided into counties or shires, hundreds, and tithings, townships, or villas, the last three of which, in a legal sense, are synonymous. In some counties there are intermediate divisions between the shire and the hundreds, as the lathes in Kent, and the rapes in Sussex, each of which contains several hundreds; some of the larger counties were, moreover, originally divided into trithings; but the only county in which this triple division still continues to exist, is Yorkshire, where they are known by the name of ridings. Each of these divisions originally had, and, to a certain extent, still retains, its proper officers. With respect to cities and boroughs, some have been created by the Crown into counties, and as such are entirely detached from the county in which they are locally situated; others which remain within the body of the county, are exempted from the interference of the King's officers, and are governed by local authorities, created by charter, or sanctioned by prescriptive usage. Three of the counties—Chester, Durham, and Lancaster—are called counties palatine; the two former had a very early origin, and are therefore palatinates by prescription, or immemorial custom; the latter was created by Edward III. in favour of Henry Plantagenet. Their owners had formerly *jura regalia* in these counties, as fully as the King himself, whose great feudatories they continued to be. They formed, in fact, small kingdoms within themselves; and the lord possessed powers over them similar to those of the King over the rest of the kingdom, as well in civil as in criminal cases. The powers of the owners of these franchises were, however, long ago much abridged (27 Hen. VIII.); but, until the late Act for remodelling the see of Durham, the county palatine of Durham remained in the hands of a subject.

*County Officers.*—The principal county officers are the sheriff, the *custos rotulorum*, the justices of the peace, the clerk of the peace, and the coroner.

1. Sheriff is, in Saxon, *scire-gerefa*, that is, the reeve or *prepositus* of the shire. His office was partially identified with that of the *comes*, or earl, whose substitute he was, and to whose ministerial duties he succeeded under the name of viscount (*vice-comes*). His district is co-extensive with that of the *comitatus*, or county, which, at the Conquest, also obtained the name of his bailiwick (*balliva*).

The sheriff is chosen annually: at common law he was chosen by the freeholders; but by statutes 9 Edward II., st. 2, 14 Edward III., st. 1, c. 7, 23 Henry VI., c. 9, and 21 Henry VIII., c. 20, he is to be appointed yearly on the morrow of All Souls (since altered to the morrow of Saint Martin), at the Exchequer, by the Chancellor, Treasurer, President of the King's Council, Chief Justice, and Chief Baron. And the custom now is for the judges, together with the above-mentioned officers, to meet in the Exchequer on the morrow of the last-mentioned day, when the judges propose three persons to be reported, if approved of, to the King; who afterwards appoints one of them (usually the first on the list) sheriff. No definite qualification seems to be required for the office except that, holding an accountable situation, and being responsible both to the Crown and to those private persons whom he may have injured by the negligent or improper performance of his functions, he is

required by several statutes to have sufficient land within the shire to answer the King and his people. In practice he is usually a person of consideration and substance in his county. If any reasonable excuse can be alleged for declining this onerous office,—as that the individual chosen is of small fortune, an officer in the militia, abroad, or the like,—it will be received. The stat. 1 Rich. II., c. 11, enacts, that no man who has served in the office shall be again elected within three years. A sheriff may, however, hold his office after the year, if not before lawfully discharged; and by 1 Anne, c. 8, all officers appointed by the preceding King may hold their offices for six months after the King's demise, unless sooner displaced by his successor. If a sheriff die before his office has expired, the under-sheriff executes the same in the deceased sheriff's name till a new one is sworn; and is answerable for the execution of the office as the deceased sheriff would have been. If any one, fully qualified and chosen, refuse the office of sheriff, he is liable to a criminal information. The Earl of Thanet is hereditary sheriff of Westmoreland; and the livery of London elect the sheriffs for London and Middlesex.

The duties which the sheriff has to perform are numerous: he has to act as a judge; as the keeper of the King's peace; as a ministerial officer of the superior courts of justice; and as the King's bailiff.

In a judicial capacity, or rather in a capacity partly judicial and partly ministerial, he presides at the county and hundred courts, and also upon the execution of writs of inquiry, and of writs of trial issued under 3 and 4 Will. IV., c. 42. He presides at the election of knights of the shire (subject to control by the House of Commons) and of coroners, returning such as are duly elected. The provisions for registration under the Reform Bill have reduced this duty within very narrow limits.

The sheriff, as well as the constable, coroner, and certain other officers of the King, are, by the great charters, expressly forbidden to hold any pleas of the Crown, or, in other words, to try any criminal offence upon an indictment. Neither can the sheriff, during the continuance of his office, act as an ordinary justice of the peace. He formerly held his tourn or leet regularly once or twice in the year for matters within its jurisdiction.

As keeper of the King's peace, he may apprehend and commit to prison all persons who break, or attempt to break it; and may bind any one in a recognizance to keep it: but such precautionary measures are now usually taken by the justices of the peace. He is bound, *ex officio*, upon proper requisition, to pursue and take all traitors, murderers, felons, and other misdoers, and to commit them to gaol for safe custody. He is also bound to defend his county against the King's enemies, should they come into it; and for this purpose, as well as for keeping the peace and pursuing felons, he may command the adult male population of his county to attend him in arms. The force so raised is called the *posse comitatus*, or power of the county. But it is hardly necessary to say, that the Crown no longer relies on the sheriffs for the defence of the realm, and that the *posse comitatus* is not organised so as to be an efficient force even in the case of internal disturbance.

In his ministerial capacity, the sheriff is bound to execute all writs and other process issuing from the King's courts of justice, and directed to him; and, if necessary, to arrest and take charge of the defendant. When a cause comes to trial, he must summon and return the jury; and when it is over, he causes the judgment of the court to be carried into execution. In criminal matters he returns the juries, attends the judges during trial, and executes by deputy or personally the sentence of the court, even though it be death. The bailiff, gaoler, and executioner, are looked upon as his officers, and, to a certain extent, he is answerable for them.

As the King's bailiff, it is his business to preserve the rights of the King within his bailiwick; for so his county is usually called in writs. Further, it is his duty to watch over the King's rights; to seize to the King's use lands devolved to the Crown by attainder or escheat; to levy fines and forfeitures; to seize and keep waifs, wrecks, estrays, and the like, unless granted to some subject; and to be accountable for these and other sources of revenue to the King's officers of the Exchequer.

The *Custos Rotulorum* is also a county officer of high dignity, and bears the same rank in civil affairs that the *Lord-lieutenant* does in military. Of late years the two offices have been usually vested in the same individual; but they are totally distinct, both in their appointments and their duties. The *custos rotulorum* has, as his name implies, the custody of the rolls and records of the sessions of the peace, though, in point of law, they remain in the custody of all the justices. The appointment is made by the King's commission; unless the King, or his progenitors, have, by letters patent, granted any liberty in particular districts to appoint the *custos rotulorum*, in which case the lord of the liberty exercises the power. The *custos rotulorum*, having, by virtue of his office, the custody of the rolls of session, should attend the session either personally or by his deputy, who is the clerk of the peace, and is appointed by him. The *Lord-lieutenants* of counties became standing officers of the Crown about the reign of Henry VIII.; they represent the Crown in the management of the militia of each county.

*Clerk of the Peace.*—This officer, appointed as above mentioned, is responsible to the justices in session for the performance of his duties. It is his duty, by himself or his deputy (who must be approved by the *custos rotulorum*), to be in constant attendance on the Court of Quarter Session. He gives notice of the time of its being holden or adjourned, issues its process, records its proceedings, and executes all the ministerial acts necessary to give effect to its decisions. He receives bills of indictment from the grand jury; calls over the petty jury; arraigns prisoners; receives and records verdicts; administers oaths; and makes true entries of all proceedings. The table of fees to be taken by the clerk of the peace is settled by the justices in their Court of Quarter Session, and subsequently submitted to the justices of assize for their approval.

*The Coroner (coronator*, so called from having principally to do with pleas of the Crown, or those wherein the King is more immediately concerned) is a very ancient common law officer. The Lord

Chief Justice of the King's Bench is, *ex officio*, the principal coroner in the kingdom, and may, if he please, exercise the jurisdiction of a coroner in any part of the realm. But there are also particular coroners for every county, usually four, but sometimes six, and sometimes fewer. This officer is of equal antiquity with the sheriff, and was ordained, together with him, to keep the peace, and to inquire concerning the rights of the Crown.

The Coroner is chosen by the freeholders in the County Court, as was formerly the case with sheriffs, conservators of the peace, and other officers. A writ at common law issued to the sheriff, commands him "to cause to be chosen such a person who may best know and be able to attend to that office." The coroner is chosen for life, but may be removed either in consequence of being made sheriff, or by the King's writ *de coronatore exonerando* for cause therein assigned—as, that he is engaged in other business; incapacitated by years or sickness; hath not a sufficient estate in the county, or lives in an inconvenient part thereof: and by st. 25 Geo. II., c. 29, extortion, neglect, or misbehaviour, are also made causes of removal.

The office of coroner is, also, like that of sheriff, both judicial and ministerial. This is, in a great measure, ascertained by statute 4 Edward I., *de officio coronatoris*, and consists, first, in inquiring when any person is slain, or dies suddenly, or in prison, concerning the manner of his death, which he must do on inspection of the body; for, if the body be not found, the coroner cannot sit. He must also sit at or near the place where the death happened, and make his inquiry by a jury of at least 12 persons from the neighbouring towns. If any be found guilty by this inquest of murder or other homicide, he is to commit them to prison for further trial, and is also to inquire concerning their lands, goods, and chattels, which are forfeited; he must inquire whether any deodand has accrued to the King, or the lord of the franchise, and must certify the result of the inquisition (under his own seal and the seals of the jurors), together with the evidence thereon, to the Court of King's Bench, or to the next assizes. Another branch of his office is to inquire concerning shipwrecks, and certify whether there be wreck or not, and who is in possession of the goods. Concerning treasure-trove, he is also to inquire who were the finders, and where it is, and whether any one is suspected of having found and concealed a treasure; and, if so, to attach him, and hold him to bail upon the suspicion.

The coroner acts ministerially as the sheriff's substitute; for, when just exception can be taken to the sheriff for suspicion of partiality (as that he is interested in the suit, or of kin to either plaintiff or defendant), the process for execution of the King's writs must be awarded to the coroner instead of the sheriff.

*Justices of the Peace.*—The next species of subordinate magistrates are the justices of the peace, the principal of whom is the *custos rotulorum*, already mentioned. The Lord Chancellor or Keeper, the Lord Treasurer, the Lord High Steward of England, the Earl Marshal, the Lord High Constable of England (when any such officers are in being), and all the justices of the Court of King's Bench (by virtue of

their offices), and the Master of the Rolls (by prescription), are general conservators of the peace throughout the kingdom, and may commit all breakers of it, or bind them in recognisances to keep it; the other judges are only so in their own courts. The sheriff and coroner are conservators of the peace within their own county, and either of them may take a recognisance or security to keep it. Constables, tithing-men, and the like, are also conservators of the peace within their respective jurisdictions, and may apprehend actual breakers of the peace, and either detain them to prevent a further breach, or bring them before a justice to inquire, commit, or take bail to answer for the past offence.

The ancient conservators of the peace were appointed in various ways, and were often chosen by the general body of freeholders of the county; but their duties were ministerial, and rather resembled those of modern constables than of justices of the peace, whose office originated in the reign of Edward III. The latter are appointed by the King's commission under the great seal, the form of which was settled by the judges in 1590. This appoints them jointly and severally to keep the peace, and any two or more of them to inquire of and determine felonies and other misdemeanors; in which number some particular justices are directed to be always included, and no business is to be done without their presence, the words of the commission (when in Latin) running thus, "*quorum aliquem vestrum A, B, C, D, &c., unum esse volumus*," whence the persons so named are usually called justices of the *quorum*. Formerly it was customary to appoint only a select number to be of the *quorum*; but now the practice is to repeat the names of all over again in the *quorum* clause, excepting, perhaps, some one person for the sake of form; and no exception is now allowable for not expressing in the form of warrants, &c., that the justice who issued them is of the *quorum*. When any justice intends to act under this commission he sues out a writ of *dedimus potestatem* from the clerk of the Crown in Chancery, empowering certain persons therein named to administer the usual oaths to him, after which he is at liberty to act. The only qualification seems to be that required by statute 5 Geo. II., c. 11, which makes it necessary that every justice shall have lands to the value of 100*l.* per annum clear of all deductions; if he act without such qualification, he forfeits 100*l.*

The office of these justices is determinable—1st. By the demise of the Crown; that is, in six months after. But, if the same justice be put in commission under the new monarch, he shall not be obliged to sue out a new *dedimus*, or to swear to his qualification afresh; nor, by reason of any new commission, to take the oaths more than once in the same reign. 2nd. By express writ, under the great seal, discharging any particular person from being any longer justice. 3rd. By a writ of *supersedeas*, which suspends the power of all the justices, but does not totally destroy it, as it may be revived again by another writ, called a *procedendo*. 4th. By a new commission, which virtually, though silently, discharges all the former justices that are not included therein; for two commissions cannot subsist at once. And, 5th. By accession of the office of sheriff, which suspends that of justice.

The power, office, and duty of a justice of the peace depends on his commission, and on the several statutes which have given justices jurisdiction in particular matters. His commission empowers him singly to preserve the peace; and, thereby gives him all the power of the ancient conservators in suppressing riots and affrays, in taking securities for the peace, and in apprehending and committing felons and other inferior criminals to prison to take their trial. It also empowers any two or more to hear and determine all felonies and other offences, which is the ground of their jurisdiction at sessions; but this will be noticed more fully afterwards.

*Constables* are of two sorts, high or hundred constables, and petty constables. The former originated in the Statute of Winchester, and are appointed at the court leets of the franchise or hundred over which they preside, or, in default of that, by the justices at their quarter sessions (which is now the usual way); and are removable by the same authority that appoints them. The petty constables are inferior officers of immemorial antiquity in every township, subordinate to the high constable of the hundred. Their office is not distinguishable at this day from that of headborough, borseholder, or tithing man. They are likewise chosen by the jury at the court leet, or, if no court leet be held, appointed by two justices of the peace.

The general duty of all constables, both high and petty, is to keep the King's peace in their several districts; and for that purpose they are armed with considerable powers of arresting and imprisoning, of breaking open houses, and of maintaining the peace by forcible means. Other duties have been from time to time superadded by statute.

---

#### CHAPTER IV.—COURTS OF JUSTICE, CIVIL AND CRIMINAL, &c.

##### SECT. I.—*Courts of Justice.*

HAVING thus briefly specified the officers employed in the administration of justice, we come next to the courts. In England, justice is always administered publicly; and a court of justice, by the common law of the land, is an open court, with no other restriction than what order, decency, and the due administration of justice, may require. No court of justice can be created but by the King's commission, and there are some, as courts of equity, which cannot now be created by the mere authority of the Crown. In the old courts, which have existed from time immemorial, this origin is presumed, though no record of it now remains, and though there may be reasonable historical evidence that it never in fact existed. The creation of a new superior court by the sole prerogative of the King would, however, be attended with considerable difficulty at the present time; but the erection of inferior courts of known jurisdiction according to the course of the common law, such as a leet or a civil court within a borough, could, it is apprehended, be even now effected without difficulty where no subsisting statute precludes it, and no public or private rights are injured. As it is by the King, as head of the executive, that courts

are established, so it is from him that they are considered as deriving their authority. The judges are his representatives, and an offence offered to them is a contempt of his authority.

Some courts have only a criminal, some only a civil, jurisdiction, others both. Some are superior courts, others inferior; the superior courts are the courts of general jurisdiction, such as those at Westminster; the courts of assize, oyer and terminer, and similar sessions; the courts of counties palatine; the ecclesiastical courts at Doctors' Commons, and some other courts, of which the jurisdiction is limited as to matter or locality. The inferior courts are, amongst others, county courts, courts of conscience, courts baron, and borough courts. Some, again, are courts of record; others not. A court of record is one in which the record of the proceedings (which is kept in all courts) is of such high authority, that no evidence will be admitted in contradiction to it as between the parties to that record; and the record itself is enrolled in parchment, and deposited in public archives for perpetual memorial. The courts of equity never enrol their proceedings, and are therefore not held to be courts of record.

Every court is provided with an apparatus for the discovery of controverted facts, for the application of the law to those facts, and for enforcing the judgment pronounced thereon. It has, in addition, officers to record its proceedings; to issue its process; and to carry it into execution; and it admits the intervention of certain recognised agents to carry on the proceedings between litigant parties, who though they may not be strictly its officers, are, to a certain extent, under the control of its judges, to whom they are amenable in a summary way for misconduct and malpractices. To this class of persons, whose business it is to advance the ends of justice by securing to each party before the court a full hearing and a satisfactory discussion of their relative claims and merits, belong counsel, solicitors, attorneys, and proctors. It is the duty of the three latter classes to receive their client's instructions, collect the necessary evidence, and conduct the case through the formal part of the proceedings. They then lay it before counsel, who apply the law to the facts, and, on the hearing, attend at the bar of the court, examine witnesses, and urge such arguments either of law or fact as the case may admit in support of their clients.

*Attorneys.*—All attorneys of the superior courts, before being admitted to practice, must serve a clerkship of a certain length, and undergo an examination by a board of examiners appointed for the purpose: upon their admission, which is made by a formal entry on the rolls or books of the court, they become, in all matters relating to their professional duties subject to its authority and control. In cases of extreme misconduct, the court in which they are admitted will strike them off the rolls; after which they cannot legally practise in it. When admitted to practise in the Court of Chancery, they are termed solicitors. The corresponding officers of the ecclesiastical and admiralty courts are called proctors.

*Barristers* are not, strictly speaking, officers of the courts. It is perhaps in the discretion of the judges to permit whom they please to practise in their respective courts; but long established custom sanctions the admission of none but such as are members of one of the Inns

of Court.\* It is in these that the ceremony of calling to the bar takes place, after which the admission to practise in court is a matter of course. The only qualification required for being called, is, that the candidate should have kept a certain number of terms. Hitherto five years have in all cases been necessary, unless the candidate were of the degree of M. A. of one of the universities, in which case three were sufficient; by a late regulation, however, in some of the inns, any member may be called at the end of three years, if then of the age of twenty-five. No examination is now required, except in one. The terms are kept by the student's dining a certain number of times in the hall of the inn to which he belongs. If a barrister misconduct himself in the course of his profession, he may, it would seem, be silenced by the judge of the court in which he appears, and is subject to certain pains and penalties now disused. He may also, for good reason, be disbarred by the society of which he is a member.

Barristers, hitherto, have been divided into two degrees; utter barristers (now called, simply, barristers) and serjeants-at-law. Serjeants are sworn to do their duty to their clients; a duty which is equally incumbent on a barrister under the degree of serjeant, though not expressly required of him on admission. It is the practice to admit the judges to this order on their elevation to the bench. From the most eminent of these some are usually selected to be the King's counsel and King's serjeants, the two principal of whom are called his Attorney and Solicitor-General; the King's counsel have precedence, and a place within the bar, as it is termed, immediately in front of the bench; but this advantage may be given by royal patent without the party being one of the King's counsel. The Queen consort has also her Attorney and Solicitor-General, who sit with the King's counsel.

The number of practising barristers at present resident in London may perhaps be estimated at upwards of 1,000; attorneys are far more numerous, and, including country practitioners, amount to many thousands.

Barristers do not now, as formerly, practise indiscriminately in all the courts; the common law courts have one bar; the courts of equity another, which seldom interfere with each other. Others are not in the habit of appearing in any court, but are employed in drawing settlements, conveyances, and other instruments. These are termed *Conveyancers*. For this purpose, however, though usual, it is not essential, to be called to the bar.

The judicial functions differ in the different courts; in some, the same person is at once judge of law and fact; in others, the cognisance of law and fact is divided between a judge and a jury; the judge deciding matters of law, the jury matters of fact. The courts of equity, the ecclesiastical and the admiralty courts, which are framed upon the model of the Roman civil law, are of the first description; the common law courts of the latter. For this reason we shall defer speaking of

\* The Inns of Court, of which there are four, viz. the two Temples, Lincoln's Inn, and Gray's Inn, are not chartered or incorporated, but private societies, in existence as early as the 13th century, for the education of lawyers, and over which the judges have a control as visitors. Originally, attorneys, as well as barristers, seem to have belonged to them; they are now confined to the latter.

the judges, until we come to speak of the courts in which they respectively preside.

*Courts of Law.*—Blackstone divides the courts of justice in England into such as are of a public and general jurisdiction throughout the whole kingdom, and such as are only of a limited jurisdiction in certain parts of it. Of the former, there are, 1st, the courts of common law; 2dly, the Privy Council; 3dly, the courts of equity; 4thly, the Court of Bankruptcy; 5thly, the Court for the Relief of Insolvent Debtors; 6thly, the ecclesiastical courts; and, 7thly, the courts maritime.

1. The principal permanent Courts of Common Law are, the House of Peers, the Court of Chancery in one of its departments, the Exchequer Chamber, the Court of King's Bench, the Court of Common Pleas, and the Court of Exchequer.

The House of Peers possesses at once a civil and a criminal jurisdiction; as a court of the former description, however, it is a court of appeal or error only. In criminal cases it has, moreover, jurisdiction to try high offences and misdemeanors upon impeachment by the Commons, and also treasons or felonies committed by persons having privilege of peers. The Court of King's Bench is a court both of civil and criminal jurisdiction; as a criminal court, however, it has no original jurisdiction, except over offences committed in the county in which it sits for the time being, and misdemeanors brought before the court by criminal information. The courts of Common Pleas and Exchequer have a civil jurisdiction only.

2. The jurisdiction of the Privy Council, as remodelled by a late statute, is chiefly appellate, and mostly confined to colonial and ecclesiastical cases. It is founded on the ancient jurisdiction of the King in council.

3. The Courts of Equity: the chief of these is the Court of the Lord Chancellor, with the courts of the Master of the Rolls and Vice-chancellors; and, as a court of appeal, the House of Lords. 4. The Bankruptcy Court, with the subordinate courts of the Commissioners of Bankruptcy. 5. The Court for the Relief of Insolvent Debtors, entirely founded on statute. 6. The Ecclesiastical Courts, which, though local, prevail throughout the kingdom, each ecclesiastical division having its own; thus there are the provincial courts, the diocesan courts, the archdeaconry courts, with others that are inferior: and, as an ultimate court of appeal, the Privy Council. And 7 and last, the Admiralty Courts.

The principal courts of limited jurisdiction are the courts of the counties palatine of Chester, Lancaster, and Durham, and the courts of the two Universities of Oxford and Cambridge, together with many others scattered through various parts of the kingdom, too numerous to notice. Almost every corporate town, indeed, has some privileged court of its own; thus, London has its Mayor's and Sheriffs' Courts, and its Court of Requests for the recovery of small debts; Bristol, its Tolsey Court; and Liverpool, its Court of Passage. No general rule can be laid down in respect of these courts, each depending for its jurisdiction and constitution on the peculiar terms of the charter, statute, or custom by which it subsists: they form, indeed, rather

exceptions to the general system, than parts of it. In our subsequent remarks, therefore, we shall confine ourselves to the courts of the former class: to attempt a detailed account of the latter would necessarily carry us beyond the limits prescribed for the present article, and be useless and uninteresting to the general reader.

Even the courts of general jurisdiction at first sight perplex the reader, and present various anomalies. The courts of equity, for instance, at this day of the highest judicial authority in the kingdom, are not courts of record, while the most insignificant local court-leet claims to be so. So the owner of property whose title is denied in the Common Pleas, receives countenance and support from the Chancellor. Upon these peculiarities it may be observed, that the judicial system of the country did not spring at once from the mind of the legislator in all the fair proportion of design; it is the work of various times and hands, made rather to meet the necessities of the occasion than framed according to any regular plan. To use Blackstone's simile, it resembles an old house which has been pulled down and altered and added to, to suit the habits or convenience of successive proprietors. As civilisation advances, and the increasing or varying wants of a nation render it necessary, improvements and additions are made without aiming at symmetry, or attempting to give the heterogeneous mass the appearance of order and regularity. This has been the case with the courts in England: we have the leets and county courts of the Saxons, the exchequer of the Normans, the chancery of the Lower Empire, and the consistorial courts of the Canonists. Some have originated in necessity, others owe their existence to accidental circumstances; some seem to be united together in a general system, while others, from change of time and circumstances, have become altogether useless and obsolete. We shall here briefly point out the origin of each.

We have very scanty means of ascertaining the nature of the judicial system of the Saxons, though it seems to have possessed considerable merit, and was certainly in much favour with those subject to it. Under the Saxons, England was for the most part divided into shires, hundreds, and tithings, townships, or vills. These divisions had each its peculiar courts and officers; justice was administered between parties in the county and hundred courts, and in the courts of such lords as had a jurisdiction annexed to their lands. An appeal lay for denial of justice to the King and his council; but no man was permitted to seek justice from him till he had failed in obtaining it at home. We have no satisfactory information in regard to the composition of these courts, but we know that they possessed an ecclesiastical as well as a civil and criminal jurisdiction: the bishop and the earl or ealdorman sat together until the attendance of the former was forbidden by a law of the Conqueror.\*

The same tribunals for administering justice were continued for several reigns after the Conquest, though changes were made in the formation of the superior courts. The first improvement introduced, if not by the Conqueror, at least by the Norman princes, was the institution of a court in imitation of the Exchequer established in Normandy. A court called the *Curia*, or *Aula Regis* also appears very

\* See *Edinburgh Review*, No. lxix. p. 10. 1 *Reeve's English Law*, 7, 8.

early in the history of those princes, and its rolls are among the most ancient judicial records in the archives of the country. The precise period when this court became a court of judicature distinct from the Great Council cannot now be distinguished; but in the 12th century we find the practice established of issuing writs out of Chancery, at the suit of parties, for the purpose of enabling them to implead in that court without previous recourse to the subordinate tribunals. The jurisdiction of the *Curia Regis* embraced both civil and criminal proceedings, and was attendant on the person of the King. But the Great Charter, by fixing the common or civil pleas to a certain place, necessarily detached them from the criminal judicature, and led to the formation of a separate court, afterwards called the Court of Common Pleas. At length, in the reign of Edward I., we find the whole judicial establishment subdivided and remodelled, and the three courts of the King's Bench, Common Pleas, and Exchequer, distinguished respectively as courts of criminal, of civil, and of fiscal cognisance.\* At the present day these distinctions have been almost obliterated; and the three, in most civil cases, possess a concurrent jurisdiction. Until very lately, indeed, this was effected by a fiction: thus, every one bringing his action in the Court of Exchequer acknowledged himself a debtor to the King; and, in like manner, in the King's Bench, every one bringing a civil action was obliged to charge the person against whom he brought it with some offence against the Crown. But civil pleas between party and party in personal actions are now equally cognisable in all by uniform process, although each still retains its peculiar jurisdiction over certain pleas. Thus, the King's Bench alone maintains its pleas of the Crown; the Common Pleas its real actions (so far as they remain in force); and the Exchequer a certain exclusive authority on matters of revenue. This latter court had also an equitable jurisdiction; but this has been transferred within these few years to the Court of Chancery.

The courts of Assize and Nisi Prius, in their present form, owe their existence to the same monarch. Previously to his time, circuits were made by justices in eyre, or *itinere*, who, as already seen, were first established in the reign of Henry II. in 1176, by the Parliament of Northampton, with a delegated power from the King's Great Court, the *Aula Regis*, of which they were members. At first, these justices made their circuits round the kingdom once only in seven years; but afterwards they were required, by *Magna Charta*, to be sent into every county once a year. The present justices of assize, however, are more immediately derived from the statute of Westm. 2, 13 Edward I., c. 30, which directs certain persons to be assigned out of the King's sworn justices, who are to associate with them one or two discreet knights of each county.

These are the principal Common Law Courts. They are, for the most part, similarly constituted; and their proceedings all recognise and adopt the ancient common law of the land. The courts we have now to speak of are of an entirely different description, differently constituted, and professing different rules of law. They may be divided into two classes, which vary considerably from each other, as they

\* 1 *Reeve's English Law*, 48. *Madox, Exchequer*, c. 3, and 19.

both do from those already mentioned, the courts of Equity and the courts regulated by the maxims of the canon and civil law. The courts of Equity were, perhaps, rendered necessary by the defects and inadequacy of the common law, though they profess to act in its spirit, and to aid its operation. The ecclesiastical and maritime courts, on the other hand, may be considered as existing rather in derogation of the common law than in support of it.

The peculiar jurisdiction of Equity, its origin and growth, have been matter of much learned inquiry ; but all authorities seem to agree in the opinion that there are few evidences of its existence before the 15th century, and that its present form must be referred even to a later period.

The fiduciary system of the Roman law, adopted by the clerical chancellors for the purpose of modifying the system of the feudal tenures, appears to have given rise to the earliest instances of a jurisdiction purely equitable.

The hardships of military tenure having been severely felt, people were driven to devise various means for its evasion. The feudal tenant conveyed his property in due form to two or three persons, on whose honour he could depend, who were ostensibly and in the eye of the law the owners, but who (it was privately understood between them) were to allow the person who had so conveyed his property to them to enjoy and dispose of it as he pleased. Whenever any of them died, the property, according to the rules of the common law, went to the survivors ; a new trustee was then appointed in the place of the one dead, and the others conveyed the property jointly to him with themselves : thus a constant succession was kept up. By this means no fines ever accrued to the lord on the admission of an heir ; a person entitled was always in existence : neither was there any minority, during which the lord might enter and take possession of the land without accounting for the profits. Another advantage was, that the person beneficially entitled was enabled to devise or alienate his property at any time, and that, too, without the ceremonies required by law : he had only to signify to his trustees the person to whom he wished to leave or transfer the property, and, thenceforth, they held it in trust for him. There existed, however, only a moral obligation on the trustee to perform the trust ; if he refused, the person who had confided in him had no redress. The common law courts refused to interfere : the law required certain formalities to invest a person with the possession of his property, and these had not been complied with : however just it might be that the person on whom his friend had relied should perform his trust, still it rested solely between him and his conscience, there was no power to compel him. At length the Chancellor, who being an ecclesiastic, asserted a peculiar right to interfere in matters of conscience, and who was not, perhaps, disinclined to seize an opportunity of aggrandising his power by creating a new jurisdiction, issued a writ summoning the party who had committed the breach of good faith to appear and answer for it in the Court of Chancery. It was out of this court, it must be remembered, that all writs issued with which proceedings commenced in the higher courts of justice ; and, in those early times, it frequently

happened that the Chancellor not only had to issue, but, in cases where no precedent could be found, to invent writs so framed as to give relief on new emergencies. The *subpoena* has been thought to be a forced exercise of this power. In after times, the court, as we shall see, very much widened the scope of its jurisdiction; but this has been considered, by Blackstone, as its origin.\*

It was not, however, without considerable opposition that this new assumption of power by the Court of Chancery was established; numerous petitions were from time to time, presented by the Commons to have the writ of *subpoena* declared illegal. The court, however, retained its jurisdiction, and the petitions of the Commons were ineffectual.†

In consequence of this jurisdiction of the courts of Equity, the strange anomaly exists, that in Westminster Hall, within the space of a few yards only, different persons are regarded as the owners of the same estate. In the courts of Equity, the *cestui que trust* is treated as actual owner; in the courts of common law, the title of the *trustee* only is recognised.

In early times, the office of Chancellor was invariably held by churchmen. Sir Thomas More was the first Chancellor educated as a lawyer. After him the seals seem to have been held by lawyers and churchmen indifferently. The credit of forming our present system of equity jurisprudence, and of fixing the limits of its jurisdiction, is generally ascribed to the Earl of Nottingham, Chancellor in the time of Charles II. In practice, however, the decisions of Lord Hardwicke are, perhaps, most frequently referred to. In the chancellorship of Lord Ellesmere, in 1616, occurred the famous question between the courts of law and equity, whether the Court of Equity could give relief after or against a judgment at common law? The question was submitted to the King who referred it to his counsel for their opinion. They decided, as is well known, in favour of the courts of equity; and their power has ever since been acknowledged.

The reader must carefully distinguish between the Court of Chancery as a court of common law, and as a court of equity. Formerly its powers were chiefly active in the former branch of its jurisdiction, which was, and still is, called the *Latin* side, because its proceedings on this side were in Latin, like those of other common law courts. In modern times, its equitable jurisdiction, carried on by *English* bill and other comparatively recent methods of procedure, has attained a degree of importance that has thrown into obscurity its other and earlier functions.

It may not be out of place to observe here, that the distinction now adverted to between the use of Latin and English, as employed by the courts of common law and of equity, continued without intermission, except during the Commonwealth, down to 1730, when an act passed for the enrolment of all pleadings in English.

The *Ecclesiastical Courts* are next to be mentioned. In the Saxon times, as already seen, both civil and ecclesiastical causes were brought

\* Another opinion derives this jurisdiction from the *concilium regis*. See *Hale's Jurisdiction of Lords*, p. 44. *Palgrave on the Council*, p. 40, et seq.

† 3 *Reeve's English Law*, 188.

before the same tribunal. William, however, soon after the Conquest, either from a wish to conciliate the Church, or from a fear that churchmen might engross the whole authority in the ordinary courts to the exclusion of laymen, separated the two. The ecclesiastics were thenceforward allowed to have exclusive cognisance in all matters relating to the Church, or in which its ministers were concerned, with the exception of criminal cases. In subsequent reigns, and particularly under that of Stephen, attempts were made by the churchmen to extend their jurisdiction to criminal matters. These pretensions were, however, disallowed by the "Constitutions," as they are termed, or articles agreed upon in a parliament held at Clarendon in 1164. They declare, among other things, that all clerks summoned to answer for a crime should come before the king's justices; that, if convicted, the church should afford them no protection; that ecclesiastics should not quit the realm without the king's license; that all causes not ecclesiastical should be determined in the king's courts; and that even in ecclesiastical causes no appeal should proceed beyond the archbishop's court without the king's assent.\*

But despite these constitutions, the line of demarcation between the ecclesiastical and temporal jurisdiction was long the subject of dispute: in the end, however, the writ of *prohibition*, issuing out of the temporal courts, checked the usurpations of the former, and reduced their powers within moderate and well defined limits.

The Court of Admiralty was rendered necessary as England became a commercial nation: its institution is ascribed to Edward III. Necessarily involving, as it did, the wider principles of jurisprudence and international law, it was established, not improperly, on the principles of the civil law.

The Bankruptcy Courts, and the court for the relief of insolvent debtors, are courts which, in like manner, have been called into existence by the wants of the nation. The former have been remodelled by various late Acts. The first establishment of a court for the relief of insolvent debtors took place in the reign of Geo. III.

From the preceding sketch, it will be seen, that the subjects of this country are governed by at least three systems of law simultaneously administered through the medium of different courts: the civil or canon law; the law of chancery or equity; and the common law. Each yields to the other an exclusive jurisdiction within its peculiar sphere, while the common law asserts its claim to pre-eminence by exacting from the others a general subordination to its maxims. Thus, it has become a rule that "equity follows law;" and where the spiritual court deviates from its jurisdiction, or attempts to impugn a principle of the common law, a prohibition from one of the superior courts of Westminster reduces it to obedience.

The common law is the general and immemorial custom of the kingdom, and is emphatically the law of the land. Other laws only prevail by permission, and bear no relation to the general policy of our institutions. Of the origin of the common law no record remains. Hence it is called *lex non scripta*; not as being founded on the

\* See the articles at length, in *Lyttelton's Life of Henry II.*, vol. iv., pp. 28 and 414.

universal law of reason, but as being traditional only and not founded on any known acts of the legislature. It rests on the decisions of the judges registered in the different courts, and preserved among their records. In matters of importance and nicety these original records are referred to; but, for ordinary purposes, *Reports* of the different cases in which any new question arises are printed and published from time to time. The reports contain a statement of the facts, a short outline of the arguments made use of by counsel, the authorities referred to, and the decision of the court. In early times, that is, from the reign of Edward II. to that of Henry VIII., these reports were made by officers appointed by the court specially for the purpose, and were then termed year-books. At present they are the work of private hands, generally a barrister's. So voluminous have they become, that an ordinary law library contains from 350 to 500 volumes, and every year adds three or four more, exclusively of the reported cases in equity and the ecclesiastical courts. The common law is continually undergoing alterations by Acts of Parliament, which thenceforth become the law of the land. It prevails in all the common law courts with the exception of those which are regulated by peculiar local customs of their own, differing, more or less, from the general common law of the kingdom. Particular customs are also to be met with in certain districts, as the law of gavelkind in Kent, borough English, the customs of manors, of the stannaries, and other local usages. The courts of equity, in a great measure, profess to adopt wider and more liberal principles of justice; but like the courts of common law, they are now chained down by the precedents of previous decisions, of which minutes are kept and reports made, as at common law. It is only when a new point arises, that a judge, either of law or equity, can exercise any latitude of decision; and, even then, he must be guided by existing principles of equity, and by the general analogies of law; this, indeed, is the meaning of his oath to decide "according to law."

The *ecclesiastical laws* are founded, for the most part, on the civil and canon law of Imperial and Papal Rome. The canons of the Church are said to have been adopted in England as early as the seventh century; but the system of laws at present in force depends upon the decretals and constitutions compiled and promulgated under the influence of successive councils and popes at various periods. In England, where the canon law has been considered in many points repugnant to the common law of the land, its authority has been restrained within narrow limits. So much of it only has been received as has been gradually accommodated to the habits and customs of the country; and the ecclesiastical laws may now be described, in the language of our statutes, as "laws which the people have taken at their free liberty by their own consent to be used among them, and not as the laws of any foreign prince, potentate, or prelate."

*Present State of the Courts.*—We now proceed to give a short outline of the several courts, as they at present exist, omitting those only which, though not formally abrogated, have fallen into disuse. The first in order are the Common Law Courts, which, as we have already said, are susceptible of a two-fold division, viz., into such as

have a civil, and such as have a criminal, jurisdiction. Many of them, indeed, have both; but as the same court differs materially in its civil and criminal capacities, we shall, for the sake of clearness, consider them separately.

## SECT. 2.—*Courts of Civil Jurisdiction.*

1. *House of Lords.*—The House of Lords, under the technical name of the Court of our Lord the King in Parliament, is a court of record, and the highest court of judicature in the kingdom. Its constitution has been already described. It possesses at once a civil and a criminal jurisdiction: in its latter capacity it will be considered hereafter. As a civil court it has an appellate jurisdiction only, to rectify any erroneous judgment of the courts below on matters of law. In the execution of this duty, the Lords never receive any additional evidence, whether they sit on error from the common law courts, or on appeal from a court of equity.

The paramount jurisdiction of the *Magnum Concilium* under whatever name subsisting, from the most ancient periods of our history, has been already adverted to. The judicature of the Peers is the legitimate descendant and representative of this great council of the King in Parliament. A question may suggest itself to the reader, by what means this ultimate and supreme authority of the *Parliament* became vested exclusively in one only of its constituent bodies, the House of Peers? It must suffice to reply, that this question *has*, in fact, frequently occurred to our ancestors, and has been the subject of warm contest between the two houses; nor was it, until comparatively recent times, that the judicature of Parliament was finally settled to be the exclusive inheritance of the Lords. The reader who wishes to pursue this inquiry, will be abundantly satisfied by resorting to the learned treatise of Lord Hale on the subject, with the introductory observations of Mr. Hargrave.

The House of Lords is now, therefore, in all cases the court of last resort, from whose judgment there is no further appeal. Every subordinate tribunal must conform to its determinations. The Lords sit in the morning for the hearing of causes, when some of the law lords, including the Chancellor, or, in his absence, one of the deputy speakers, invariably attend; and by these, in fact, causes are decided, the lay lords seldom or never interfering in the matter. The appellate jurisdiction of the House of Lords over the courts of common law is only exercisable, it is to be observed, upon writs of error.

2. *Judicial Committee of the Privy Council.*—The Council has always exercised very extensive judicial functions, both original and appellate; but the secrecy of its proceedings, and the undefined limits and irregular exercise of its authority, long rendered its jurisdiction the object of well founded distrust and suspicion.\* The Star Chamber and Court of Requests, dissolved in the reign of Charles I., were off-sets of this council.† In its former records are to be found the most

\* As a court of common law, it has not been recognised by our constitutional lawyers; see *Hale's Jurisdiction of the Lords*, p. 5. See, however, *ibid.*, p. 37.

† *Palgrave on the Councils*, p. 38, 90.

startling deviations from the maxims and principles of the common law of the realm.\* Since the Revolution, however, the proceedings of the Privy Council have been confined within known and reasonable limits; its decisions in matters affecting the rights of the subject have been openly promulgated, and it has lately undergone material amendment by the erection of the judicial committee. This court was established, or rather remodelled, by the 3 and 4 William IV., c. 41, which provides that the President for the time being of the Privy Council, the Lord Chancellor, and such of the members of the Privy Council as shall from time to time hold certain judicial offices enumerated in the Act, and also all persons, members of the Privy Council, who shall have been President thereof, or been Lord Chancellor, or held any of the above-enumerated offices, shall form "The Judicial Committee of the Privy Council;" power being, at the same time, given to his Majesty to appoint any two other persons, being Privy Councillors, to be members of the said committee. The court thus formed has succeeded to the jurisdiction of the Privy Council, with increased powers. The matters which come before it are, chiefly, appeals from the Ecclesiastical Courts, formerly tried by the delegates; from the Admiralty Courts in civil causes; from the decisions of the various courts of judicature in India, the Colonies, and the Channel Islands; matters of appeal and petition to his Majesty, which previously used to be heard before a committee of the Privy Council appointed for the purpose; petitions for the renewal and confirmation of patents; together with the consideration of all matters whatsoever which his Majesty shall deem it fit to refer to them. No matter, however, can be heard except in the presence of four members. The committee is expressly empowered to examine witnesses *viva voce*, or on written interrogatories, as they may think fit; and the necessary powers are given for compelling the attendance of witnesses, and the production of deeds and papers. The court may also, if it think fit, direct a cause to be reheard in the court below, or a feigned issue to be tried upon any matter of fact in the common law courts. It may also refer any question to its registrar to investigate, in the same way that the Court of Chancery does to one of its masters. The method of proceeding is by petition addressed to the King in council.

3. *The Court of Chancery*.—The authority of Chancery, as a court of common law, has been already alluded to. One of the most important duties of the Chancellor used to be the issuing of *original writs*, for the purpose of giving jurisdiction to other courts, in matters between party and party. In this character, it has been entitled the *Officina Brevium*. Proceedings in *scire facias* with a view to the repeal of any charter or letters patent of the Crown, are also instituted in this court on the common law side. Some other examples of its common law jurisdiction might be mentioned; but as its exercise is now of comparatively rare occurrence, they are omitted. It has not, nor ever possessed, the power of trying any issue of fact by a jury, but always remits it for trial to some one of the superior courts at Westminster. It should be observed, too, that the issuing of original writs has been much contracted by the new Process Act, which has given to

\* See *Jardine on the Use of Torture*, ed. 1837.

each superior court the power of issuing a process of its own for the purpose of commencing all personal actions.

4. *The Exchequer Chamber.*—The next court in point of dignity is the Exchequer Chamber, which is also a court of record; it has an appellate, but no original jurisdiction. As originally constituted, it consisted of the Lord Chancellor and Lord Treasurer, with the justices of the King's Bench and Common Pleas; and the court so constituted still exists for some purposes. But the Exchequer Chamber, as an ordinary court of error, has been newly modelled by a late act, by which it has now an appellate jurisdiction over all the three courts at Westminster. As now constituted, the court, in cases of error from either of the three superior courts of common law, consists of all the judges of the other two.

5. *King's Bench, Common Pleas, and Exchequer.*—These are all courts of record. The highest of the three, in point of rank and jurisdiction, is the Court of King's Bench. In former times the King sate in it in person; and if required it would, even now, be obliged to be attendant on his person, wheresoever he might be in England; nor are early instances wanting of its having sat out of the realm. It has, however, been long stationary with the other two; and the King, though he may still, perhaps, have a right to be present, can no longer lawfully interfere in the proceedings. James I. is said to have been the last who made the attempt. The Court of Common Pleas ranks next to the King's Bench: it was, as previously stated, originally confined to pleas between subject and subject, though it has now obtained a somewhat more extended jurisdiction. An express provision of the *Magna Charta* made it stationary at Westminster. The Court of Exchequer originally was devoted exclusively to matters connected with the King's revenue, but it has long since become an ordinary court of justice.

In their constitution, these three courts very much resemble each other. In each there are at present five judges, viz., a chief and four puisne judges—in the Exchequer styled barons—with sundry inferior officers to conduct the formal part of the business. The number of judges in each court has often varied: there were usually four in each. The Lord Treasurer and Chancellor of the Exchequer in strictness are members of the court of Exchequer, but have long ceased to sit in it judicially.

In England, previously to the Revolution, judges held their situations *durante bene placito*, and might be removed by the sovereign; but when this is the case, as it still is in many countries, it would be too much to expect that the judges should manifest much independence in cases in which the Crown is concerned. Subsequently to the Revolution it was enacted, in order to provide in as far as possible for the independence of the judges, by the stat. 13 Will. III, cap. 2, that the commissions of the judges should be made *quamdiu se bene gesserint*; that their salaries should be ascertained and established; and that they should not be removable except by an address from both houses of parliament. Their commissions, however, continued to be vacated by the demise of the sovereign till the accession of George III., when it was enacted that the demise of the Crown should no longer vacate the

judges' commissions. Any complaint against the judges for misconduct in the execution of their duty must be referred to parliament; no ordinary tribunal can take cognizance of it. The respective salaries of the chief justices of these courts are fixed by the 2 and 3 Will. IV. c. 116 at 10,000*l.*, 8,000*l.*, and 7,000*l.* a year; the salaries of the puisne judges are the same, or 5,000*l.* a year each, in all the courts.

The three courts mentioned above sit at Westminster, for transacting business every day during term. The terms are four in number; and were framed by our ancestors, partly as marking the periods of the year when secular business might be transacted without interfering with religious duties, and partly with a view of avoiding the time when the people might be supposed to be engaged in necessary agricultural pursuits. They depended, in a great measure, on the moveable feasts. By a late Act, however, they have been fixed, with some variation in consequence of the Easter holidays, as follows:—

|                 |                                         |
|-----------------|-----------------------------------------|
| Hilary Term     | begins January 11th, ends January 31st. |
| Easter Term     | — April 15th, — May 8th.                |
| Trinity Term    | — May 22nd, — June 12th.                |
| Michaelmas Term | — Nov. 2nd, — Nov. 25th.                |

The business of the judges is not, however, confined to their attendance upon their respective courts at Westminster. During vacation fourteen of them travel on the circuits, the other remaining in the metropolis to transact casual business. Besides this, during term a puisne judge attends every day at chambers in Serjeants' Inn. Two judges have to attend the New Central Criminal Court, and two must also attend to private bills, from twenty to thirty of which are usually referred to them in the course of a session. To this may be added their attendance in the House of Lords and on special commissions. They are, moreover, required occasionally to sit on judicial committees of the Privy Council, and to decide on appeals against tax assessments. When to these various and onerous duties are added the time necessarily consumed in investigating cases, preparing judgments, arranging minutes, &c., the reader will, perhaps, be disposed to think that the office of a judge is by no means a sinecure.

In the common law courts the judicial power is not vested exclusively in the judges; whenever the truth of any fact is in issue, it must be decided by a jury, who are in truth the *judges of fact*.

*Juries.*—Juries are of two kinds, grand and petty. The grand jury is confined exclusively to criminal courts, and will be noticed when we come to speak of them. The jury we have now to consider is the petty jury, which is the general and almost universal instrument for the investigation of truth in the common law courts, whether criminal or civil; though in the latter it is usually known by the name of the *common* jury, to distinguish it from the *special*. It consists, in civil cases, of twelve "free and lawful men," who must be taken from the body of the county in which the cause of action, or the *venue*, as it is termed, is laid. The jury process in crown cases usually styles them "honest" or "good and lawful men."

With the exceptions hereafter specified, the following persons are qualified to serve on juries for the trial of all issues, civil and criminal,

in the king's courts at Westminster, and at the assizes, and on grand and petty juries in the courts and sessions of the peace, in the county, riding, or division, where they respectively reside. (6 Geo. IV. c. 50.)

1. Every man between the age of 21 and 60 years residing in England, having in his own name, or in trust, 10*l.* *per annum*, of clear yearly income, arising from lands and tenements, whether freehold, copyhold, customary tenure, or ancient demesne, or rents issuing thereout in fee simple, fee tail, for his own or other person's life, or such income or rents jointly issuing, amounting together to the clear yearly value of 10*l.*

2. Every man having 20*l.* a year clear from lands or tenements held by lease for 21 years or upwards, or for any term determinable on any life or lives.

3. Householders assessed to the poor rate, or to the inhabited house duty, in the county of Middlesex, on a value of 30*l.*; in any other county, 20*l.*

Lastly. Persons occupying any house containing not less than 15 windows.

Persons residing in Wales are eligible to serve on juries who are qualified to the extent of three-fifths of any of the foregoing qualifications.

The following persons are exempted from serving on all juries and inquests whatever: peers, judges, councillors, attorneys, proctors, coroners, gaolers, and keepers of houses of correction; clergymen in holy orders; Roman Catholic priests, having taken the oath required by law; dissenting ministers, whose places of worship are registered, and who follow no secular occupation, except that of schoolmaster; officers of the army and navy on full pay; physicians, surgeons, and apothecaries duly licensed and actually practising; servants of the royal household; pilots licensed, and masters in the buoy or light service; officers in the customs and excise; officers of courts of justice actually exercising the duties of their offices; sheriffs officers, high constables and parish clerks. It was also resolved, in the session of 1826, that members of the House of Commons are privileged from serving on juries while attending their duties in Parliament.

No man, not being a natural born subject, is qualified to serve on juries or inquests, except on the trial of aliens; nor any person convicted of any infamous crime, unless he have obtained a free pardon; nor any man under sentence of outlawry or excommunication.

No justice shall serve on any jury at the sessions, for the jurisdiction of which he is a justice.

After serving and obtaining the sheriff's certificate, persons are free from again serving on juries for certain periods; in the counties palatine, or the principality of Wales, or in Hereford, Cambridge, Huntingdon, or Rutland, for one year; in the county of York, for four years; in any other county, except Middlesex, two years.

No one is qualified to serve on a sheriff's or coroner's inquest, upon a writ of enquiry, who is not qualified to serve on a *nisi prius* jury: but this does not extend to inquests taken *ex officio*; nor to any city,

borough, liberty, or town corporate, in which the usual custom of the place must be observed.

The method of forming the jury lists is as follows:—In the first week of August in every year the clerk of the peace for the county, riding, or other district, issues his warrant to the high constables of the different hundreds, or other subdivisions, directing them in like manner, to issue their precepts to the churchwardens and overseers of the different parishes, requiring them to make out, before the first week of the September following, lists of all such persons within their respective parishes as are qualified and liable to serve. These lists, when made out, are fixed on the church door the three first Sundays in September, and copies are kept by the churchwardens and overseers for inspection. The lists are then revised by the magistrates at a petty sessions held for the purpose, when objections may be made by any person who thinks himself improperly inserted; after which they are transmitted to the high constable, who gives them at the next general quarter sessions to the clerk of the peace, to be by him placed among the records. A copy, however, is first made out in a book, which is called the jurors' book, and delivered to the sheriff. Out of this book the sheriff copies into another list, which is termed the special jury list, the names of all such as are described as esquires, or as persons of higher degree, or as bankers and merchants. The book and the list so made out come into use on the 1st of January in the succeeding year, and from them the sheriff selects his juries for the different courts, as occasion requires; from the former the common, and from the latter the special juries.

When a jury is required, writs issue to the sheriff directing him to summon one; and the sheriff thereupon issues his summons to the jurors, who must appear at the place of trial, pursuant to their summons: if they do not, they may be fined. At the trial the names of the jurors, if common, are written on separate pieces of card or parchment, and put into a box, out of which they are drawn one by one, when either party is at liberty to object.

The court may, on the application of either party, order a *special jury* to be returned. The method of selecting a special jury differs in some respects from that of choosing a common jury. When a special jury is required, a time is appointed previously to the trial, for both parties to attend the under-sheriff; when he copies from his special jury list the names of such as appear there, on separate pieces of parchment and puts them into a box, from which they are drawn one by one, in the same manner as in the case of a common jury: each party being at liberty to make objections. If any be objected to, that name is passed over, and another is drawn, and so on until the number of 48 is completed. If 48 names cannot be obtained from the special jurors' list, the officer shall fairly and indifferently take such a number of names from the common jurors' list as will make up that number: the officer then furnishes each party with a list of the names, places of abode, and additions of the jurors, and the parties meet again by appointment on a subsequent day, and respectively strike off 12. The remaining 24 are then returned upon the panel: if any of these

are absent on the trial, *talesmen* to complete the number may, at the prayer of the parties, be taken from the common jury panel. The same jury may try any number of causes; but the court has a discretion, on application from any man who has served, to discharge him from serving upon any other jury during the same assize. The usual allowance made to special jurors is one guinea for each cause tried by them.

It is sometimes thought advisable that the jury should view the premises in question; in such a case the process directs the sheriff to have six or more of the jurors (who must be previously agreed on by the parties, or in case the parties cannot agree, be nominated by the sheriff) at the place in question a convenient time before the trial, in order to inspect it; and it is to be shown them by persons acquainted with the locality. The sheriff, in his return to the process, must mention the jurors to whom the view has been given and they must be of the jury at the trial.

*General Remarks on Jury Trial.*—Next to the security afforded by the freedom of the press, *trial by jury* has been the grand bulwark of the liberties of the people of England. This institution is of very remote origin, and, though its history be obscure, it was at one time introduced into most European countries.\* It is expressly laid down by the great charter, that "*nullus liber homo capiatur, vel imprisonetur, aut exulet, aut aliquo alio modo destruatur, nisi per LEGALE JUDICIUM PARIUM SUORUM, vel per legem terræ.*" "The founders of the English laws," says Blackstone, "have with excellent forecast contrived that no man should be called to answer to the king for any capital crime, unless upon the preparatory accusation of 12 or more of his fellow subjects (the *grand jury*); and that the truth of every accusation, whether preferred in the shape of indictment, information, or appeal, should be afterwards confirmed by the unanimous suffrages of 12 of his equals and neighbours (the *petty jury*), indifferently chosen, and superior to suspicion. So that the liberties of England cannot but subsist so long as this *palladium* remains sacred and inviolate, not only from all open attacks, which none will be so hardy as to make, but also from all secret machinations, which may sap and undermine it, by introducing new and arbitrary methods of trial, by

\* The introduction and progress of jury trial is involved in much obscurity. Dr. Pettingall, in his learned *Essay on the Use and Practice of Juries* (4to. London, 1769), shows that they were extensively used by the Greeks and Romans; and he contends that they were introduced by the latter into Britain, Gaul, and the contiguous parts of Germany. It has, indeed, been usually supposed that juries, however derived, were in use in this country among our Anglo-Saxon ancestors. But there is really no good evidence to show that such was the case (Hallam, *Middle Ages*, ii. 296—401); though it cannot be positively affirmed that it was not. On the whole, the fair presumption would seem to be that, if not introduced, the use of juries was at all events much extended by the Normans, who had, most probably, brought a knowledge of them from Scandinavia, where the judicial number *twelve* was always held in the highest veneration. As previously seen, trial by jury had become of considerable importance in the reign of Henry II.; it would derive additional estimation from the above clause in *Magna Charta*; and it appears to have been established nearly in its present form in the reign of Henry III. (Stephen, *Commentaries on the Laws of England*, ii. 588, &c.)

justices of the peace, commissioners of the revenue, and courts of conscience." (Book iv. cap. 27.)

With the exception of England, trial by jury, in most other countries, was not long in being either suppressed or perverted; that is, juries were either entirely dispensed with, and the power to try prisoners entrusted to judges appointed by the different governments, or the institution was kept up in name only, its object and spirit being totally changed. Instead of jurymen being "indifferently chosen, and superior to suspicion," which is of the very essence of jury trial, they were not unfrequently selected by the crown, or its creatures! When so perverted, this institution, from being an efficient protection against unjust and unfounded accusations, becomes a most convenient and dangerous instrument in the hands of an unprincipled government. Hence, it is always impossible to form any fair estimate of the judicial systems of any two or more countries, or of the protection afforded by each to life and property, from merely learning that trial by jury is established in them. Everything depends on its organization. If juries be fairly and impartially chosen from the mass of the people, they are the best bulwarks that can probably be devised for the protection of innocence; but if otherwise, if they be named, or their election influenced, by judges or government officers, they throw a constitutional veil over the acts of the oppressor, and are, in all respects, most inimical to the public interests.

In England, the selection of jurymen having been generally, and always since the Revolution, made on fair principles, jury trial has been deservedly in the highest degree popular. In most countries, the fact of government bringing a charge against an individual, and his condemnation, have been nearly identical; but it has been quite otherwise with us. Here the charge had to be referred to 12 individuals fairly selected from among the freeholders of the neighbourhood; and unless they were *unanimously of opinion that the charge was well founded*, the accusation fell to the ground, and no farther legal proceedings bottomed upon it could be instituted against the accused.

The signal benefits derived from jury trial in criminal cases, and especially in charges of treason and sedition; and the fact that, were it given up in one class of cases, it might gradually fall into disuse in others, seem to be the principal cause of its being continued as a means of trying all descriptions of civil suits. The fair presumption, however, would seem to be, that a large class of civil cases might be as well or better decided by a judge or judges appointed for that purpose; and one would be disposed to think that trial by jury might now be advantageously confined to that description of civil cases where the facts are disputed, for the investigation of which it is peculiarly well-fitted.

The vital importance of an indifferent selection of jurymen is obvious; but if any doubt should remain in the mind of any one with respect to it, that will be removed by comparing its influence in England with its influence in Scotland: in the former, it has been the best defence of the liberty of the subject; whereas, in the latter, it was,

down to a comparatively recent period, the readiest means government could employ to oppress and get rid of any obnoxious individual! This anomalous result was entirely owing to the fact that in England juries were fairly selected; while in Scotland they were nominated by the sheriffs and judges! Luckily, however, this gross abuse has, of late years, been obviated; and Scotland, is now, as well as England, in the *bonâ fide* enjoyment of a system of trial by impartial juries.

It is farther necessary to observe, that trial by jury is suited only to countries in a comparatively tranquil state, and that it is wholly unsuited to those distracted by civil and religious dissensions. In the latter, indeed, it is uniformly almost employed, either to secure an impunity to crime, or to oppress the innocent. Jurymen being selected indiscriminately from the middle class of the population, are animated by all the passions and prejudices of the party or sect to which they belong, and among which they live; and it is idle to suppose that individuals called from their ordinary avocations once or twice, perhaps, in two or three years to try a case, should be able to lay aside their prejudices, and to take a calm and dispassionate view of any question in which they are involved! For these reasons it would appear that how well soever it may be adapted to England or Scotland, jury trial is not at all adapted to Ireland. Religious and political prejudices are there too widely diffused, and too deeply rooted, to admit of the fair trial by ordinary juries, of cases affecting religious or political parties or partizans. In the case of the trial of Mr. O'Connell, and his associates in 1844, every body knew beforehand, that the issue would depend wholly, or almost wholly, on the composition of the jury, and that the guilt or innocence of the parties, or the nature of the facts to be established by the evidence was of comparatively trifling importance. With a jury of Protestants or anti-repealers, a verdict against the accused might have been expected almost as a matter of course, and conversely with a jury of Catholics or repealers! And supposing the jury to have been selected with the utmost impartiality, the result would have been quite a matter of chance, or would have depended on the accident of the majority of the jury consisting of individuals belonging to the one faction or the other. It is in fact, the greatest imaginable folly to talk of the fair trial by juries of political offences in a country like Ireland. How desirable, soever, it would be a contradiction and an absurdity to suppose it should take place. You might as well expect justice to Poles tried by Russians, or to Russians tried by Poles. Neither Ireland, nor any country placed under similar circumstances, is qualified for the general enjoyment or exercise of jury trial. And the attempt to enforce the law in political questions in such a country by such means, can lead to nothing but the perversion of justice, and the most painful results.

*Courts of Assize and Nisi Prius.*—These courts, as well as those already mentioned, are courts of record; they are held in every county twice in the year before commissioners appointed by the king for the purpose. When first instituted, justices *in eyre*, that is, itinerant justices, were accustomed to make circuits once in every seven years, for the purpose of trying causes, redressing the oppression of officers, inquiring into usurpations of royal franchises, and other matters. The

cycle of seven years was afterwards reduced by the great charter to one. The justices of assize were first appointed in the reign of Edward I. The number of the circuits has varied from time to time. At present they amount to eight, including those of North and South Wales. The commissioners appointed to travel the circuit always consist of the fourteen judges at Westminster, two for each of the English, and one for each of the Welsh circuits; the fifteenth remains in town. They select their respective circuits by private arrangement among themselves. Formerly no judge could travel the circuit which included the county where he was born, but this is not now the case. The judges hold several commissions, of which the principal are those technically termed of assize, *nisi prius*, oyer and terminer, and general gaol delivery. The first of these is now nearly obsolete. By virtue of the two second (through various fictions originating in ancient usages), they hold courts at which juries are summoned to try causes. It is to be observed that issues of fact in an action are not necessarily tried before a judge of the court in which the action was commenced; but if it be sought to set aside a verdict, or obtain a new trial, application must be made to that court. A number of counsel, greater or less in proportion to the business of the circuit, usually accompany the judges, and practise in these courts as in the courts at Westminster. All the serjeants on the circuit are joined in the commission, though their assistance is not required, unless there be a great pressure of business. The sheriff of each county is the chief ministerial officer for the service of process, and he is bound personally to attend during the continuance of the assizes. He provides convenient lodgings and a suitable escort for the judges at each circuit town.

By a late Act of Parliament, a power is given to the King in council to vary and to assign the places at which the assizes shall be held.

*County Courts.*—The old County Courts were incident to the jurisdiction of the sheriffs. They were not courts of record, but might hold pleas of debt or damages under the value of 40*s*.

These, however, have been superseded by the new County Courts established under the 9th and 10th Vict. c. 95, and subsequent Acts. Under the provisions of these statutes England and Wales are divided into 491 districts, and these again are classed into 60 circuits. To each of the latter a judge is allotted, who must hold a sitting in each of his courts at least once a month. The jurisdiction of these courts extends to any actions for debt or damage not involving more than 50*l*.; and even more important actions may be tried therein by consent of the litigants. Appeals to the superior courts of common law in London are admissible on points of law and as to the validity of evidence in actions for more than 20*l*., but an action is not removable by *certiorari*, except by leave of the Judge of the County Court, and then the claim must exceed 5*l*. A treasurer is appointed. To each circuit a clerk, assistant-clerk, and high bailiff form the permanent staff of each Court.

Since the institution of these Courts additional jurisdiction has been attached to them in certain matters connected with Insolvency, the winding up of Joint Stock Companies, Charitable Trusts, and Duty on Successions.

These Courts have been found to answer well, and have cheapened and facilitated the distribution of justice.

Under the 15th and 16th Vict., cap. 54, an office has been established in London for the Registration of all County Courts' Judgments for 10*l.* and upwards.

*The Hundred Courts and Courts Baron.*—These courts are so nearly allied to one another that they may be conveniently noticed together. The Courts Baron are (or rather were) held by lords of manors for their freehold tenants. The steward of the manor presides with the same duties and in the same character as the sheriff at the County Court. Courts Baron were formerly held every three weeks, and their most important business was to determine controversies relating to freehold lands held of the manor. They may hold pleas of personal and other actions when the debt or damages do not amount to 40*s.* The lord of a manor, in which there are copyholds, also holds a distinct court for that species of tenants, for the purpose both of determining pleas of land between them and for the alienation of their copyholds. This is not a court of record, and is now fallen into almost total disuse.

The Hundred Court, which is only a larger Court Baron, being held for the inhabitants of a particular hundred instead of a manor, is now entirely deserted.

*Courts of the Market or Pie Poudre.*—The only court remaining to be mentioned is the Court of the Market or Pie Poudre Court, as it is called. This is a court of record incident to every fair or market, of which the steward of him who owns or has the toll of the market is the judge, and its jurisdiction extends to administer justice for all commercial injuries done in that fair or market, and not in any preceding one; so that the injury must be done, complained of, heard, and determined, within the compass of one and the same day, unless the fair continue longer. Its judgments may be reviewed by writ of error to the Court of King's Bench. It is now, however, wholly disused; and is, indeed, all but entirely forgotten.

Any attempt to describe the proceedings in conducting cases before the courts now described, would involve so many technicalities as to be uninteresting and all but unintelligible to ordinary readers; while it must necessarily be useless to those professionally acquainted with the subject. Without, therefore, noticing these proceedings, we shall go on to inquire into the constitution of the criminal courts.

### SECT. 3.—*Criminal Courts.*

*House of Lords.*—The highest court of criminal judicature known to the laws of England is the House of Lords, under the style of the Court of our Lord the King in Parliament. It possesses an original and an appellate jurisdiction. As a court of original jurisdiction, it may be regarded in several characters. First, during the session of parliament, it constitutes a tribunal for the trial of such high state

offences as, either from the peculiar nature of the case or the rank of the offender, the ordinary courts of justice may be supposed incapable of dealing with : commoners as well as peers are within its jurisdiction. The prosecution in these cases is termed an *impeachment* ; which is a solemn charge or accusation preferred to the House of Lords by the Commons. The method of proceeding in an impeachment depends entirely on usage, which constitutes the law of Parliament as it does the common law of the land. When the Commons determine to prefer an impeachment against any one, they send a message to the Lords to that effect, and pray that the offender may be attached. Upon this the Lords order the Usher of the Black Rod to take him into custody ; in certain cases they take bail, but this is discretionary. The Commons next proceed to prepare the impeachment, which is done by a committee : the impeachment contains the different charges drawn up separately in distinct articles. When the articles of impeachment have been prepared they are sent up to the Lords, who send for the prisoner, and order them to be read to him. The prisoner, having heard them read, usually prays that he may be allowed a copy, time to answer, and the benefit of counsel. The privilege of having counsel, as a matter of right, extends only to the case of persons impeached of high treason, and misprision of treason ; in these cases it was granted by the 20th of Geo. II. In other cases it remains as before ; counsel are always granted, however, as a matter of course. As soon as the prisoner has prepared his answer, it is sent up to the Lords, by whom it is sent to the Commons ; the Commons consider it, and draw up an answer, or replication, as it is termed, which is forthwith sent to the Lords. A day is then fixed for the trial, of which notice is given to the Commons, who thereupon appoint a Committee of Management to conduct the prosecution. Sometimes they come to a resolution to be present at the trial in a body ; in which case the trial is had in Westminster Hall, where suitable accommodation is made for them. The Lords previously to trial address the King, requesting him to appoint a Lord High Steward to preside over and conduct the proceedings, though this is said not to be absolutely necessary. The Lord High Steward is appointed by commission under the great seal, and for the particular occasion only. He must not be confounded with the Lord High Steward of the court hereafter mentioned. The power of the one we are now speaking of is not, except in his character of president, greater than that of other peers ; like them, he has only a single vote ; the collective body of peers being here judges both of law and fact. The trial itself proceeds much as ordinary trials do ; evidence is gone into, and witnesses examined on either side ; the charge contained in each article is separately discussed and disposed of before the succeeding one is entered upon. The judges always attend, for the purpose of giving their opinion on any matter referred to them. On the trial being closed, the peers adjourn for the purpose of considering their verdict ; this being agreed upon, notice is sent to the Commons, and the prisoner is brought to the bar, when each lord separately delivers his opinion in the usual words "guilty" or "not guilty." After this, the Lord High Steward announces to the prisoner the result. Judgment, however, is not given until a subsequent day ; indeed, it is said the Lords cannot

give judgment until required by the Commons; so that if the Commons do not demand judgment, as has sometimes occurred, it has the effect of a pardon. This is the reason that the Commons in important cases always insist on being present at the trial, that, having heard the evidence, they may be the better able to decide in giving their votes on the question as to demanding judgment. Pending an impeachment, no interference is permitted on the part of the Crown. The King's pardon cannot be pleaded in bar, neither can he stop it by prorogation, nor even, it is said, by dissolution of the Parliament, though the latter seems doubtful. After sentence, however, has been given, the King may in this, as in all other criminal cases, grant a reprieve or pardon. It seems undetermined whether the bishops have or not a right of voting. They have generally remained in the House and voted on all questions during the trial, retiring only when the verdict was given, and then always under a protest, "saving to themselves and their successors all such rights of judicature as they have by law, or of right ought to have."

2nd.—The House of Lords constitutes a court for the trial of peers, and such as are entitled to the privilege of peerage, for certain offences: in these cases the indictment commences in one of the inferior courts, and is removed to the Lords by writ of *certiorari*. As this privilege belongs to the peerage, it extends to all peers, whether lords of parliament or not, as well as to peeresses, whether in their own right or by marriage only: in the latter case, however, if they become dowagers, and marry a commoner, they are held to have degraded themselves and forfeited their right. All peers who have a right to sit and vote in Parliament must be summoned; bishops, not being ennobled by blood, have no right to a summons or to a seat, neither can they be tried here. The privilege extends only to treasons, felonies, and misprisions of either; in all other offences, as libel, riot, &c., peers are tried, like commoners, in the ordinary courts. A conviction in this court cannot take place by a majority of less than twelve. When parliament is sitting, this court is the same with the one last mentioned. The Lord High Steward is in like manner appointed for the occasion, and with similar powers.

3rd.—The House of Lords, when parliament is not sitting, constitutes a court for the trial of peers, called the Court of the Lord High Steward. But in this, the power of the Lord High Steward differs from that of the Lord High Steward in the courts above mentioned. The Lord High Steward here sits as judge, and decides on matters of law; the peers deciding only on matters of fact. The office was once hereditary, but latterly it seems to have been usual to appoint some peer specially for the occasion. The bishops form no part of this court any more than they do of the one last mentioned, nor have they any right to be tried in it. This court, it should be stated, has never been summoned since the Revolution.

4th.—The House of Lords is in all criminal cases the ultimate Court of Error; an appeal lying to it from the King's Bench, to which latter it lies in like manner from all inferior courts. In these cases the facts of the alleged offence are not investigated afresh, but the error must be assigned for some matter apparent on the face of the

record. Writs of error to reverse judgments in criminal cases are not allowed of course; the *fiat*, or consent of the Attorney-General must be obtained on sufficient cause shown; but this being shown, they are said to be grantable *ex debito justitiæ*.

*Court of King's Bench.*—This is the highest ordinary court of criminal judicature within the kingdom. It has jurisdiction in all criminal cases from high treason down to the most trivial misdemeanor or breach of the peace. It was originally attendant on the person of the King, but has been long stationary with the other courts at Westminster. This court supersedes all other courts of ordinary criminal jurisdiction; so that, at common law, the authority of other commissions ceased, and was suspended by its sitting within the same county. The interruption of general business which this produced gave rise to an Act, (25 Geo. III., c. 15,) which enabled the sessions of oyer and terminer, and gaol delivery of Newgate to continue, notwithstanding the King's Bench was sitting at Westminster or elsewhere in the county. All offences committed in Middlesex may be originally prosecuted in it by indictment, as also misdemeanors committed in any county in England by information filed by the Attorney or Solicitor-General, *ex officio*, or by leave of the court at the relation of a private individual in the Crown Office. Different Acts of Parliament have made certain offences committed out of the kingdom cognisable here. Its constitution as a criminal court does not differ materially from its constitution as a court of civil judicature. The judges are the same in both, although the subordinate officers and ministers of the Crown and civil side are different; and the mode of procedure is the same as in other criminal courts. Except in cases in which the intervention of the grand jury is not required, it has no original jurisdiction out of Middlesex, or the county in which it is sitting. To the criminal jurisdiction of this court must be referred the issuing of various prerogative, remedial, and other writs, which are obtained in the King's name at the suit of a party interested in their execution. Thus, if a public officer neglect his duty, the party injured applies for a *mandamus*, whereby he is ordered, in the King's name, to do it or show cause to the contrary. So if a party indicted in any court of subordinate criminal jurisdiction within the kingdom shall have reason to be dissatisfied with the court in which he is about to be tried, he may (under certain restrictions in point of time) obtain out of this court a *certiorari*, by which the proceeding is *certified* into the King's Bench, and is thenceforth carried on under its authority; and the same writ may be issued at the suit of the prosecutor.

Through the means of these and other forms of process, this court, in fact, exercises an extensive remedial and visitatorial jurisdiction, correcting the abuses of public officers, superintending the proceedings of subordinate courts, ejecting the usurpers of offices and franchises, compelling the performance of public duties, and, to a certain extent, controlling, by its mandatory process, even the highest functionaries of the state.

*Courts of Oyer and Terminer and Gaol Delivery.* These Commissions, which confer criminal jurisdiction, are usually directed to the same judges of the superior court as the commissions which confer the

civil ; and the civil and criminal courts are held at the same time, one judge sitting in the one, the other in the other. The commissions which confer the criminal jurisdiction are three in number : 1, a commission of peace ; 2, a commission of oyer and terminer ; and, 3, a commission of general gaol delivery. Under the commission of oyer and terminer, they are empowered to inquire as well as to hear and determine, that is, they may first inquire by the grand jury or inquest, and then hear and determine by the petty jury : the third commission enables them to try and deliver every prisoner who shall be in the gaol when they arrive at the circuit town. Under the commissions of assize and *nisi prius*, though these are of a civil nature, the justices have, by virtue of several statutes, in certain cases, a criminal jurisdiction ; and where an indictment of treason, felony, or misdemeanour has been removed out of the court below by *certiorari* into the King's Bench, the record may be sent down to be tried at *nisi prius* ; but the judge at *nisi prius* does not proceed to judgment and execution thereupon, the record being returned with the verdict indorsed on it, to the Court of King's Bench, before which the ulterior proceedings are taken. A recent Act has, however, given the judge at *nisi prius* a power, in certain cases, to pass sentence upon the offender. The jurisdiction of the judges under the commission of the peace is the same as that of the magistrates at sessions, which will be mentioned presently. The courts of oyer and terminer and gaol delivery for Middlesex, previously to the 3rd and 4th Will. IV., for the erection of a new criminal court for the metropolis, used to be held at the Old Bailey. By this Act, however, a court called "The Central Criminal Court" is constituted, for the trial of all offences committed in the metropolis or the neighbourhood, within defined limits, not restricted to Middlesex. Two of the judges of the superior courts at Westminster, the recorder, common serjeant, or judge of the sheriff's court, always preside in this court. It has the jurisdiction of a court of oyer and terminer, and is held twelve times a year, and oftener if necessary.

*Sessions of the Peace.*—These are courts holden before justices of the peace within their respective counties or districts, for the trial of felonies, not capital, as well as most misdemeanors. They are of four kinds, viz. : the general sessions, the general quarter sessions, the special sessions, and petit sessions.

The *General Sessions* and the *General Quarter Sessions* are nearly similar. Both are courts of record held before two or more justices, one of whom must be of the quorum, which, as already seen, all justices now are ; both are similarly constituted, and possess the same jurisdiction, except, perhaps, as to some matters which are made expressly cognisable by the general quarter sessions only, and both are required to be held four times a-year in every county in England. The only difference seems to be, that the latter are held at stated times, whereas the former may be held at any time. All that is absolutely necessary, however, is, that sessions should be held four times ; when, therefore, they are held at the particular times stated, they are considered as general quarter sessions, and when at other times, as general sessions. In Middlesex, indeed, and the neighbourhood of the metropolis, in consequence of the great population, it is necessary to hold

both kinds ; so that sessions are there held eight times a-year. This is not the case, however, in any other county, and generally the sessions held are the general quarter sessions. The times for holding the general quarter sessions have been fixed for the first week after the 11th of October, the first week after the 28th of December, the first week after the 31st of March, and the first week after the 24th of June. The general sessions, as well as the general quarter sessions, may be convened by two justices, or by the *custos rotulorum* and any one justice, but not by the *custos rotulorum* alone, nor by one justice alone. In practice they are convened by two of the justices, by precept addressed to the sheriff, requiring him to summon the proposed session for the usual purposes ; to return the juries, and give notice throughout his bailiwick to all persons whose attendance is requisite. The precept also directs the sheriff to proclaim them, and requires him to attend himself, though he usually attends by deputy. The persons whose attendance is necessary, are the *custos rotulorum*, or his deputy the clerk of the peace, who has the custody of the county records, and must register all proceedings ; the gaolers and keepers of houses of correction, who must render an account of the state of the prisons and prisoners under their charge ; and the chief constables and petty constables.

The place of convening the sessions is fixed by the magistrates. It is usual, if the district be extensive, to adjourn them from one town to another, to save the expense of bringing the parties and witnesses to a distance.

Barristers (except such as are of the degree of king's counsel or serjeants), and attorneys practise in this court in the same manner as in the higher courts.

The jurisdiction of the sessions may be collected from the terms of the commission, which directs the justices "to inquire into, by the oath of good and lawful men of their county, and to hear and determine all felonies, trespasses, and all other crimes and offences of which such justices may or ought lawfully to inquire ;" subject to this provision, that "if a case of difficulty arise," they shall not proceed to give judgment, except in the presence of some justice of one of the benches or of the assize ; and in consequence murders and other capital felonies have been usually remitted for trial to the assizes. And now, by the 5 and 6 Vict., c. 38, for defining the jurisdiction of justices in general and quarter sessions, it is provided that neither the justices of any county, nor the recorder of any borough, shall, at any such sessions, try any prisoner for treason, murder, or capital felony, or for any felony which when committed is punishable by transportation for life, nor for any of the particular offences enumerated in the Act. Neither can the justices at such sessions try any newly created offence, unless power to that effect be given in the statute which creates it. There are, however, many offences and other matters which properly belong to the sessions, such as the smaller misdemeanors not amounting to felony, including offences relating to game, questions relating to the settlement of the poor and vagrants, alehouses, servants and apprentices ; the filiation and maintenance of bastard children ; the stopping or diversion of highways, &c.

In most of the larger boroughs quarter sessions are also held, formerly before justices of their own, and now before their respective recorders, under the provisions of the Municipal Reform Act. These have, in most instances, the same authority as the justices of the county sessions.

The proceedings in all these courts of sessions may, with certain limitations, be removed into the King's Bench, by writs of error or *certiorari*.

*Special Sessions* are required by law to be held for particular purposes, and some of them at stated periods; as, for the appointment of overseers, surveyors of the high roads, inspectors of weights and measures, and licensing ale-houses. These courts do not proceed by jury; they are merely meetings of one or two justices of the peace and their clerks. In some cases, indeed, the manner of holding them is particularly pointed out by the statute directing them; but in general they are convened either at the instance of the *custos rotulorum*, the clerk of the peace, or two magistrates, who issue a precept to the chief constable of the district, who in his turn issues precepts to the petty constables, and gives notice to the different magistrates. The decisions of the magistrates, both in these and the petit sessions next mentioned, are in most cases subject to reversal on appeal to the quarter sessions.

*Petit* or *Petty Sessions* are meetings of one or two justices by private arrangement among themselves. The chief business done at them consists in determining differences between master and man, taking cognisance of minor offences, as assaults, drunkenness, keeping disorderly houses, &c.; many of which, indeed, might be done by a single justice. Justices, in fact, fill two characters, being at once judges and magistrates of police. In the one character they decide; in the other they inquire and commit only, preparatory to some further trial. When they sit as judges, and decide, the place in which they sit is a court of justice, and as such is open. So in cases where a single justice can make a final decision, his room, even though it be in his private house, becomes a court of justice with all the incidents which belong to such court, and to the parties amenable to it. But when justices sit on a preliminary investigation merely, as on a charge of murder, they may sit with closed doors.

The *Sheriff's Tourn* and *Courts Leet* do not essentially differ, except in the extent of the district within their jurisdiction. Both are courts of record, and formerly were attended by all freeholders, and persons resident within their respective precincts. Their principal business was to view the frankpledges, that is, the freemen within the liberty, who, according to the Saxon system, were all mutually pledges for the good behaviour of each other. They have cognisance of breaches of the peace, and the chastisement of sundry inferior offences presented by the leet jury. Their business has, for the most part, devolved on the quarter sessions; but there are few ancient boroughs in which there is not a leet retaining something of its old jurisdiction; especially the presentment of nuisances. The constable of a township, also, is still regularly, and of right, chosen at the leet.

The *Coroner's Court* is also a court of record. Its duty is to

inquire, when any one dies in prison or comes to a violent or sudden death, by what manner he came to his end; and this must be done *super visum corporis*, i. e. on inspection of the body. The office of coroner has been already noticed.

*Method of Proceeding in Criminal Courts.*—The method of carrying on criminal prosecutions may be shortly described: and first of those carried on by *indictment*. The arrest, or initiatory proceeding, is usually done under the warrant of a justice of the peace. The warrant may be granted merely on suspicion, but this suspicion must be supported by the testimony of a witness on oath. It is directed to the constable or peace officer of the district in which the offence was committed, and requires him to bring the offender before the justices; which he accordingly is bound to do, if he can be found. The case is then further examined into, and if it appear to the magistrates that there is a sufficiently strong presumption of the guilt of the accused, they commit him to gaol. In cases which admit of it, instead of committing the prisoner, the magistrate takes bail for his appearance at the ensuing assizes or sessions. The witnesses examined by the justices are also bound to appear and give testimony at the trial. The complaining party, who is usually the person injured, is also bound to prosecute. The prisoner having been committed for trial, or bail (where this is admitted) taken for his appearance, the next step is the prosecution, which is usually carried on by indictment.

An *indictment* is a written instrument, accusing one or more persons of a crime or misdemeanor, preferred by the prosecutor to, and presented upon oath by, a grand jury. It must contain the particulars of the charge set forth with accuracy and precision, and must be supported by evidence. The only witnesses examined, however, before a grand jury, are those called for the prosecution, as the object of the inquiry is merely to ascertain whether there are sufficient grounds for putting the accused on his trial. The grand jury are bound by their oath not to divulge the evidence brought before them.

If, upon hearing the evidence, the grand jury think the accusation groundless, they indorse the indictment, "no bill." If, on the other hand, they are satisfied of the truth of its statement, they indorse it, "a true bill." The indictment is then said to be *found*, and the party stands indicted: but to find a bill, not less than 12 jurors must agree. The indictment, when so found, is publicly delivered into court.

Prosecutions are sometimes carried on without the intervention of a grand jury. They are then called *informations*.

Informations are of two kinds; 1st. those which are partly at the suit of the King, and partly for the benefit of the subject, and, 2nd. those which are brought only in the name of his Majesty. The former are usually brought upon penal statutes which inflict a penalty on the conviction of the offender, part of which goes to the King, and part to the informer, and which are in the nature of civil actions, differing only in this, that they are carried on by a criminal, instead of a civil, process. Informations which are at the suit of the King only, are either filed *ex officio* by the Attorney or Solicitor-General where the offence immediately affects the Crown or public safety, or by the Master of the

Crown Office, when the injury more immediately affects the rights of an individual. No information, however, of the latter description can be filed without leave of the court in which it is exhibited being previously obtained.

Informations can be filed for misdemeanors only; no man can be put upon his trial for a capital offence unless the accusation against him be first found sufficient by 12 of his countrymen.

If the accused be not in custody at the time the indictment is found, or the information filed (as in the latter case he never is), process must issue to bring him duly before the court. On an indictment, the court issues a warrant for the apprehension of the accused party; and on his being arrested, he is either committed to prison or bound over with sureties to appear at the ensuing assizes or sessions, as the case may be. It is usually at this stage of a prosecution that writs of *certiorari* are had to certify and remove the indictment with all the proceedings therein, from any inferior court of criminal jurisdiction into the court of King's Bench, which is the sovereign ordinary court in all criminal cases. When removed by *certiorari*, the trial may either be had at the bar of the court, or before the justices on the circuit at *nisi prius*. If, on an indictment being found, the offender either appear voluntarily or be already in custody, or be brought into court under the criminal process above mentioned, he is, in cases of felony, *arraigned*, or called to the bar to answer the charge which is then read over to him, he being at the same time asked whether he is "guilty or not guilty." If he plead guilty, his confession is recorded, and the court awards judgment. But if he plead "not guilty," he is put upon his trial. A jury is then called from the jurors in attendance, when either prosecutor or prisoner may, by challenge, object to any jurors, or in some cases to the whole jury. If the court allow the objection, another jury, or other persons, as the case may be, must be called. As soon as a sufficient number of unobjectionable jurors are called, they are sworn and the trial proceeds. The case is stated by the counsel for the prosecution, and evidence is adduced and examined in support of it. The defence is then entered upon, and the evidence in support of it brought forward. The prisoner, for this purpose, is allowed counsel to aid him in his defence, and to address the jury. When the case on both sides is closed, the judge sums up the evidence, and charges the jury in matter of law, and the jury give their verdict in the words "guilty," or "not guilty." If they find the prisoner "not guilty," he is then for ever discharged from the same accusation, and released. But if the jury find him "guilty," he is said to be *convicted* of the crime of which he was indicted. After an offender has been so convicted, all that remains for the court to do is to pronounce judgment, and sentence the prisoner to the punishment assigned to his offence. The judgment may be arrested, before it is pronounced, for any error on the face of the indictment; afterwards, it can only be avoided by a writ of error. If an error in the indictment is pointed out during the trial, the court will usually quash it, without putting the defendant to the expense of a writ of error; and if any doubt occurs upon the evidence as to the law, the judge may reserve the point for the opinion of the judges, and in

case of conviction, respite the sentence until that opinion is obtained.

In the quarter sessions, a great part of the business consists in hearing and determining appeals from the decisions of the petit sessions, or of single justices. In some cases it is necessary, on conviction, for the magistrates making their order to inform the party of his right to appeal. The appeals are entered preparatory to the sessions in the paper of the clerk of the peace, and are usually heard in the order in which they stand. Upon such appeals the inquiry is not confined to error in law; but the whole merits of the case may be entered upon afresh. The justices are, in cases of appeal, absolute judges upon all matters of fact, and also, if they think fit, upon all matters of law; they may, however, in cases where the writ of *certiorari* is not expressly taken away by statute, send up a case on proved or admitted facts for the opinion of the judges of the King's Bench. Where the *certiorari* is taken away, the court of King's Bench has no jurisdiction. The opinion of the justices is determined by that of the majority, the justices from whose order the appeal is made not voting. What is now stated of justices at sessions is applicable for the most part to the recorders of boroughs, since the Municipal Reform Act.

#### SECT. 5.—*Courts of Equity.*

The Courts of Equity are—the Court of Chancery, which is practically divided into five courts, viz.: the Lord Chancellor's Court, the Rolls' Court, and the Courts of the three Vice-Chancellors,—and the House of Lords, as a court of appeal. With the exception of the latter, which has been already described, they are all similarly constituted, and have nearly the same powers and jurisdiction. Unlike the courts of common law, they admit of no jury: a single judge presides in each, who decides at once on law and fact, unless the facts are so doubtful that he thinks fit to aid his judgment by the verdict of a jury, which he does by directing the trial of an issue or an action. And where a question which a court of equity is called upon to decide is purely legal, and, but for circumstances which bring it within equitable jurisdiction, would be properly determinable in a court of law, the judge in equity is in the habit of directing a case to be sent to a court of law, on which such court, after argument, returns a certificate of its opinion. With the exception of the House of Lords none of them are courts of record. The judges in the Court of Chancery are the Lord Chancellor, the Master of the Rolls, and the three Vice-Chancellors. The Lord Chancellor has been already spoken of in his political capacity. His salary is 10,000*l.* a-year, exclusive of his salary as Speaker of the House of Lords, and he has a retiring pension of 5,000*l.* a-year. The next in rank to the Chancellor is the Master of the Rolls, who is appointed by the Crown by letters patent, and holds his office for life. He administers justice in a separate court called the Rolls; hearing and determining the same matters as the Lord Chancellor, excepting cases of lunacy and bankruptcy; but all his orders and decrees must be signed by the Lord Chancellor before they

are enrolled. The Master of the Rolls is also the chief of the twelve masters in Chancery, and chief clerk in the petty bag office: he is the keeper, also, of all the records of the Court of Chancery after the decrees and orders have been enrolled; and on that account he was anciently styled *Guardien des Rolles*. The Master of the Rolls ranks immediately after the Chief Justice of the King's Bench: his salary is 7,000*l.* a-year.

Before the passing of the Act 3 and 4 Will. IV., c. 94, the Master of the Rolls did not hear motions, pleas, or demurrers; and whatever was presented for his decision, other than the hearing of causes, was brought before him by petition. By the above-mentioned Act, however, this was altered; and motions, pleas, and demurrers, are now heard by him in the same manner as by the other equity judges.

The office of Vice-Chancellor of England was instituted, in 1813, by the 53 Geo. III., c. 24, to relieve the Chancellor of a part of his duties; and on the transfer to the Court of Chancery of the equity business of the Exchequer two more Vice-Chancellors were appointed by the 5 Vict., c. 5. The senior Vice-Chancellor has 6,000*l.* a-year of salary, and the others 5,000*l.* each, with suitable pensions on retirement. An appeal lies to the Lord Chancellor from each of his assistant judges and from the Master of the Rolls.

The courts of equity have, like the common law courts, various inferior officers for getting through the details of business. The Court of Chancery has also an officer called the accountant-general, to whose charge the property of the suitors is committed. The effects of the suitors consist of cash, stock, and exchequer bills deposited with the Bank of England. It must not, however, be supposed that the Accountant-General has this sum under his arbitrary control: it merely stands in his name; and when any money is to be paid into or out of the Bank, or any investment made through the privity and concurrence of the Accountant-General, the payment is made under an order of the court. But the most important officers of the Court of Chancery are the Masters in Ordinary, of whom, as already stated, the Master of the Rolls is the chief. Exclusive of him, there are 11 masters appointed by the King's letters patent: their salaries, previously to the 3rd and 4th Will. IV., were principally derived from fees; but by that Act they are fixed at 2,500*l.* each, and, like the salaries of the Master of the Rolls and the Vice-Chancellors, they are charged on the Suitors' Fund. Whenever the court is unable to satisfy itself of a fact, or the matter is too intricate or tedious for its investigation, a reference is made to a master, and the cause stands over until he has made his report. There are also throughout the country Masters Extraordinary, as they are termed, usually solicitors, whose principal duty consists in taking the affidavits of parties living in the country. The judges in the Court of Chancery sit every day during term, Sundays and holidays excepted. During the sittings after term the Lord Chancellor sits in Lincoln's Inn Hall, and the Vice-Chancellors in courts near it; and the Master of the Rolls at his court in the Rolls' Yard.

The usual hours of sitting are from ten or eleven o'clock in the morning to three or four in the evening.

Immediately after and before each term the courts usually take a

short recess ; and in the beginning of August they usually adjourn for the long vacation, which lasts till the beginning of November.

There are no fixed days for hearing particular branches of business ; but, at the commencement of every sitting, each court issues what is termed a *seal paper*, detailing the plan of the business for each day.

The principal subjects which are treated of in a court of equity are trusts, charities, matters of account, fraud, accident, and mistake. By trusts, we mean not merely such as are expressly declared in writing, but such as are so in the construction only of a court of equity, as where one person has contracted with another for the purchase of an estate. The court considers the vendor from the time of the contract as being, in good conscience, a trustee for the purchaser, and on that ground compels him to perform his contract : and this forms one of the most marked distinctions between a court of common law and a court of equity. The former can only give damages for the breach of contract, whereas the latter enforces its performance. The decree of the Court of Chancery is said to be *in personam*, not *in rem*. It binds the person, not the subject matter, and calls upon a defendant by subpoena to do what it orders him. In some cases, indeed, in the event of a refusal, the court has now the power to appoint a person to perform the required act instead of the person refusing. Another advantage of the Court of Chancery is, that it compels a discovery from the defendant upon oath ; and, by thus sifting the conscience of the party against whom relief is sought, is enabled to do justice in a great number of cases, where a court of law, from its insufficient powers, would fail to furnish a remedy, and a defendant, but for this mode of compelling a disclosure of the truth, might prevail by concealing facts within his own knowledge. The Court of Chancery has also a jurisdiction in cases in which the ordinary courts of common law, from a defect in their constitution or forms of proceeding, are insufficient to provide a remedy. Besides these matters of equitable cognisance in which the several courts of equity have equal jurisdiction, there are some which are peculiar to the court of the Lord Chancellor : these are the care of idiots and lunatics. In bankruptcy the Lord Chancellor has also an appellate jurisdiction over the Court of Review, which can be exercised by him alone in all other cases.

The jurisdiction of the Court of Chancery, in point of extent, is considered *primâ facie* as reaching over the whole of the King's dominions ; and if suit be brought in a matter over which some particular court has exclusive jurisdiction, the *onus probandi* lies on the party taking the objection.

The principal local Chancery courts are those of the counties palatine, each of which has exclusive jurisdiction within its respective county. Their constitution and mode of proceeding are similar to that already described. There are also some other local courts of Equity, which are not of sufficient general interest to demand a separate notice.

#### SECT. 4.—*Court of Bankruptcy.*

This court was established by an Act passed in the 1st and 2nd of Will. IV. It is subdivided into three branches :—1. The Court

of Review; 2. The Subdivision Courts; and 3. The Courts of the Commissioners.

The Court of Review is at present composed of a chief judge and a puisne judge, a chief registrar, registrars, and other inferior officers. The chief judge must be a serjeant or barrister of ten years' standing; and the puisne judges must also be serjeants or barristers of ten years' standing, or five years' standing at the bar, having practised five years previously below the bar. They are appointed by commission under the great seal. The chief judge has a salary of 3,000*l.*, the others of 2,000*l.* per annum. They must not sit in parliament, nor practise as barristers. This court is at once a court of law and equity; it has power and jurisdiction to hear and determine all matters in bankruptcy, which, before the passing of the Act by which the Court was constituted, (1 and 2 Will. IV., c. 56,) were heard by the Lord Chancellor. The Act, however, gives an appeal from the decisions of the Court of Review to the Lord Chancellor, upon a special case to be approved and certified by one of the judges of the Court of Review.

An appeal to the House of Lords is allowed only in cases which appear to the Chancellor of sufficient importance, or where both parties wish to have it decided there, when it may be carried up to the House of Lords direct from the Court of Review. Barristers practise in this, in the same manner as in the other courts in Westminster Hall.

*Subdivision Courts, and the Courts of the Commissioners.*—The Courts of the Commissioners are held in Basinghall-street in the city of London, one being held before each. The commissioners are six in number, and are appointed in the same manner as the judges of the Court of Review. Their salary is 1,500*l.* a-year. Like the judges of the Court of Review they are not allowed to practise as barristers, nor to sit in parliament during such time as they hold their appointment. These commissioners are empowered to form two Subdivision Courts, consisting of three commissioners for each court. To these Subdivision Courts the single commissioner may, when any difficult question arises, adjourn the proceedings.

No single commissioner can commit any bankrupt, or any other person examined before him, otherwise than to the custody of the officer of the court; and he must be brought up before a Subdivision Court, or the Court of Review, within three days after his commitment. The Subdivision Courts, as well as the Court of Review, are courts of record. Besides the London commissioners, there are also commissioners in the country, at Manchester, Birmingham, and other towns, for conducting such bankruptcies as may be better managed there, or which are too trifling to be brought up to town. These are selected by the judges on the circuit, out of the barristers, solicitors, and attorneys on the circuit, and must be submitted to the Lord Chancellor for his approval. The business is conducted before the commissioners in the country in much the same way it is before the London commissioners. An appeal also lies from the decisions of the former to the Court of Review.

SECT. 6.—*Court for the Relief of Insolvent Debtors.*

This court was created for the relief of prisoners confined for debt, whether in the shape of damages under a decree of court, or for a sum of money owing to another. As remodelled by 7 Geo. IV., c. 57, it is composed of three commissioners, a chief and two puisne ones, who must be barristers of ten years' standing at the least. The principal inferior officers are a chief clerk, provisional assignee, and a receiver. It is a court of record, and has power to administer an oath, to compel the attendance of witnesses, the production of papers, and to fine and imprison, in the same manner as the superior courts at Westminster. In London it sits twice a week the whole year through, the attendance of one commissioner being sufficient. The powers of this court were materially altered and extended by the Act abolishing arrest on mesne process.

SECT. 7.—*Ecclesiastical Courts and Courts of Admiralty.*

The ordinary Ecclesiastical Courts are,—1. The Provincial Courts, being in the province of Canterbury; the Court of Arches, or Supreme Court of Appeal; the Prerogative, or Testamentary Court; and the Court of Peculiars: and in the province of York, the Prerogative or Testamentary Court, and the Chancery Court. 2. The Diocesan Courts, being the consistorial court of each diocese exercising general jurisdiction; the court or courts of one or more commissaries appointed by the bishop, in certain dioceses, to exercise general jurisdiction within prescribed limits. 3. The Courts of one or more Archdeacons, or their officials, exercising general or limited jurisdiction, according to the terms of their patents or to local custom. And, 4. There are also Peculiars of various descriptions in most dioceses, and in some they are very numerous—royal, archiepiscopal, episcopal, decanal, sub-decanal, prebendal, rectorial, and vicarial. These courts, indeed, are said to amount to 300. There are also some Manorial Courts.

The provincial courts of the Archbishop of Canterbury and the Archbishop of York are independent of each other; the process of one province not running into the other, but being sent, by a requisition, to the local authority for execution. An appeal from each provincial court lies to the King; who is empowered by 2 and 3 Will. IV., c. 22, to refer it to the judicial committee of the privy council, to hear and determine the matter in contest.

These courts are for the most part similarly constituted. A single judge presides in each. He is appointed by the archbishop, bishop, archdeacon, as the case may be, in whose court he presides. In a Peculiar he is not appointed by the individual having the jurisdiction. These courts are not courts of record.

Of the three principal Archiepiscopal Courts of Canterbury, the Court of Arches is the first. This court exercises the appellate jurisdiction from each of the diocesan and most of the Peculiar courts within the province. It may also take original cognisance of causes, by letters of request from each of those courts; and it has original jurisdiction on subtraction of legacies given by wills proved in the Prerogative Court of Canterbury.

The Prerogative Court has jurisdiction of all wills and administrations of personal property left by persons having *bona notabilia*, or effects of a certain value, in divers jurisdictions within the province. A very large proportion, not less than four-fifths of the whole contentious business, and a very much larger part of the uncontested, or, as it is termed, *common form business*, is despatched by this court. Its authority is necessary to the administration of the effects of all persons dying possessed of personal property to a specified amount within the province, whether leaving a will or dying intestate; and from the very great increase of personal property, arising from the public funds and the extension of the commercial capital of the country, the business of this jurisdiction, both as deciding upon all the contested rights, and as registering all instruments and proofs in respect of the succession to such property, is become of very high public importance.

The Court of Peculiars, which is the third archiepiscopal court of Canterbury, takes cognisance of all matters arising in certain deaneries: one of these deaneries is in the diocese of London, another in the diocese of Rochester, another in the diocese of Winchester, each comprising several parishes; and some others, over which the archbishop exercises ordinary jurisdiction, and which are exempt from, and independent of, the several bishops within whose dioceses they are locally situate. The province of Canterbury includes 22 dioceses, reckoning the diocese of Canterbury itself, where the ordinary episcopal jurisdiction is exercised by a commissary, in the same manner as in other dioceses.

The province of York includes four dioceses, besides that of Sodor and Man: and the archiepiscopal jurisdiction is exercised therein much in the same manner as in the province of Canterbury.

The diocesan courts take cognisance of all matters arising locally within their respective limits, with the exception of places subject to peculiar jurisdiction. They may decide all matters of spiritual discipline; they may suspend or deprive clergymen, declare marriages void, pronounce sentence of separation *à mensâ et thoro*, try the right of succession to personal property, and administer the other branches of ecclesiastical law. It is usual, however, in the country courts, to send up cases that arise by letters of request to the Court of Arches. The Archdeacon's Court is generally subordinate, with an appeal to the Bishop's Court; though, in some instances, it is independent and co-ordinate. The Archdeacon's Courts, and the various Peculiars already enumerated, in some instances take cognisance of all ecclesiastical matters arising within their own limits, though the jurisdiction of many of the Peculiar courts extends only to a single parish; the authority of some of them is limited to a part only of the matters usually the subject of ecclesiastical cognisance. Several of the Peculiars possess voluntary, but not contentious jurisdiction.

The ecclesiastical jurisdiction comprehends causes of a civil and temporal nature; some partaking both of a spiritual and civil character; and, lastly, some purely spiritual.

In the first class are testamentary causes; matrimonial causes for separation and for nullity of marriage, which are purely questions of

*civil* right between individuals in their lay character, and are neither spiritual nor affecting the church establishment.

The second class comprises causes of a *mixed* description, as suits for tithes, church rates, seats, and faculties.

The third class includes church discipline, and the correction of offences of a *spiritual* kind. They are proceeded upon in the way of *criminal* suits *pro salute animæ*, and for the lawful correction of manners. Among these are offences committed by the clergy themselves, such as neglect of duty, immoral conduct, advancing doctrines not conformable to the articles of the church, suffering dilapidations, and the like offences; also by laymen, such as brawling, laying violent hands, and other irreverent conduct in the church or churchyard, violating churchyards, neglecting to repair ecclesiastical buildings, incest, incontinence, defamation: all these are termed "causes of correction," except defamation, which is of an anomalous character. These offences are punished by monition, penance, excommunication, suspension *ab ingressu ecclesiæ*, suspension from office, and deprivation. All appeals from the Ecclesiastical Courts are now referred to the Judicial Committee of the Privy Council.

The ecclesiastical laws, as now existing, have been for upwards of three centuries administered, in the principal courts, by a body of men associated, as a distinct profession, for the practice of the civil and canon laws.

Some of the members of this body, in the year 1567, purchased the site upon which Doctors' Commons now stands; and, at their own expense, erected houses for the residence of the judges and advocates, and proper buildings for holding the ecclesiastical and admiralty courts, where they have ever since continued to be held. In the year 1768 a royal charter was obtained, by virtue of which the then members of the society, and their successors, were incorporated, under the name and title of "The College of Doctors of Law exercent in the Ecclesiastical and Admiralty Courts." This college consists of a President (the Dean of the Arches for the time being), and of those Doctors of Laws who have regularly taken that degree in either of the Universities of Oxford or Cambridge, and having been admitted advocates, in pursuance of the rescript of the Archbishop of Canterbury, have been elected fellows of the college, in the manner prescribed by the charter. According to the present constitution of the College of Doctors of Law, no person can be admitted a member, or allowed to practise as an advocate in the court at Doctors' Commons, without having first taken the degree of Doctor of Laws in one of the English universities. From the College of Advocates the archbishop always selects the judges of the archiepiscopal courts.

Proctors in these courts discharge duties similar to those of solicitors and attorneys in other courts. To entitle a person to be admitted a proctor, to practise in the Court of Arches, it is required that he shall have served a clerkship of seven years, under articles, with one of the 34 senior proctors. Before a clerk is permitted to be articulated, he is required to produce a certificate of his having made reasonable progress in classical learning. When the term of seven years is completed, the party is admitted a notary, by a faculty from the Archbishop

of Canterbury. The proctor so admitted is qualified to commence business upon his own account immediately ; but he is not entitled to take an articulated clerk, until he shall have been for five years within the number of the 34 senior proctors.

*The Court of Admiralty.*—The Court of Admiralty is held before the Lord High Admiral or his deputy, who is called judge of the court. When there was a Lord High Admiral, the judge of the Admiralty held his place most commonly by patent from him, and was called his lieutenant, as the vice-admirals of the several districts were called deputies. The judge now holds his place by direct commission from the Crown, under the great seal : to him appeals lie from the Vice-Admiralty Courts in the West Indies and other plantations and settlements. The Court of Admiralty is twofold ; the Instance Court, which takes cognisance of contracts made and injuries committed on the high seas ; and the Prize Court, which has jurisdiction over prizes taken in time of war. The commissions to hold these courts are perfectly distinct, though usually given to the same person. The Instance Court is governed by the civil law, the laws of Oleron, and the customs of the Admiralty modified by statute law.

The Prize Court is to hear and determine according to the course of the Admiralty and the law of nations.

From the Instance Court an appeal lies to the King, by whom it is referred to the judicial committee of the Privy Council. An appeal from the Prize Court also lies to the Privy Council.

The jurisdiction of the Admiralty as a criminal court, which it once possessed, seems now withdrawn, and given to the ordinary courts of common law ; and any offence committed on the high seas may, for the purpose of being tried in them, be alleged to have been committed in any county of England.

Besides these courts, which have a general jurisdiction throughout the kingdom, the Cinque Ports and some other places have courts of a limited jurisdiction of their own. The Vice-Admiralty Courts are confined to the colonies.

---

## CHAPTER V.—MUNICIPAL CORPORATIONS.

A CORPORATION generally is a collection of individuals united in one body by special act, either of the Crown or of the legislature, having the means of continued identity as such, with the capability of holding property and contracting liabilities in common ; and having further the right of suing and being sued in their joint name, of binding themselves by their common seal, and being considered in law for the purposes of its institution as a single person.

A municipal corporation, of which we now treat, is an aggregate body, established for the purposes of municipal government, within certain limits, usually those of a pre-existing borough, being, in fact, the successor appointed by charter, to exercise or enjoy the municipal franchises anciently vested by charter or prescription, in the burgesses or borough officers. Hence a short view of the history and constitu-

tion of boroughs is a proper, and, in some respects, necessary introduction to the subject of municipal corporations.

The word borough is most commonly derived from the Saxon *borg*, signifying an enclosure. Others, however, derive it from a Saxon word similar in sound to the former, signifying a *pledge*, applied to the associations for mutual responsibility required by the Saxon law; in which sense it is used in the words head-borough and free-borough. Apart from its derivation, the term has been, and still is, employed to signify a town of sufficient importance to have obtained, either by charter or by prescription, which implies a grant, a separate existence as a community; *i.e.*, having within itself, in a greater degree than the ordinary rural divisions, the power of self-government, and possessing, or being subject to, a special jurisdiction, whether constituted or not by its own appointment.

Communities of this sort must have arisen in this country, and, indeed, in every other, so soon as the distinction was well established between the agricultural and trading parts of the population. Our historical knowledge of them begins with the Romans, who introduced their municipal system into some of the larger towns of this kingdom, whether of Roman or British origin, such as York, Verulam, London, and Chester. These, however, were for the most part either destroyed or remodelled by the Saxons, who substituted in their stead their own burgh, the root, as well in constitution as in name, of the modern English borough. These again, particularly in the north and some of the midland counties, were subjected to great changes by the Danish invaders, who having laid waste many considerable towns, and dispersed their inhabitants, founded in their stead only five boroughs, *viz.* Derby, Nottingham, Leicester, Lincoln, and Stamford. The Danish population of these towns was in its turn dispersed by the Saxons, though traces were left in them, and in some others, of Danish innovations, the most remarkable being the substitution of an hereditary for an elective magistracy. Little, however, is to be found concerning the internal state of boroughs in the historical remains of the times preceding the Conquest; and though charters were granted to some boroughs by the later Saxon kings, Domesday Book is the first authentic record from which, with the aid of contemporary and subsequent documents, any coherent account of their general condition can be derived.

From these it would appear that under the name of boroughs, of which 82 are mentioned in Domesday Book, there existed, at the period of the Conquest, a variety of communities, differing greatly in extent of power and in their degree of dependence on the general government; being, however, upon the whole, sufficiently similar in their character and constitution to fall within the same general description. To speak, then, only of their common features, a borough, in these early times, was a community which supplied the neighbourhood with the common articles of manufacture or commerce, being endowed with the necessary franchise or license of holding a fair or market within its precincts, and with that degree of jurisdiction within itself which was requisite for the maintenance of internal tranquillity, and which, also, exempted it from the burthen of attendance upon the court of the hundred, and from the duties and liabilities incident to the other inha-

bitants of the hundred as such. This latter exemption seems to have constituted the distinguishing feature of a borough, for the franchise of a fair or market was common to boroughs with many other townships. Every borough took rank as a hundred, and had within itself the same court leet which belonged to all hundreds; that is, a court for the trial of petty offences and the presentment of nuisances. Such jurisdiction, though exercised for the convenience and with the assistance of the burgesses, was vested in the officer of the king, called portreeve or borough-reeve, or in the deputy of the lord of the leet, under the name of bailiff. In each case the fines and perquisites of the jurisdiction (which led to the administration of justice being considered as a property) belonged to the king or lord on whose behalf they were levied. In some boroughs, which, even in those early times, were of sufficient size to be subdivided into wards, the alderman of each ward exercised, in conjunction with the reeve, the jurisdiction of the leet.

A borough also was subject, as part of a manor, or as being itself a manor, to the baronial jurisdiction of the lord of the manor; and, if the borough comprised, wholly or in part, several manors, then to the jurisdiction of the lords of such several manors. But whatever privileges the inhabitants of boroughs might enjoy at and immediately after the Conquest, a municipal administration by magistrates of their own choice was not certainly included in the number.—(Hallam, *Middle Ages*, iii., 30.)

The incidents of tenure in borough lands were originally the same as in other lands; but, whether from the smallness of their subdivisions, or from the nature of the employments in which their occupiers were engaged, they escaped the imposition of military service, and burghage tenure retained, as stated in our law books, the character of the ancient tenure in common socage; that is, tenure by rent or service certain.

The revenue arising from a borough, and consequently the outgoings to which the burgesses were liable, consisted (as enumerated by Maddox in his treatise *Firma Burgi*) of the rent or custom payable for each tenement singly, and of that levied from the borough at large under the name of *gabel*; which is not to be confounded with the taxes occasionally imposed, the tolls of fairs and markets, the profits of aldermanries, and the fees and perquisites of courts. These were generally levied by a bailiff, acting on behalf of the king or other lord of the borough or franchise.

It has been justly stated by Mr. Hallam that the conversion of these individual tributes into a perpetual rent from the whole borough was not only one of the earliest, but also one of the most important, changes in the condition of the burgesses. The town was then said to be affirmed, or let in fee-farm to the burgesses and their successors for ever. Previously to such grant the town was a portion of the lord's demesne; but henceforth he only retained the superiority and inheritance of the annual rent.

From the time of William Rufus charters began to be granted to towns conveying various privileges, such as an exemption from tolls on rivers and at markets, an immunity from ordinary jurisdictions, a power of internal regulation, &c. Exemptions from certain rules of common law were also, in some cases, granted by these early charters,

as, for example, the right of devising property within the borough ; but it is proper to observe that the descent of land to the youngest son, to the exclusion of the elder, which prevails in certain boroughs, was not founded on charter, but on the peculiar custom called *Borough-English*. The civil jurisdiction exercised by municipal officers in a court of record originates from these early charters, and many extensions also of their criminal jurisdiction ; though it was not till the reign of Richard II. that a commission of the peace, and the right of holding general and petty sessions, were granted to any borough. A city differed from a borough only in being the seat of a bishop, who, in the Saxon times, possessed an extensive civil and criminal jurisdiction, and assisted the earl, or sometimes supplied his place, in presiding over the county court. Some cities, and even a few boroughs, were, from time to time, raised to the rank of counties ; that is, were in all points of jurisdiction, entirely exempted and made distinct from the county in which they were situated, and had within themselves a court in the nature of a county court, held by their own sheriffs.

There is reason to believe that all persons of free condition, possessing a tenement within the borough, residing within its limits, and contributing to its common charges, were originally (according at least to Saxon usage) entitled to be placed on the roll of burgesses at the court leet of the borough. But the disproportion between the number of houses and that of burgesses in the same places, as recorded in Domesday Book, is too great to allow us to suppose that such right was at that time generally acted on. It is probable that the right may have been impaired by neglect on one side, and usurpation on the other, considering that the advantages and burthens incident to burgesship may have been, in such boroughs as had little traffic, nearly balanced. The right may also have been, even at that early period, restricted, either to the tenants of houses within the ancient limits of the borough (which might be very different from its subsequent limits), or to the tenants of houses built upon the foundations of those possessed by the original burgesses, to whom and to whose *heirs* the franchise had been granted. It may also, not improbably, have been confined to the sons of burgesses. It appears, however, that free persons, residing or coming to reside within the borough (and villains having dwelt in the borough for a year and a day, unclaimed by their lords, stood upon the same footing), were frequently admitted, if not to the full burgesship, at any rate to a considerable share of the borough franchises, subject to the condition of inhabitancy and contribution to the common charges, and usually also upon payment of some fine.

The guilds, which early existed in most boroughs of any importance, consisted of associations of those carrying on different trades (similar in some respects to the colleges of workmen among the ancient Romans), formed for the purpose of watching over their common interests, and of managing their common property. The spirit of monopoly and exclusion gave strength and consistency to these institutions. Their members gradually acquired various privileges ; and having also, in certain matters, a separate jurisdiction exercised by their own officers in their own guildhalls, they generally succeeded, in no long time, in engrossing the privileges and jurisdiction that origi-

nally belonged to the burgesses at large; so that the borough itself was sometimes merged in the guild-merchant, or combination of the separate guilds. The substitution of the title of freeman for that of burgess, which took place in many boroughs, appears to have been a consequence of this change, and no doubt originated in the custom of admitting certain persons, either through apprenticeship or purchase, to the freedom of the guilds or subsidiary corporations. This is particularly seen in the city of London, where the rights of burgesses have long been in the exclusive possession of the liverymen or freemen of the different trading companies, though the old division into wards, and the mode of election according to wards, still subsists.

The freedom of the borough, being thus engrafted upon what were originally trading rights, whether belonging to the members of separate guilds, or to those of the guild merchant, was, like those prior rights, transmissible by descent, though with various modifications: thus the freedom in some places was confined to children born within the borough, in others, to those born since the acquisition of freedom by the father, while in others the right was restricted to the eldest son only. The acquisition of freedom by marriage with the daughter of a freeman, which was very commonly allowed, grew out of the right by descent.

The charters granted previously to the reign of Henry VI. rarely, if ever, intermeddled with the internal constitution of the boroughs. They were simply grants of the franchises previously noticed to the inhabitants and burgesses, and to their successors or heirs; leaving it to the grantees to settle among themselves the distribution and administration of these franchises. In consequence of thus leaving matters to their natural course, select, and, in many cases, self-elected bodies, under various shapes and designations, gradually assumed or usurped the administration, if not the exclusive enjoyment, of the immunities and property bestowed on the community.

The right of returning members to parliament, which was certainly exercised in the reign of Henry III., if not earlier, became also, in many cases, and with corresponding variations in the mode and extent of restriction, the subject of similar monopolies, the usurpation in this instance being effected with the greater ease, that the privilege was at first viewed with indifference or contempt. Seventy-five boroughs were originally summoned by Edward I., but he afterwards extended the franchise to thirty-three others.

Previously to the reign of Henry VI. boroughs virtually enjoyed the two distinctive privileges of a corporation, viz., the holding land in succession, and the right of suing and being sued in a common name; but, with the progress of jurisprudence, and the introduction of greater strictness in the discussion of legal rights, it probably became inconvenient to trust to usage and prescription for the enjoyment of such privileges. Hence the great, and, in some cases, the sole purport of the charters of this and the subsequent reign, was the constituting corporations, with the use of a common seal, enabling them to hold property in succession, and to sue and be sued in their corporate name. Such charters generally included the mayor, bailiffs, and burgesses, with the addition, in many cases, of the "inhabitants;" without speci-

fyng who were burgesses, or laying down any rules for the government of the borough or corporation ; save only, that they prescribed, as did the former charters, to whom the jurisdiction which they created or increased should be committed.

It was not till the time of the Tudors that it became usual to grant what are called governing charters, that is, charters regulating the internal constitution of the borough, or rather that of the corporation to which the borough at large was made subject in all points of municipal government.

The general object of these charters, more particularly of those that date from the reign of Henry VIII., was to recognise and sanction the exercise of the old borough and new corporate rights, by a small and for the most part self-elected body, whose numbers were in many cases limited by the terms of such charters. It is to this period, therefore, that we may refer the final establishment of that system of municipal government, of which the powers were usually vested in a mayor and common council ; the latter generally consisting of aldermen and common councilmen : the aldermen being taken from and nominated by the council ; while the common councilmen were either nominated by the whole council, or by the aldermen. The most important of the other corporate officers were the recorder or judge, the chamberlain or treasurer, and the town clerk or attorney of the corporation. These select bodies not only engrossed the municipal power, but the name and being of the corporation. The freemen and commonalty of burgesses ceased to be considered as members of the corporation, though they still retained their peculiar rights and exemptions, and possessed, in a greater or less degree, rights of election and eligibility to municipal offices.

This change vested in the new corporate body the common property of the borough, which, however, remained subject to any charges for the benefit of the burgesses or freemen which usage had established. Its amount was also in general small compared with what was acquired by the corporations after their distinct and separate existence had been finally acknowledged ; by far the greater part of the property vested in municipal corporations for their own use, or upon charitable trusts, having been acquired in the interval between the reign of Henry VII. and the Revolution, a period fertile in all sorts of charitable and corporate foundations. The right of making by-laws, and of taxing the inhabitants for the purposes of paving, lighting, and police, was also vested in the corporation by virtue of their new charters. But the most important, and, as it afterwards turned out, the most abused of the powers to which they succeeded, was that of admitting to the privileges of burgesses or freemen.

The modes of obtaining such admission in more ancient times have already been noticed. The governing corporations, which succeeded to the older municipal bodies, continued to recognise such claims to municipal rights as rested upon personal qualifications, such as birth and apprenticeship, and had been firmly established by local custom ; though in some places the condition of election was imposed upon persons so qualified, and in others a fine was exacted from them on admission. But the corporations, while they recognised more or less

fully these rights, assumed to themselves the discretionary power (which probably had been long growing up) of admitting to the freedom or burgesship such individuals as they chose, whether resident or not, and whether upon free gift or purchase; and this power was finally used to diminish or enlarge the number of freemen or burgesses, so as to secure the paramount influence of the corporation. In some places, indeed, particularly in those which had not been anciently boroughs, or had not possessed a merchant guild, or any separate guild, there were no burgesses or freemen exclusive of the corporation itself; and in others there were no means of acquiring the freedom except by election by the corporation; while, on the other hand, in some few places the municipal rights remained common to all inhabitant householders. Upon the whole, the general operation of the governing charters was not only to increase the power of the select few, but greatly to restrict the numbers of the commonalty of the borough; and there is, perhaps, reason to believe that the motive which induced the Crown to co-operate in such a course was to confine the parliamentary franchise within the same narrow limits as the municipal; or, at any rate, virtually to place it at the disposal of the governing body, which, it was hoped, would be more easily subject to the control either of the ministers of the Crown or of the great noblemen in the interest of the court. The belief in this motive is strengthened by the circumstance, that during the period to which we refer many insignificant places were raised to the rank of parliamentary boroughs; and it became usual for the nobles, whose feudal power had greatly declined, to connect themselves, under the name of high steward or by the office of recorder, with the boroughs in the neighbourhood of their possessions.

These attempts on the part of the sovereign to limit the right of election, at length arrested the public attention, and were successfully resisted by the House of Commons in the time of James I.; the celebrated Committee of Privileges, presided over by Serjeant Glanville, resolved, and the resolution was adopted by the House, that Crown charters, in as far as they modified the parliamentary franchise, were altogether void. Practically, however, the principle was only applied to such cases as were brought before the House upon petition; and even in these it left untouched such limitations or extensions of the elective rights, as usage had sanctioned. The parliamentary franchise was thus left (and remained till the Reform Act) a matter not so much of general law as of local custom; of which the following were the most remarkable varieties.

There was, first, the right by inhabitancy, which belonged either to all persons of full age habitually resident, or to all inhabitants procuring their own diet, who were called potwallers, i. e. pot boilers; or to all inhabitants paying "scot and lot" (of which the meaning in latter times has been held to be "the parochial rates"); or lastly, to all inhabitant householders, excluding, in each case, servants and lodgers.

There were next the rights by tenure, which belonged either to freeholders of property within the borough, in some instances of the value of 40s., and in others without any restriction as to value. Another species of franchise by tenure was that of the burgage holders; which is said by Blackstone to have existed in twenty-eight boroughs;

a burgage being for this purpose an undivided and undividable tenement, which has immemorially conferred upon its possessor, having a freehold interest in it, the right of voting. The third class of franchise is that depending upon personal qualification, which belonged generally to the governing corporate body, as it did in many cases exclusively; but more commonly to them in common with the burgesses or freemen, who were a part, or at any rate an offspring, of the corporation; or to the freemen of particular guilds not connected with the corporation, as was the case in the city of Wells.

Most of these franchises might, and several did often, co-exist in the same borough; while in other cases there was but a single species of franchise, created either by usage, or by successive decisions of the House of Commons, from the æra of Glanville down to the present day. From that time the municipal franchise of boroughs becomes very distinct from the parliamentary; the right of the Crown to modify by its charters the municipal franchise, which originally had proceeded from it, was not then called in question; nor were there in fact any parties interested to contest it; as those to whom restrictive charters were granted, had already succeeded in engrossing those rights and franchises which had been more vaguely conferred by older grants, and might therefore, not without some reasonable pretence, assume to surrender them. This scheme of narrowing the basis of the corporate constitution continued to be pursued by the Crown and corporate bodies jointly till the Revolution; at which epoch it had reached its height, being established, with few exceptions, and in different degrees of closeness, in every incorporated borough in the kingdom.

No particular event of great note in the history of corporations occurs subsequently to the reign of James I. till that of Charles II.; shortly after whose restoration were passed the Test and Corporation Acts, in the view of excluding from corporations the Presbyterian party, into whose hands they had mostly fallen during the Commonwealth. The latter part of the same reign is still more remarkable for the issuing of *quo warranto* writs; being an attempt on the part of the Crown to subject corporations to its control, by forcing them to surrender their charters and accept new ones, reserving the right to the Crown of nominating and removing the chief corporate officers. This attempt had already succeeded, in some few instances, in the earlier part of the same reign. The particulars of this struggle, or rather aggression, which was more liable to censure on constitutional than on legal grounds, belong to the general history of the country: it is sufficient here to say, that after a great majority of corporations of considerable towns had, either through fear of the Crown, or want of confidence in the integrity of the judges, or from less excusable motives, surrendered, or forfeited by non-appearance, their corporate existence, and had in many cases accepted such new charters as the Crown chose to confer, a proclamation was issued by James II., on the eve of his deposition, by which the new charters were recalled; the old ones, of which the surrender or forfeiture had not been legally completed, were revived, and such as had been cancelled were regranted. This proclamation, which was afterwards allowed to have the force of law, replaced the corporate system on its previous footing. It is, however,

worthy of remark, that some few places did not accept their old charters, but continued boroughs without a corporation; and these transactions are further important as having given rise to legal discussions, by which it has been established that a corporation may either surrender at its option, or forfeit by its misconduct, its franchise and its very existence.

During the period which elapsed from the Revolution to within these few years, little or no change took place in the municipal constitution of corporations: indeed, they appear but little in history in their municipal character; but their political importance, as rulers of boroughs, then rose to its greatest height, with the increase of the power and influence of the House of Commons. The connexion of boroughs and corporations with some powerful family residing, or having possessions in their vicinity, has been already noticed. In the period of which we now speak connexions of this sort had been so long established, and had become such that boroughs with a limited population, or in which the elective franchise was vested in a self-elected or close corporation, or in which the influence of the latter predominated, usually became the property of individuals who nominated their members, and even made them the subject of settlements and sales! In other places where the constitution of the corporation was more popular, or where the elective franchise without being widely diffused was yet too extensive to be under the control of the corporation, there frequently prevailed, in the election of members, an avowed system of bribery, or an all but open traffic in votes. No doubt there were various exceptions even among the inferior boroughs to these practices; and they were comparatively little known in the larger boroughs where there were large bodies of electors. But even in the latter, owing to the mode in which the freedom of the borough was usually acquired, large classes, comprising many of the wealthiest citizens, were excluded from the franchise; so that, speaking generally, the system of borough representation had become in the last degree corrupt and vicious.

We have already noticed the circumstances which led to the overthrow of this preposterous system. (*Ante*, p. 95.)

The Reform Act (2 & 3 Will. IV. c. 45) deprived fifty-six boroughs, the lowest on a joint scale of population and property, of the right of returning members, and one member only was left to thirty others; while, on the other hand, twenty-four of the most important unrepresented towns were endowed with two, and twenty others with one representative: and in all boroughs, the old as well as the new, the elective franchise was given to householders of the yearly value of 10*l.* and upwards, with the reservation in the old boroughs of the parliamentary rights of freemen, subject to the condition of residence; and with the further proviso, that none should for the future become freemen but by birth and servitude; but all rights of voting before acquired, in whatever way, were saved to their possessors, with the further condition of residence. The municipal constitution of boroughs was not touched by the Reform Act. In 1833, however, a commission was issued, in compliance with an Address of the House of Commons, to inquire into the state of the municipal corporations of England and

Wales. The commissioners to whom it was directed, presented a Report early in 1835, of which the following are the principal statements and results :—

That the borough franchises and property were, with few exceptions, vested in small, and for the most part self-elected corporate bodies, as previously stated.

That the freemen or free burgesses, where there existed such a class, were not usually considered as members of the corporation, though having in almost all boroughs, in a greater or less degree, certain rights of election and eligibility to corporate offices. That they were generally but a small, and often the least wealthy and independent part of the population of the borough; in proof of which it was stated that the aggregate population of sixteen of the most populous boroughs having corporations was 659,431, while the whole number of freemen was only 34,697; the proportion between the two numbers being nearly as that of 19 to 1; but allowance should be made in the larger number for domestics and women.

That the higher corporate officers were considered as a necessary part of the legislative body. That there were in all corporations inferior officers, whose functions had altogether ceased, but who nevertheless continued to be elected in compliance with the letter of their charters.

That the *jurisdiction*, arising as it did from particular charters, in which no general system had been followed, varied in many places inversely as the population and importance of the places in which it was established; being most extensive in many of the smaller boroughs and most restricted in some of the largest.

That the *property* of corporations consisted of lands, tithes, and other property of the same description. That they had also revenues arising from the tolls of markets and fairs, from duties on export and import of goods, usually called town dues; from quay dues and anchorage dues; from fees payable on admission of burgesses and officers, and from fines imposed for refusal to serve in corporate offices. That such property was not generally adequate to the fulfilment of municipal purposes; and that in some places a borough rate, in the nature of a county rate, was levied on the inhabitants to supply the deficiency. That in parliamentary boroughs, the municipal expenses had been in many instances, either wholly or in part, defrayed by their patrons. That since the passing of the Reform Act this assistance had been discontinued in such boroughs as had been disfranchised, and that some of them had, in consequence, ceased to maintain any municipal institutions. That the corporations had also in many cases property vested in them in trust for charitable purposes, and had, moreover, considerable patronage, both lay, as of schools and hospitals, and ecclesiastical, as of livings.

That the *freemen* had, in many cases, claims upon the property vested in the corporation, in the shape of rights of common, &c. &c., and were entitled, in some places, to pecuniary assistance upon certain occasions. That they were also generally entitled to exemptions from tolls and town dues, and had in some places exclusive rights of trading. That the freemen commonly, and in some places the inhabitants at large

also, claimed to be exempted from serving upon county juries, to which they would otherwise have been liable as freeholders of their respective counties.

With regard to the mode in which such powers, franchises, and property were exercised and administered, it appeared from the Report—

That the power of making *freemen*, so far as it was discretionary in the corporation, was chiefly exercised by them, and that the freedom also was commonly claimed for political purposes, as was shown by the great increase in the number of admissions, which generally took place on the approach of a general election.

That evil had arisen from the union of offices not properly compatible, as that of mayor with that of magistrate or that of coroner; and that in the appointment of corporate officers more regard was paid to party claims than to the capacity of those selected.

That improper and incompetent persons had been in many instances intrusted with the exercise of the corporate *jurisdiction*; and that, in consequence of this and other causes, such as the unwillingness of the corporation to undertake responsibility, the suspicion of partiality attaching to the juries selected from the freemen, the expensiveness of the proceedings in civil matters, and in criminal matters the bad state of the borough gaols acting upon the humane feelings of prosecutors, such jurisdiction had, in most places, excepting those in which it was exclusive, fallen into comparative disuse.

That in the disposal of their *property*, corporations did not, except in very few instances, recognise any obligation to apply it to public purposes, though in practice many corporations had undertaken works for the general benefit of the borough. That in most instances the property of the corporation was, to a greater or less extent, administered for the benefit of the members of the corporation and their families. That much of it was consumed in feasts or entertainments, or in extravagant salaries to the corporate officers; and that in some instances the corporate funds had been largely applied for electioneering purposes. That apart from any corrupt application, the expenditure of corporate funds had been very generally improvident; and that many corporations were considerably in debt. That the funds vested in corporations for charitable purposes had been very commonly misapplied and diverted to the use of the corporation; and that, in the selection of objects of charity or patronage, undue regard had been paid to the votes or political services of applicants; and that they had in other respects neglected the proper superintendence of the charities subject to their visitation.

That the corporations had very generally proved inadequate duly to fulfil such purposes of local government as police, paving, and lighting; and that the management of these matters was, in consequence, particularly in the larger towns, usually committed to distinct bodies appointed by Act of Parliament.

The commissioners concluded their Report by representing that the existing municipal corporations of England and Wales neither possessed nor deserved the confidence of his Majesty's subjects, and that a thorough reform must be effected in them before they became what they ought to be, and might be, useful and efficient instruments of local government.

Founding upon this Report, ministers introduced, in 1835, a Bill for the reform and remodelling of municipal corporations into the House of Commons, which, after much discussion and considerable alteration, was finally passed into a law, the 5th and 6th Will. IV. c. 76. By this Act, which embraces in its provisions 178 of the municipal corporations of England and Wales, the corporation in every place to which it applied was dissolved, and replaced by a municipal body consisting of mayor, aldermen, and burgesses, which was thenceforth to be the style of all municipal corporations, their constitution and government being regulated as follows:—

All who for three years have occupied a house or shop within the limits, and who, during that period, have habitually resided within seven miles of such limits, and have also during the same time been rated to the poor of some parish in the borough, are entitled to be placed on the list of burgesses. These elect the councillors, whose qualification for the office in boroughs divided into four or more wards is 1,000*l.* capital, or to be rated at 30*l.* annual value: in boroughs of inferior size, half these sums respectively. The number of councillors is fixed by the Act for each borough, and one-third of them go out of office every year. The councillors elect aldermen, whose number is one-third of that of the councillors, in conjunction with whom they compose the town council. Half the aldermen go out of office every third year: out of the aldermen the council elect the mayor, whose office is annual, with the capability of re-election, and whose business it is to preside over the council.

To this town council, composed of mayor, aldermen, and councillors, has been transferred the municipal powers and functions of the corporation which they have succeeded, curtailed in some respects, extended in others. The curtailment is chiefly as to the jurisdiction, which is no longer exercised by the officers of corporations, save by express delegation of the Crown. The King is empowered to issue his commission of the peace to 128 boroughs named in the Act, without any expression of a wish on their part, and to 50 others also named, upon their special petition. The King is also empowered to appoint, upon like petition from any borough, a police magistrate, with a salary to be first provided by the town council out of the borough funds, and farther to nominate a recorder in such boroughs as shall present a petition in that behalf, showing sufficient ground for the request, and stating the salary they are willing to pay; such recorder, who must be a barrister of five years' standing, to have the power of holding quarter sessions, in which he is to be sole judge, equal in extent of jurisdiction to the quarter sessions of a county.

The municipal functions of the new town councils are increased by the cessation of the powers conferred by local Acts for paving, lighting, and police; the latter power, which is committed to the hands of the mayor and a sufficient number of councillors, being subjected to the control of the Secretary of State for the Home Department.

In the town council also is vested the whole of the property of the old corporation, except tolls, which are abolished, to be administered by them, as well as any proceeds which may accrue from the corporate jurisdiction for the general purposes of the borough, and subject to the control and inspection of auditors appointed by the burgesses at large.

But the town councils were required to sell all advowsons, and to appoint trustees of all property held by them for charitable uses.

One only of the ancient franchises is left untouched: that is, the parliamentary rights of freemen or free burgesses, as retained by the Reform Act; and in addition to this, all rights of property and valuable exemptions are reserved to existing freemen, and all rights of property to all who shall hereafter become freemen by birth, marriage, or apprenticeship, though no longer entitled as such to any place in the municipal constitution. It was further provided that all officers of the old corporations, such as town clerks, bailiffs, treasurers, or chamberlains, discontinued by the new town council, should receive compensation, regard being had to the manner of their appointment, and their term or interest in their office.

By this Act a power is reserved to the Crown of granting charters to boroughs or towns not incorporated; and such power will doubtless, when occasion arises, be exercised in accordance with the system just described.

*Table specifying the Number of Boroughs first mentioned in each Reign as being in England, the Charters of Incorporation granted in each Reign, the Boroughs summoned to Parliament in each Reign, &c.*

|                                    | Number of Boroughs first mentioned in each Reign as being in England. | Charters of Incorporation granted in each Reign. | Boroughs summoned to Parliament in each Reign.                                                                                                                                                                                    | Number of Municipal Boroughs in each County according to first Table.                                                                                                                                                                                                                        |

Since the passing of that Act there are 187 Parliamentary Boroughs in England, and 13 principal Boroughs in Wales. | Somersetshire . . . 19<br>Stafford . . . . . 3<br>Suffolk . . . . . 4<br>Surrey . . . . . 8<br>Sussex . . . . . 11<br>Warwickshire . . . 3<br>Westmoreland . . . 1<br>Wiltshire . . . . . 21<br>Worcestershire . . . 8<br>Yorkshire . . . . . 20<br>Cinque Ports . . . 3<br>(omitted before) |

The above table is made up from those in Messrs. Merewether and Stephens' work on boroughs, and shows the successive growth of corporations and boroughs. But as many of the places to which it refers have fallen into decay, it is not applicable to their present condition; in regard to which more recent and accurate information may be found

in the Appendices to the Report of the Corporation Commissioners, whence it appears

|                                                                                                                         |      |
|-------------------------------------------------------------------------------------------------------------------------|------|
| That the number of municipal boroughs in England and Wales, concerning which they instituted any inquiry, was . . . . . | 285  |
| (Of which England had 231, and Wales 54.)                                                                               |      |
| Of these there were, in England, towns counties in themselves . . . . .                                                 | 17   |
| Ditto in Wales . . . . .                                                                                                | 2    |
| And of the whole there were, parliamentary and municipal, in                                                            |      |
| England . . . . .                                                                                                       | 137  |
| Ditto in Wales . . . . .                                                                                                | 41   |
| Municipal only in England . . . . .                                                                                     | 94   |
| Ditto in Wales . . . . .                                                                                                | 13   |
|                                                                                                                         | —285 |
| In addition to these 285 municipal boroughs, there were—                                                                |      |
| Boroughs that were parliamentary and not municipal, in England. . . . .                                                 | 53   |
| (Of which 22 existed before the Reform Bill.)                                                                           |      |
| Ditto in Wales . . . . .                                                                                                | 16   |

Of these 285, 39 are stated by the commissioners to have been municipal only in name: of the remaining 246, no accounts were received from 8, and 1 (London) was not included in the Report, leaving 237, of which the total population is stated to have been at the time 2,028,613. The aggregate property of 315 (there being in 17 no property, and 5 in which it could not be accurately stated) was, per annum, 366,948*l.* 10*s.* Of this sum, that of the boroughs on the northern circuit of the Commissioners amounted to 94,703*l.*, and that of those on the north-western to 100,704*l.*

## CHAPTER VI.—SKETCH OF THE HISTORY, CONSTITUTION, COURTS, ETC., OF SCOTLAND.

### SECT. I.—*Historical Sketch.*

THE early history of Scotland is at once obscure and uninteresting. The country was long one of the most barbarous in Europe; and though Kenneth II. (*anno* 838) is said to have united the extensive territories from the Tyne north to the Pentland Frith into one kingdom, it is abundantly certain that various extensive districts were in a great measure independent of the Crown for several centuries after this period. In consequence of their early holding Northumberland, Cumberland, and other lands in England, the kings of Scotland were accustomed to appear in the English court to perform homage for these possessions, in the same way as the English monarchs were themselves accustomed to perform homage to the kings of France for Normandy and the other provinces held by them in that kingdom.—(*Stuart's Public Law of Scotland*, note viii.) On the extinction of the direct line of the Scottish kings in 1290, by the death of Margaret of Norway, John Baliol and Robert Bruce, descendants of the Scottish king David I., appeared as competitors for the Crown. The pretensions of both were supported by powerful parties, and, to avoid a civil war, it was agreed to refer the matter to the amicable decision of Edward I., king of England. This able and politic prince availed himself of the opportunity to advance the principle, for which the homage that had been performed

by the Scotch princes for their English possessions afforded a colourable pretext, that the kings of England were the paramount sovereigns or liege lords of Scotland, and that the competitors for the Crown should do homage to him as such. This was consented to; and Edward, finding Baliol most suitable to his views, decided in his favour. The latter, however, being less subservient than was expected, was speedily set aside by Edward, who attempted to seize the kingdom on pretence of its having escheated to him through the rebellion of his vassal.

The nation, however, was not to be so transferred. Sir William Wallace raised the standard of independence; and in the sequel, the famous Robert Bruce, grandson of the competitor of Baliol, appeared in the field. Bruce, after unparalleled exertions, continued through a series of years, completely defeated Edward II. in the decisive battle of Bannockburn in 1314; and by that great victory secured the independence of Scotland, and established himself and his family on the throne.

The only daughter of Robert Bruce having married the Lord High Steward, Robert, the issue of that marriage, and the first of the family of Stuart who arrived at the royal dignity, succeeded to the Crown on the death of David II., in 1371. From this period the history of Scotland is comparatively well known; and the continued and extraordinary ill fortune that attended the lengthened series of princes of the House of Stuart has vested it with more than ordinary interest.

The principles of the reformers were early introduced into Scotland, and were eagerly adopted by the great bulk of the nobility and people. The Protestant religion obtained the ascendancy in 1560, shortly before the return of the beautiful but ill-fated Queen Mary from France, where she had been sent to be educated. At this period the royal authority was at a very low ebb; the most violent contentions prevailed amongst the nobility; and it would have required a sovereign of no ordinary ability and energy of character to conduct the government under such difficult circumstances. We need not, therefore, be surprised at the failure of Mary, who, though not without good talents, was wholly inexperienced, at the same time that she had the misfortune to have been strongly imbued with anti-Protestant prejudices, and that the violence of her passions made her sacrifice her own reputation and innocence, and the well-being of the kingdom, to their gratification.

Having been deposed in 1567, Mary was succeeded by her son, James VI., then a minor. The latter succeeded, on the demise of Queen Elizabeth, in 1603, to the Crown of England, when the two British kingdoms were happily united under one sovereign.

From the accession of the House of Stuart to the union of the crowns, a period of about 230 years, Scotland, speaking generally, was in a most unsettled turbulent state. The feudal system had been early introduced into the country; and the great estates and influence enjoyed by several of the nobles enabled them to rival the sovereign in power and importance, and sometimes to despise his orders and insult his person. In France, England, and other countries, the sovereigns, by enfranchising the inhabitants of the great towns, and attaching them to their interests, succeeded, through their assistance, after a lengthened struggle, in

abating the pride and independence of the barons, and reducing them to obedience. But the kings of Scotland had no such support on which to fall back: there was not a single great town in the kingdom; and they had nothing to trust to but the supplies of men and money they could draw from the Crown estates and from the contributions of such of their vassals as happened to be at the time in their interest, or which they could coerce. In consequence of these and other concurring causes, the power of the Scottish kings was circumscribed within the narrowest limits; the civil broils in which they were almost always engaged were, in most instances, fomented and abetted by the government of England; and, a few short intervals excepted, the country was involved in continuous anarchy and confusion.—(See the introductory chapter to Robertson, Wallace on *Peerages*, and the *Histories* of Pinkerton, Tytler, &c., *passim*.)

## SECT. 2.—*Constitution and Representative System of Scotland.*

The feudal system appears to have been early introduced into Scotland; and from the remotest period of which we have any authentic account, we find the superior power divided between the King and his Great Council or Parliament, which, as in England and other nations, appears to have been originally the feudal court of the sovereign. The feudal law of property has been preserved in Scotland; and there, also, the principle that none but the immediate vassals of the Crown should be entitled to appear, either directly or by representatives, in the meetings of the estates, or in parliament, has been enforced down to our own times.

The freeholders, or tenants *in capite* of the Crown, comprising the greater and lesser barons, were bound personally to attend the meetings of parliament in the 14th, 15th, and 16th centuries. By the greater barons were meant those who had the largest estates, several of whom

were distinguished by honours and titles; while by the lesser barons were meant the proprietors of the smaller class of estates, provincially called *lairds*. But as it would have been an obvious hardship to compel the owners of inconsiderable freeholds to attend in parliament, an Act, passed in 1458, excused those who held of the Crown for less than 20*l.* a-year from personal attendance; and in 1504 the exemption was carried still further.

Baronies in Scotland correspond with manorial lordships in England, all freehold properties of a certain amount being baronies, whether their owners are ennobled or not. It is, however, material to observe, that the greater had no privileges of any kind not enjoyed by the smaller barons; they were, in all respects, peers or *pares*. Down to a comparatively late period, every landed gentleman holding of the Crown might sit and vote in parliament; but he could not be constrained to attend unless his estate amounted to a certain sum.—(*Pinkerton's Hist. Scotland*, i. 358.)

*Representative System.*—The right to appear by representatives in the Scotch parliament was first granted to the burgesses of the Royal boroughs, a class of Crown vassals who could only be admitted by deputies. The date of the admission of the latter is not well ascertained. They are first distinctly mentioned as having been present at a parliament held at Cambuskenneth in 1326, in the reign of Robert I. (BRUCE); but it has been supposed that they had attended some earlier parliaments.\* It was not, however, till the reigns of James I. and James II. that representatives for boroughs began to be regularly present as constituent members of the estates.

In Scotland, attendance on parliament in ancient times was reckoned still more burdensome than in England; and, except on extraordinary occasions, the lesser barons, though bound to attend, were rarely present at its meetings. James I., having been long in England, was acquainted with the representative system established in that kingdom; and being desirous to introduce it into his dominions, he had a statute passed in 1427, which permitted the lesser barons to absent themselves from the meetings of the estates, on condition of their sending two or more representatives from each shire, according to its magnitude. But this alternative was hardly ever resorted to, and as the freeholders continued, in consequence, liable to personal attendance, it was judged necessary, as already seen, to exempt those having inconsiderable properties from this obligation. In those days, however, neither penalties nor entreaties were effectual to enforce the appearance even of the more important of the lesser barons. During the reign of James III. their attendance, when greatest, never amounted to 30, while it was frequently much less; and parliaments were repeatedly held in the reigns of James IV. and James V., at which not one of the smaller barons was present.† But when the kingdom began to be agitated by religious disputes, this apathy on the part of the lesser barons or gentry began to diminish; and in the reigns of Mary and her son they frequently attended parliament in large numbers. This, however, was in various

\* Abercromby, *Achievements*, i. 635; Robertson, i. 282, 8vo. ed.; Wight, on the *Parliament of Scotland*, p. 45; Pinkerton, i. 350, &c.

† Wight, on the *Rise and Progress of Parliament in Scotland*, p. 58, ed. 1784.

respects inconvenient, and was especially disagreeable to the Crown and the nobility. In consequence, an Act was passed in 1587, making it imperative on the freeholders to send two representatives, of good rent and fair character, for each county, (excepting Clackmannan and Kinross, which sent one each,) whose charges they were bound to defray.\* These were fixed, in 1641, at 5*l.* Scotch, or 8*s.* 4*d.* sterling per diem, during the sitting of parliament; to which period a certain number of days were added for the expenses of members in going to and returning from its meetings. Freeholders were not expressly excluded from personal attendance by the Act of 1587; but they never were present after its passing except as representatives.—(*Wight on Parliament*, p. 60.)

In the interval between the rise of the Reformation and the Revolution, the spiritual estate in Scotland was exposed to many vicissitudes. The Presbyterians did not require that their clergy should be represented in the national councils; and as often as they gained the ascendancy, prelates were excluded. These, however, were uniformly restored to their seats in parliament when the episcopal party predominated; and as they were mainly indebted for their existence and influence to the Crown, they were, at all times, the most slavish of its dependents, and its ready and willing instruments in every unconstitutional and despotical proceeding.

Hence it appears that subsequently to 1587, the parliament of Scotland consisted of the nobility and of the representatives (the smaller barons) of shires and boroughs, with sometimes an infusion of prelates. Independently, however, of the occasional exclusion of the latter, the Scotch differed in some important respects from the English parliament. In the *first* place, the Peers were not separated from the Commons, the Parliament forming but one chamber. This mixing up of the two estates in one deliberative body does not seem to have been remonstrated against, and continued as long as parliament existed: *secondly*, some of the principal officers of state sat and voted in Parliament in virtue of their office. The origin of this practice, which was calculated to give an overpowering influence to the Crown, has not been exactly ascertained, but it was regulated by an Act passed in 1617, which limited the number of the officers of state who, as such, were members of parliament, to *eight*, viz., the High Treasurer, the Treasurer Depute, the Secretary of State, the Keeper of the Privy Seal, the Master of Requests, the Clerk Register, the Justice Clerk, and the King's Advocate. When any of the offices held by these functionaries was put in commission, the King named one of the commissioners who, in consequence, became a lord of parliament. An Act of 1633 ratified this statute, and recognised the Lord Chancellor as President of the House. It may, in the *third* place, be noticed, as a peculiarity of the Scotch constitution, that the Commons never acquired the right of determining by themselves on the supplies, though the English Commons had early established this right in their representatives.

But the distinguishing feature of the Scotch parliament, and which latterly made it little better than a passive instrument in the hands of

\* See *Wallace, on Ancient Peerages*, 2nd ed., pp. 285-294; one of the best works on the constitutional history of Scotland.

the monarch, was the famous committee, known by the name of the *Lords of the Articles*. It consisted of a select number of members of parliament, to which all matters to be brought before the latter had, in the first instance, to be referred, and which had power to reject such as it disapproved of, and to modify and alter the others in any way it thought proper. This committee had, therefore, a negative before debate; and the whole duty of parliament was confined to meeting to choose the Lords of the Articles, and then, when the work of the latter was over, it reassembled, for a day or two, to confirm or reject their proceedings.

This institution, of which the origin is uncertain, may probably be traced to the year 1367, in the reign of David II. It appears to have been intended to facilitate and improve the business of legislation, which was likely to be better attended to by a committee of experienced persons than by an assembly of unlettered feudal chieftains, strangers to and impatient of such subjects. Originally it seems to have consisted of an equal number of members chosen from each estate, and so long as these were fairly selected, the presumption seems to be that it would be advantageous. But in the course of the struggles between the Crown and the barons and people, the importance of being able to determine the election of the Lords of the Articles became obvious; and the power of doing this was in the end acquired by the Crown. The nomination of these Lords was, probably, in its hands previously to the reign of Mary, and was exercised to the fullest extent by her son. Occasionally, indeed, the Royal nomination encountered some ineffectual opposition; but it was fully conceded at the Restoration, and continued down to the Revolution. The Crown did not, however, directly nominate the members of the Committee, the usual plan being to devolve this task on the bishops, on whom it could depend, who chose eight noblemen, and these again eight bishops; and the sixteen so chosen nominated eight members for shires and eight burgesses; and even then the Committee was not complete till the King added to it the officers of State, who, in truth, directed all its proceedings.\*

The Lords of the Articles were abolished by the Convention Parliament in 1690. The statute for that purpose recognised the right of the House to appoint Committees for the dispatch of business; these were to consist of an equal number of members chosen by each estate, that is, by the nobility, the barons (commissioners of shires), and the burgesses. The officers of State who sat in Parliament might attend these Committees, but they had no vote.

The powers assumed by the Scotch parliament fluctuated according to the times; but, in its earlier periods, we find it interfering to what seems an unusual extent with the royal prerogative. It is affirmed that, by the older constitution of Scotland, the king neither possessed a *veto*, nor the power of making peace or war without consent of Parliament. As to the latter, it mattered little whether it were recognized theoretically or not, so long as the Crown had no standing army;

\* For further information as to the Lords of the Articles, see *Robertson's Scotland*, book i.; the note No 29 in the work of Dr. Gilbert Stuart on the *Public Law of Scotland*; *Wallace on Peerages*, 2nd ed., pp. 342-348; *Wight on the Parliament of Scotland*, pp. 85-98, &c.

and in Scotland there was none till 1662. The assertion that the king was bound to ratify, by touch of the sceptre, all Acts which Parliament brought to him, is admitted by James VI, in a speech to the English Commons, in which he congratulates himself that his command of the Lords of the Articles made the limitation quite nominal. Parliament took advantage of the difficulties in which Charles I. was placed, to extort from him, in one of his parliaments, an insincere acquiescence in this restriction. But after the Restoration neither the one right, nor the other, was ever claimed by parliament, and the questions were not again seriously revived.

The accession of the House of Stuart to the English throne, had a great, and in some respects a sinister, influence over public affairs in Scotland. The barons could no longer look to England for open or underhand support in their contests with their sovereigns; while, at the same time, the power of the latter was vastly increased by their being able to employ the resources of a far more civilized, populous, and powerful monarchy, in their disputes with their ancient subjects. The Scottish parliament, which consisted almost wholly of nobles and their nominees, was very ill-fitted to contend with this increased influence on the part of the Crown. During the melancholy period between the Restoration and the Revolution, when the Crown endeavoured, by the most atrocious persecution, to extirpate that Presbyterianism to which the people were enthusiastically attached, parliament seldom manifested any inclination to oppose its most violent and most unconstitutional measures; and slavishly permitted without a struggle, every restraint on the prerogative, and every safeguard for the liberty of the subject, to be swept off. It may safely be affirmed that Scotland was then subject to the very worst of governments, administered by the very worst of men.

The different constitution of the English and Scotch parliaments accounts, in some degree, for the great power which the Commons early attained in the former, and for the little power which they ever attained in the latter. But more stress has, notwithstanding, been laid on this difference of constitution than it deserves. The Commons of Scotland had little power or consideration in Parliament, because they had little wealth and consideration in the country. The towns were quite inconsiderable; and were destitute of anything worthy of the name of trade and manufacture. The land, the only species of property in the country, was almost entirely engrossed by the nobility, or by their connections and dependents, and continued to be so till long after the Union. In consequence, the knights of the shire were merely their nominees; and the representatives sent by the boroughs were too poor and inconsiderable to make any effectual opposition to the Crown or the nobility, whose influence, indeed, preponderated nearly as much in the towns as in the country. In England, the state of things was widely different. At an early period she possessed many large towns, with extensive manufactures and trade. The Commons, in consequence, became wealthy, and purchased large landed property, which after the passing of the statute of *Quia Emptores*, they held not, as in Scotland, of the alienor, but directly of the Crown. Hence the real cause of the decline of the power of the feudal nobility, and of the rise of that of

the Commons in England; and hence, also, the different political system, and the different distribution of power that obtained there and in Scotland.

The extent to which the proceedings of parliament and of the administration, had disgusted the nation, became evident on the landing of our great deliverer William III. With the exception of the friends of prelacy, popery, and arbitrary power, who luckily formed but a small minority, all classes rose against James; and the Revolution was effected with as much ease in Scotland as in England. Having briefly recapitulated some of the more offensive and odious measures of his reign, the estates went on to declare by a decisive vote, "That James VII., being a professed Papist, did assume the royal power, and acted as king, without ever taking the oath required by law; and had, by the advice of wicked and evil councillors, invaded the fundamental constitution of the kingdom, and altered it from a legal limited monarchy, to an arbitrary despotic power; and hath exerted the same to the subversion of the Protestant religion, and the violation of the laws and liberties of the kingdom; whereby he hath forfeited (forfeited) his right to the crown, and the throne has become vacant."

The vacant throne was filled by William and Mary. The principal abuses that had characterized the government of the two preceding reigns, were also enumerated and digested into an instrument, called a Declaration and Claim of Rights, presented and assented to, by the new sovereigns. Among other articles, this instrument declared prelacy and precedence in ecclesiastical office, to be repugnant to the genius of the nation, and an intolerable grievance; it affirmed that no Papist could ascend the throne; and denounced as illegal and unconstitutional, the methods resorted to by the late government, in the seizure, imprisonment, and condemnation of individuals. A separate list of grievances was also framed, in order to their being corrected in parliament. In this list the estates denounced the committee of articles; the keeping up of a standing army in time of peace, without the consent of parliament; the act of supremacy, the manner and measure of the popular representation, &c.

In consequence of the public attention being thus directed to the subject, the number of representatives to be sent by the Commons to parliament, was increased by an Act passed in 1690; but this Act did not effect any real reform, for it did not widen the basis of the representative system, which, (as will immediately be seen,) continued to be, as it had previously been, narrow and anti-popular, in a degree not easily to be imagined. Under the Act of 1690, the counties returned 92 knights of the shire, and the boroughs 67 burgesses.

The disputes that might otherwise have arisen in regard to the succession to the crown on the demise of Anne, made a legislative union with England most desirable. It was carried with difficulty through the Scotch parliament; promises, threats, and bribes, being liberally employed to ensure its success. Its unpopularity, at the time, in Scotland, was excessive; and it was sincerely deplored by Fletcher, of Saltoun, Lord Belhaven, and the best Scotch patriots. But their regrets were occasioned rather by the sacrifice of national independence, which it involved, than by any other feeling; for, in every point of

view but this, the union was most beneficial. "The loss of a corrupt and factious parliament, was the greatest blessing which Scotland could obtain;"\* and was indispensable, indeed, as a preliminary step, to the introduction of anything like an improved system of government.

The Act of Union took effect on the 1st of May, 1707. Amongst others it contained the following stipulations:—A union of England and Scotland into one kingdom, with one parliament, and a full freedom of trade to the subjects of the one country, in the colonies and dominions of the other; the complete uniformity of customs and excise; the fixing of the proportion of land-tax, payable by Scotland, at 48,000*l.*, for every 2,000,000*l.* to be levied in England; the payment of 398,000*l.* to Scotland, as an equivalent for that part of the augmented customs and excise which should be applicable towards payment of the public debt of England; the equivalent to be applied, in the first instance, to the discharge of the public debt of Scotland; a uniformity of public law in the two kingdoms; reserving the Scotch judicatures and private law, the hereditary jurisdictions, the rights of the royal boroughs, and the rank and precedence of the Scotch peers: and, finally, the establishment of Presbyterianism as the national form of church government in Scotland. The Crown was to have the power of retaining a privy council for Scotland; but the Scottish privy council was immediately abolished; the hereditary jurisdictions were, also, abolished in 1748, on compensation being made to the owners.

The number of representatives to be granted to Scotland, in the united parliament, formed a difficult question. At the outset the English commissioners proposed that Scotland should send 13 peers and 88 commoners; but in the end it was decided that Scotland should be represented in the House of Lords by 16 peers, and in the Commons by 45 members. It is needless now to inquire whether this were a fair proportion. It was, at the time, all but universally objected to in Scotland; but looking at the then state of the two countries, at the wealth and civilization of England, and the poverty and barbarism of Scotland, it does not appear that the complaints of the latter of having too small a share in the representation of Great Britain, had any good foundation.†

Since the Union the Scotch representative peers, like the members of the House of Commons, hold their seats for one parliament only, being elected by their own order, who may vote by proxy. Of the 45 members of the House of Commons, 30 were assigned to the shires, and 15 to the boroughs. Twenty-seven counties had each one member; the remaining six electing members for alternate parliaments. Of the borough representatives, Edinburgh had one; the other 65 boroughs were divided into 14 districts, each of which chose a member; for this purpose each borough chose a commissioner; and the commissioners for each district having met, chose the member by a majority of votes; each borough having, in its turn, a casting vote, in case of an equality of votes among the commissioners. In this situation matters remained till 1832.

\* Laing's History of Scotland, iv. 396,

† In the union of the three kingdoms projected by Cromwell, England and Wales were to return 400 members, and Scotland and Ireland 30 each.

Of the 154 noblemen who stood on the roll of Scotch peers at the Union, only five possessed British peerages. The number of Scotch peers is now about 80, of whom about a third part are also British peers, and as such sit in the House of Lords, retaining at the same time their right of voting for Scotch peers.

It was determined by an Act passed in the last Scottish parliament, 1707, c. 8, that the elective system under which members had previously been returned to the parliament of Scotland, should be preserved and acted upon in returning members to the parliament of Great Britain. This system was briefly as follows :—

1st. *Of the Shires.*—We have seen that the electors of members for shires in the Scotch parliament were the king's freeholders. Their qualification was put by an Act of 1681, c. 21, on the footing on which it continued down to the Reform Act. An elector was required to be seised, and in possession of "a forty shilling land of old extent," or of "lands liable in public burden for his Majesty's supplies, for 400*l.* (Scotch) of valued rent." The "old extent" was a valuation of uncertain date, but, at least, as old as the fifteenth century.\* The "valued rent" was the rent set down in a general valuation, made about the middle of the seventeenth century. But the lands, forming the qualification, were to be "holden of the king;" and for understanding this condition, and the use which was made of it, it may be necessary to state, that in Scotland the feudal system of holding lands prevails universally. Every foot of ground is, in law, held to belong to the king, and is possessed by the subject under a charter from the crown. But the vassal who holds the crown charter may create sub-vassals under himself, who possess his lands, or parts of them, under such lawful conditions of yearly payment or services as he may choose to impose. When the possession of a vote for a county became a desirable object, advantage was taken of the law to separate the franchise from the real property of the lands. Thus, if a landed proprietor wished to sell his estate, but to retain his franchise, he granted a charter accepting the purchaser as his vassal in the lands; the duties imposed on the latter, being in most instances quite nominal, such as the twelfth part of a penny a year, "if asked only." But the more common case was for the proprietor of a large estate, the valuation of which would afford several qualifications, to create voters upon it in the persons of his friends or dependents. The method of doing this was by a somewhat complicated manufacture of charters; the result being, that at the next meeting of freeholders, each of the new voters claimed enrolment on producing a crown charter, in his favour, over a portion of the lands, and a certificate from the commissioners of supply, that this portion was entered in the public tax-books, for an amount of land-tax entitling the possessor to a vote. The real owner became for the portions of his estate so alienated, the vassal of the new freeholders, under

\* The term "old extent" was applied to several successive valuations. There was an "old extent" anterior to the reign of King Alexander II.; another in that reign; another in the reign of King James I., and another in that of his successor; though this last was, perhaps, not of the whole kingdom, as the others, but of the southern counties only.

a nominal duty, retaining a crown charter for the rest of his lands. These fictitious votes, or "superiorities," as they were called, soon became matter of traffic, bearing a different price in each county, and varying in their value in the same county, according to the state of politics at the time of sale, being sometimes worth not less than 2,000*l.* Feuars or copyholders, tenants, house and mill-owners, manufacturers and merchants, and all other descriptions of persons, how rich and respectable soever, were excluded from the franchise. This was monopolised by a handful of landed proprietors, and their creatures and dependents. So strict and exclusive was the system, that at its abolition in 1832, the total number of freeholders, or of voters for counties, in Scotland, did not exceed 3,200! Of these from 500 to 600 possessed freeholds in more than one county; and about half these freeholders possessed merely the superiority—the parchment franchise—without having any right to an acre of the ground, or to a penny of the rent of the lands for which they were enrolled! The greatest number of voters in the most populous county, did not exceed 260; and one county which returned a member had only 23 voters! At an average the counties had a constituency of 97 each!

The older statutes differed upon the subject; but since the Union it has been held that the only qualification for a Scotch member, supposing him to be free from the statutory personal disqualifications, is that he should be on the roll of the county as a freeholder. By the practice of Scotland, previously to the Union, the eldest sons of peers could not represent counties or boroughs in the Scotch parliament; and they were afterwards refused admission to the roll of freeholders, and consequently had no vote.

2nd. *Of the Electors for Boroughs.*—These were placed on a simpler, and (though that may seem difficult) even less satisfactory, footing, than those for counties. The nomination of the borough representatives appears to have always been in the hands of the magistracy of the boroughs, and it was not unusual for the chief magistrate of a borough to represent it in parliament. Had the magistrates been themselves popularly elected, this system might not have been very objectionable; but instead of this they were, for some centuries, down to the passing of the Scotch Borough Reform Act in 1833, completely *self-elected*. The principle of self-election was introduced by an Act of James I. in 1469, which, on pretence of obviating disorders, which, it was alleged, were occasioned by the choosing of the magistrates, directed that the old councils of the different towns should in future elect the new! It is needless to dwell upon the preposterous absurdity of such a system. Even after many of the towns had become populous and wealthy, it frequently happened that a junto having got an ascendancy in the council, perpetuated themselves and their powers, and continued for years to engross every situation in the magistracy, and to vote in the return of the representative to the House of Commons without having any influence whatever in the town, and sometimes, indeed, when they were detested by the bulk of the inhabitants. But by far the greater number of the town councils were the mere creatures of some considerable family in the vicinity, by whom, indeed,

they were usually nominated. Hence, as already stated, the representation of the towns was as bad and unpopular as that of the counties, or, if possible, worse.

Even if the constituency of the boroughs had been as extensive as it was limited and oligarchical, the increase of some towns and the decline of others would have rendered the old system of voting inapplicable and absurd. With the exception of Edinburgh, which returned one representative elected by the town council consisting of *thirty-three* individuals the other parliamentary boroughs were, as already seen, distributed into groups or districts, each of the associated boroughs having a vote in the election of their joint representative. And under this system the city of Glasgow (now represented by two members), which in industry, wealth, and population, is hardly inferior to any town in the kingdom, the metropolis excepted, was associated with the inconsiderable boroughs of Dunbarton, Rutherglen, and Renfrew, every one of which had an equal share in the election of the common representative! In like manner the votes of Aberdeen, Dundee, and Perth, were countervailed by those of their insignificant associates; and the great towns of Paisley and Greenock were not even admitted to any share, how small soever, in the choice of representatives.

It is obvious, therefore, that the representative system, if so we may call it, established in Scotland previously to the Reform Act, was neither more nor less than a burlesque of all principle, and an insult to the public and to common sense. "When we look," said Mr. Fox, "to the kingdom of Scotland, we see a state of representation so monstrous and absurd, so ridiculous and revolting, that it is good for nothing except, perhaps, to be placed by the side of the English, to set off the defective points of our system by the comparison of one incomparably more defective. In Scotland there is neither a representation of property for the counties, nor of population for the towns. It might so happen that all the members for Scotland might come here without having the vote of a single person who had a foot of land. In the boroughs the magistrates are self-elected, and as they elect the members the latter have nothing to do with the population of the towns." (*Speech in the House of Commons, 26th May, 1797.*)

The fact is, notwithstanding all that has been alleged to the contrary, that down to 1832 Scotland had the shadow merely without the substance, the disadvantages without any part of the advantages, of a representative government. Whatever of freedom or of good government she enjoyed from the Union to the Reform Act, was wholly owing to her liberal form of church government, which kept alive ideas of independence in the minds of the people; to her system of parochial education; and most of all to her association with England; to the power of petitioning the parliament of the United Kingdom; and to the appeal in civil cases from the Court of Session to the House of Lords.

The Scotch Reform Act, or Act to amend the Representation of the People in Scotland, received the royal assent on the 17th of July, 1832. Its leading provisions are as follows:—

1. Scotland is represented in the House of Commons by fifty-three

members; of whom thirty are for the shires, and twenty-three for the cities, boroughs, and towns.

2. No disfranchisement took place, except in the case of the boroughs of Peebles, Selkirk, and Rothsay. Such of their inhabitants as are qualified as county electors, have votes in the counties in which they are situated.

3. The thirty-three counties are classed in two schedules: those in the first schedule, twenty-seven in number, return one member each; those in the second, six in number, are joined in pairs, each of which returns one member. The shires returning one member are, Aberdeen, Argyle, Ayr, Banff, Bute, Berwick, Caithness, Dumbarton, Dumfries, Edinburgh, Fife, Forfar, Haddington, Inverness, Kincardine, Kirkcudbright, Lanark, Linlithgow, Orkney with Shetland, Peebles, Perth, Renfrew, Roxburgh, Selkirk, Stirling, Sutherland, and Wigtown. The combined counties, each pair returning a member, are, Elgin and Nairn, Ross and Cromarty, and Clackmannan and Kinross.

4. The constituency of the shires is of two kinds, Proprietors and Tenants.

*Proprietors.*—1. All persons who, at the time of the passing of the Act, were on the old roll of freeholders of any shire, or who, previously to the 1st of March, 1831, had acquired a qualification entitling them to be enrolled. The right of voting so reserved to the former electors, is personal to them, and cannot be perpetuated or transferred to others.

2. Every person who is the owner of lands, houses, or other fixed property (except debts heritably secured) within the county, if the same shall be of the yearly value of 10*l*. Any annual duty, or other annual consideration, which the claimant may be bound to pay for his right, must be deducted in valuing the property; and the voter must, (1.) be in possession of the property by himself or servants, tenants, &c.; and, (2.) he must have been the owner of such property for not less than six calendar months previously to the last day of July in the year in which he claims enrolment; unless he have acquired it by inheritance, marriage, or *mortis causa* deed, or by appointment to any place or office; in which cases, six months' possession is not required. Joint owners may vote, provided each has an annual interest amounting to 10*l*.

*Tenants.*—1. Every tenant in lands, houses, or other fixed property, under any lease or other written title, for (1.) a period of not less than fifty-seven years certain, or for his lifetime, provided the yearly value of the tenant's interest, after paying the rent, be not less than 10*l*.; or (2.) for a period of not less than nineteen years, where the yearly value of his interest is not less than 50*l*. A tenant of these descriptions need not be in the personal possession of the premises; but he must have held them under his lease for twelve months, previously to the last day of July in the year when he claims enrolment; unless he have acquired them by inheritance, or the other means specified above in the case of owners.

2. Tenants of lands, houses, &c., where the yearly rent is not less

than 50*l.*; or where, whatever the rent may be, the tenant has truly paid for his interest not less than 300*l.* These tenants must have been in the actual personal possession of the lands, &c., for twelve calendar months previously to the last day of July in the year wherein the claim of enrolment is made. Sub-tenants or assignees to the leases specified in the article immediately preceding (10*l.* for fifty-seven years, or 50*l.* for nineteen years) can also vote, provided they have had twelve months' personal possession.

5. The cities, boroughs, and towns, seventy-six in number, are divided into three classes: (A.) To return two members each;—Edinburgh and Glasgow. (B.) To return one member each;—Aberdeen, Paisley, Dundee, Greenock, and Perth. (C.) Combined burghs and towns, each set or district jointly to return one member:—1. Kirkwall, Wick, Dornoch, Dingwall, Tain, and Cromarty;—2. Fortrose, Inverness, Nairn, and Forres;—3. Elgin, Cullen, Banff, Inverury, Kintore, and Peterhead;—4. Inverbervie, Montrose, Arbroath, Brechin, and Forfar;—5. Cupar, St. Andrew's, Anstruther E., Anstruther W., Crail, Kilrenny, and Pittenweem;—6. Dysart, Kirkcaldy, Kinghorn, and Burntisland;—7. Inverkeithing, Dumfermline, Queensferry, Culross, and Stirling;—8. Renfrew, Rutherglen, Dunbarton, Kilmarnock, and Port-Glasgow;—9. Haddington, Dunbar, North Berwick, Lauder, and Jedburgh;—10. Leith, Portobello, and Musselburgh;—11. Linlithgow, Lanark, Falkirk, Airdrie, and Hamilton;—12. Ayr, Irvine, Campbeltown, Inverary, and Oban;—13. Dumfries, Sanquhar, Annan, Lochmaben, and Kirkcudbright;—14. Wigtown, New Galloway, Stranraer, and Whithorn.

6. The voters for boroughs are qualified either by occupancy or ownership. Occupancy or possession is not necessarily personal, but may take place by servants or others: occupancy is thus different from residence.

*Occupancy*.—1. All persons occupying as proprietor, tenant, or life-renter, any house, warehouse, or other building within the bounds of the borough which, either separately or jointly with any other house or other building within the same limits (also occupied by him), shall be of the yearly value of not less than 10*l.* Or, 2. Persons occupying premises as above, which, with any *land* owned and occupied by the same person, or occupied under the landlord to whom the house, warehouse, &c., belongs, and also situated within the same limits, are of the clear yearly value of not less than 10*l.* The occupants must (1.) have been in occupancy of premises of the necessary description and value for twelve calendar months before the end of July; (2.) have resided six calendar months, previously to the end of July, within the borough, or within seven statute miles of it; (3.) have paid, before the 20th of July, all assessed taxes due for the premises previously to 6th April; and (4.) they shall not have received parochial relief within twelve calendar months previously to the end of July. Joint occupiers have right where the premises are of sufficient value.

*Ownership*.—All persons who are the true owners of premises as above mentioned, within boroughs, of the yearly value of 10*l.*, whether they have occupied them or not. But though occupancy of the premises for which enrolment is claimed be not necessary, the claimant

must have resided in the town, or within seven miles of it, for six calendar months before the end of July.

7. Provision is made for keeping a register of voters, without entry in which no one shall vote, and for correcting the register annually; for which purpose any new claims must be given in on or before the 20th of July; and the sheriff is to decide on these, admitting or rejecting them before the 15th of September. Appeals against his decision are presented to the sheriffs attending the circuit courts, when the county or borough is within a circuit. In the counties of Edinburgh, Haddington, and Linlithgow, where no circuits are held, the appeal is made to the three sheriffs of these counties jointly.

8. Eldest sons of Scotch peers are entitled to be registered and to vote at all elections, and are eligible as members, though not registered: and no member for any county is required to be qualified as an elector, or to hold any superiority within such county. No qualification is required for members for boroughs.

These statements show that the Reform Act has given Scotland a new constitution, and most certainly it was not given before being needed. Her old representative system was so in name only. It was a mere device, by which to stifle the expression of popular feeling, and to concentrate all the authority and influence of government into a few, and those not the most worthy, hands. The Reform Act is, next to the Union, the greatest boon ever bestowed on Scotland, and has done for her what the Revolution and the Bill of Rights did for England.

But imperfections are inherent in most things; and the greatest defect, perhaps, of the new arrangements is the giving of votes in counties to tenants or occupiers of lands merely as such. They are about the very last description of persons on whom the franchise should have been conferred. Very many of them are indebted to, and dependent, to a greater or less extent, on their landlords; and the few who are independent are so because they have accumulated property, and would, in consequence, have been entitled to the franchise, had it been conferred, as it should have been, on those only who possessed a certain amount of realised property. If that be, as it unquestionably is, the best system of voting that brings the greatest number of independent electors to the poll, and keeps back the greatest number of those that are dependent, the giving the franchise to the tenants and occupiers of land must be about the very worst system, for they are, of all classes, that which is most dependent, and most at the mercy of others.

Inasmuch as Scotch tenant voters usually have leases, it has been supposed that they will be more independent than those of England, where the majority hold at will. We doubt, however, whether there be any real foundation for this opinion. Owing to the differences as to religion in Ireland, the tenants, who are mostly all Catholics, have of late years been very frequently opposed to their landlords, who are mostly all Protestants. But when no such powerful influence as that of religious feelings or prejudices comes into the field, tenants usually support the candidates patronized by their landlords. The number of those who are in a situation to act on their own convictions, without

caring for the consequences, is extremely limited indeed. In Scotland, notwithstanding the occupiers are mostly in comfortable circumstances, and leases all but universal, the number of those who vote otherwise than their landlords is so very inconsiderable, that, in estimating the chances which any candidate has of succeeding in a county, no one ever thinks of inquiring into the politics of the tenants, but merely into those of the landlords, it being supposed that the former will, as a matter of course, follow the latter. To such a degree is this the case, that instances have occurred in Scotland since the passing of the Reform Act of the choice of county representatives having been materially influenced by the sale of estates a few days before it took place, and by landlords attached to a particular family or party having been succeeded by those having different connexions or politics. If the admission of the occupiers of 50*l.* farms to the franchise in 1832 were meant to increase the already paramount influence of the landlords, or to balance the inroads that were then made upon it by other parts of the Reform Act, it was judiciously devised; but otherwise it has been an unmixed and most serious evil.

We have already noticed the mischievous influence of the enfranchisement of the tenantry over agriculture.—(See vol. i., p. 593.)

It is to be regretted that the qualifications for both county and borough electors under the Reform Act, but especially the former, are such as to admit of the easy multiplication of fictitious votes. This abuse has already been, in some places, carried to an enormous extent; and threatens, unless put an end to, to subvert every sound principle of representation.

### SECT. 3.—*Administration of Justice in Scotland.*

*Courts of Law.*—The Court of Session, which was constituted by an Act of the Scottish parliament in 1537, is the highest civil court of Scotland, having jurisdiction in all civil questions of whatever nature. It was intended to supply the place of the previously existing courts, and more especially of a judicial committee of parliament called the “Lords of Session,” whence the name of the court and the title of the judges. Originally it consisted of seven laymen and eight churchmen, including the president. In 1640, however, an Act was passed, which excluded churchmen from the court; and, though repealed in 1661, the principle laid down in it has ever since been acted upon. Other important improvements were introduced at different periods, particularly after the Revolution, when the right of appeal from the court to parliament was, for the first time, recognised. At the Union power was given to all individuals who considered themselves aggrieved by judgments of the Court of Session to appeal to the House of Lords; and it is a curious fact that, at this moment, and for a lengthened period, the principal judicial business of the House of Lords has consisted in hearing and deciding Scotch appeals. Originally, and down to 1808, the whole 15 judges sat together in one court; but in that year an Act was passed dividing the court into two chambers, the lord president presiding in the first division of seven judges, and the lord justice-clerk in the second of six, the two

remaining judges trying cases in the first instance, or, as it is technically termed, sitting as lords-ordinary. Since then the number of judges has been reduced to 13; four belonging to each of the divisions, and five acting as lords-ordinary, or sitting as single judges. The judges were at first chosen by the Scotch parliament; but since 1554 they have been appointed by the Crown. They are indifferently styled lords of session, or senators of the College of Justice. They must be 25 years of age; and, by the Treaty of Union, no person can be named to the office unless he have served as an advocate or principal clerk of session for five years, or as a writer to the signet for ten. The salaries of the puisne judges have recently been raised to 3000*l.* a-year each; those of the lord justice-clerk and lord president being respectively 4500*l.* and 4800*l.*

At its outset the Court of Session was intended to serve as a standing or perpetual jury for the trial of cases; the introduction of petty juries into the trial of civil cases in Scotland being only of very recent date, as well as of limited application. It was unknown till 1815, when a special or jury court was instituted for the trial of cases involving questions of fact. But in 1830 this court was suppressed, and its powers transferred to the Court of Session, which now avails itself of the assistance of petty juries in the trial of the above description of cases.

The Court of Session holds in Edinburgh two terms, or, as they are called, sessions, annually; the winter session lasting from the 1st of November to the 20th of March, with a Christmas recess of three weeks; and the summer session from the 20th of May to the 20th of July, without recess. The Privy Council has power to lengthen the sessions, if necessary; and jury trials, when they cannot take place during session, take place at sittings in Edinburgh before or after session, or on circuit at the different towns where the criminal circuit courts are held. During session the court sits five days a-week, there being no sittings on Monday, except occasionally for jury trials.

The barristers who practise before this court form a body called the faculty of advocates, of which their elective president is styled the dean. The only precedence belonging to counsel in the Court of Session, besides that of seniority, belongs to the dean and to the two Crown counsel, the lord advocate and solicitor-general. The number of the faculty is at present about 460. Of these, only about 200 reside in Edinburgh; and not above half that number can be considered as really practising barristers. The attorneys or solicitors before the court, usually called agents, consist of the Society of Writers to his Majesty's Signet (a highly privileged body), the solicitors before the supreme courts, and the advocates' first clerks, the last being the earliest, and, till about the beginning of last century, the only authorised agents. Both among the counsel and solicitors certain members are appointed by the court to conduct *gratis* the causes of individuals who exhibit certificates of poverty, and show that they have just cause of action; and on such causes no fees of court are charged.

The judges, counsel, and agents, with the officers of court, form the body called the College of Justice, which, besides exemption from some local taxes (to which, probably, it will soon be subjected), enjoys

also the privilege of having all suits, at the instance of its members or against them, tried before the Court of Session.

The Court of Session judges both in law and equity, being at once the High Court of Chancery and the Great Common Law Court of the kingdom; and recognises no division of suits into actions at law or in equity, nor any distinction of forms as applicable to these. Its jurisdiction extends over all Scotland, and is twofold—original jurisdiction and jurisdiction of appeal. Its original jurisdiction is in most matters shared by the inferior courts; but in some actions it is exclusive. Such are, actions for having the subsistence of a right of property, or inferior right in heritage, declared by a sentence of court; all other competitions of hereditary right; actions of reduction (*i. e.*, for cancelling deeds, contracts, decrees, &c.); judicial sales of the property of minors or bankrupts, &c. Its jurisdiction on appeal extends, with few exceptions, to all judgments of inferior courts. In a few matters the court possesses only an appellate, and no original, jurisdiction; such are suits where the demand does not exceed 25*l.*, which must be brought, in the first instance, before an inferior court. Since the abolition of the Admiralty Court in 1830 it has likewise original jurisdiction, along with the sheriffs, in admiralty causes; and the power of reviewing sentences pronounced by the sheriffs as inferior admiralty judges. The Commissary (Consistorial) Court having been abolished at the same time, most consistorial cases may be decided either in the Court of Session or the Sheriff Courts, the supreme court having the power of review; and in some consistorial actions (as actions of divorce, bastardy, or for having the existence of a marriage judicially declared, &c.) the jurisdiction of the Court of Session is exclusive. The circumstance, too, that the jurisdiction of every inferior judge is confined to his own territory often makes the jurisdiction of the Court of Session exclusive in those descriptions of causes. Instances of this occur where the defendants reside in different counties; or where a defendant does not reside in any part of Scotland, but is subjected to the jurisdiction of the Scotch courts, by possessing property in the country.

The inferior courts of law are the courts of the boroughs, justices of peace, and sheriffs. The first are familiarly termed "Baillie Courts," from the title of the magistrate, resembling the English alderman, who presides in them, with occasionally the assistance of a legal assessor. Their civil jurisdiction within the borough is, in some cases, equivalent to that of the sheriff in the county; but the number and value of the causes brought before them vary, being chiefly determined by the reputation of the assessor, and the amount of their business is in all cases limited. As criminal judges, the magistrates possess the powers necessary for maintaining the police of the borough. Their jurisdiction extends to no offence more serious than petty riots; and the punishments they can inflict do not exceed fine, imprisonment, or banishment from their territory. Another borough magistrate, the dean of guild, or head of the Merchant Company, anciently possessed jurisdiction in mercantile causes; but this is now lost, and his functions are restricted to the superintendence of the markets, the removal of such nuisances as ruinous buildings, &c. The magistrates of

boroughs not royal have also jurisdiction, the extent of which depends on their charters, but it is in all cases trifling.

The powers of *justices of the peace* are properly only those which are necessary for the maintenance of public order. They can singly commit criminals, and hold petty sessions (where two are a quorum), and quarter sessions. Their powers are still considerable in the regulation of highways, bridges, and fences, and they have also power to convict under the game laws, and in some revenue cases; but without, in any instance, possessing the power of transportation: they decide in questions between masters and servants, &c. Special statute has conferred on them one very useful branch of jurisdiction, purely civil; viz., the holding of small debt courts, for deciding actions for debt where the demand does not exceed 5*l.* besides costs. In such causes their decision is subject to no appeal or challenge, except on the ground of malice or oppression; and their procedure is of the same summary nature with that in the courts lately instituted under the sheriffs for the same sort of causes: the latter have already taken away great part of the business which used formerly to come before the justice of peace small-debt courts.

*Scotch sheriffs* are paid legal functionaries, who, besides various executive duties resembling those of the English sheriffs, are also judges possessing within their counties a jurisdiction which, though confined in criminal matters, is in civil causes extremely extensive.

Each county of Scotland has one principal sheriff, called, (but improperly, sheriff-depute. He is named by the Crown, must be an advocate [barrister] of at least three years' standing at the time of his appointment, and cannot act as counsel in any cause which comes from the county of which he is sheriff. He holds his office during life or good behaviour; and receives a salary, varying from 300*l.* to 800*l.* a-year, according to the supposed onerousness of his duties. In the counties of Edinburgh and Lanark, personal residence is required: In the other shires the sheriff was bound, till 1838, by the letter of the law to reside within his sheriffdom at least four months every year; but the regulation was not enforced, and is now repealed. Sheriff-deputes are now, in fact, with the above exceptions, required to be lawyers attending the courts in Edinburgh, and the ordinary business of the county is devolved on the sheriff-substitutes, or deputies of the principals. In extensive counties there are usually several sheriff-substitutes. This very useful class of judges must be chosen from advocates, writers to the signet, solicitors of the supreme courts, or solicitors of three years' standing before a sheriff court; and, though nominated by the sheriff-depute, they cannot be displaced without the concurrence of the lord president and lord justice-clerk. At present their salaries, which were raised in 1840, vary from 300*l.* to 550*l.* a-year, exclusive of fees. The substitutes reside constantly in the county, and perform most part of the business of the office, both in and out of court; the principal sheriff exercising merely a power of superintendence and review, and usually visiting the county only when special matters require his attendance, or for the purpose of holding statutory, registration, and small debt, commonly called *Victoria Courts*. The duties of counsel and attorneys before the

sheriff courts are performed by agents, called writers or solicitors, which correspond with English procurators. They are not admitted by the Court of Session, but by the different sheriff courts throughout the kingdom, on varying qualifications; and are only permitted to practise before the particular court to which they are admitted. It would tend much to the uniformity of the law were they all (like the advocates, who form the proper *bar* of Scotland,) admitted by the Court of Session on some general qualification, and authorised to practise in every court of the kingdom.

The ministerial or executive duties of the sheriff are multifarious. He executes writs issuing from the Exchequer, and in general attends to the interests of the Crown in his sheriffdom: he returns the juries both for civil and criminal trials: is the returning officer at elections for the county and boroughs; and, under the Scotch Reform Act, decides on claims for enrolment in the list of voters. He has to attend to the preservation of order in the county; and the apprehension and committal of criminals are chiefly devolved on him. Until a comparatively late period, the sheriff exercised a criminal jurisdiction, extending in some cases to capital punishment; but his powers, in this respect, are now greatly abridged. He still occasionally tries criminal cases with a jury, but the sentence may be appealed from to the court of judicature. No sentence, except for petty offences, involving fine, imprisonment, or, at most, banishment from the county or borough, can be pronounced by any legal authority in Scotland without a jury; nor can any person be now imprisoned for any debt under 8*l.* 6*s.* 8*d.*

The lowest branch of the civil jurisdiction of the sheriff is exercised in the small-debt courts, which were instituted in 1825 for the decision of questions of debt not exceeding 5*l.* besides costs. In 1837 the jurisdiction of these courts was extended to sums of 8*l.* 6*s.* 8*d.*; and besides the small-debt courts at the head town of the shire, the sheriff now holds frequent small-debt circuit-courts in every district of his sheriffdom. In these cases, unless on cause shown to the satisfaction of the judge, no counsel or solicitor is allowed to attend, nor any pleadings or evidence to be taken down in writing: the parties appear by themselves, or unprofessional friends, and are heard personally, and may be examined on oath: the costs do not exceed 2*s.* or 3*s.*, and the decision is subject to no appeal.

In the sheriff's ordinary court of record, his civil jurisdiction is not limited by the amount of the interest at stake. It extends to all personal actions, on bond or other obligation; and to those actions relating to real property, where the possession only, is in question; such as actions by landlords to have tenants removed, or by tenants or other lawful possessors against any one who has violently turned them out of possession. The sheriff, also, may decide, in the first instance, on all admiralty and on some consistorial actions; and his jurisdiction was, in 1838, extended to questions of nuisance and servitude. Since 1836, the sheriff has also a concurrent jurisdiction with the Court of Session, in the process of *cessio bonorum*—an action by which an insolvent debtor, on making over his entire property for behoof of his creditors, is relieved from personal arrest for the debts specified in his

process. It was formerly necessary that he should be 30 days in prison; but he may now apply as soon as a writ is taken out against him. The sheriff is now, also, empowered to stay execution on judgments for less than 25*l.*, which, previously to 1838, could be staid only by the Court of Session; and he can recal arrestments of funds laid on by his own warrants.

The pleadings in actions in the sheriff's ordinary court are mostly in writing; and his judgments may be brought under the review of the Court of Session, and of the judges on the circuits.

When juries are used in the trial of civil cases, their verdicts cannot be appealed from to the House of Lords; but application may be made to the "Inner" House or chamber of the court to which the case belongs, for a new trial, on the ground of misdirection by the judge, of illegal conduct by the jury, or of the verdict being contrary to evidence. The decision of the court, granting or refusing a new trial, cannot be appealed from; but if the verdict have left any questions of law for the decision of the court, their judgment on these may be reviewed. A party may, however, open his way to the House of Lords, by presenting, during the trial, a bill of exceptions to some part of the conduct of the presiding judge, either objecting to his law as laid down in his charge to the jury, or in his admission or rejection of evidence, or the like; and the decision of the Court of Session on the bill of exceptions may be appealed from. A new trial is seldom granted except under the condition that the party claiming it pay the expenses of the first. Juries in civil cases in Scotland, consist, as in England, of 12 jurors, and their verdicts must, like the English, be unanimous. In criminal cases, when it is most advantageous, unanimity is not necessary. (See *post*.)

Besides a civil jurisdiction, the judges of the Court of Session sit under a separate commission, as the Teind (Tithe) Court, which was remodelled at the Union, the lords of session being then made perpetual commissioners, and their judgments subjected to the review of the House of Lords as in other cases. The parish clergy of Scotland receive fixed stipends or salaries; consisting, in most cases, partly of money and partly of corn (victual) convertible into money at the prices of the day. These salaries are derived from the teinds or tithes set apart for the support of the clergy under an arrangement carried into effect by an Act of the Scottish Parliament passed in 1633. The clergy are not, however, entitled, as matter of right, to claim payment of the full teind or tithe of their respective parishes, unless the Teind Court should think it required for their maintenance, and authorise them to demand it. If the Court think that some portion of the tithe will suffice for this purpose, the clergy receive such portion only. When it is said in Scotland that the teinds or tithes of a parish are "exhausted," it is meant that the clergyman receives their entire amount, and that, consequently, he has no further claim of any kind upon his parish. This is now the case in a great many parishes in Scotland; and under the provisions of a late Act government advances a sum of about 10,000*l.* a-year to make up the stipends in such parishes to 150*l.* a-year, exclusive of glebes and houses, (see *post*). The business of the Teind Court is to settle all questions regarding stipends, to

disjoin or unite parishes, change the situation of churches, &c. It has power to augment the stipend of parishes, in which the teinds are not exhausted, once in twenty years, on the suit of the clergyman. For these augmentations, and some other business, the thirteen judges sit every second Wednesday during session; but the more laborious parts of their duties are devolved, like all other drudgery, on the junior judge, who takes up such questions for the purpose of preparation every Saturday.

In no civil court of Scotland is it possible by any device to procure, before or during process, arrest of the person of the defendant; unless in the solitary case where a creditor makes oath that his debtor is in *meditatione fugæ*, or intends to abscond from the kingdom. But it is usually possible, without personal arrest, to compel a defendant to find bail for satisfying all the demands of the suit. In Admiralty cases, as it is supposed the parties may often be foreigners, security may be applied for directly, if the case be in the Court of Session; and in other actions it may generally be obtained indirectly, through what is called arrestment, which is a legal process executed against the debtors of a defendant, prohibiting them from making payment. This prohibition may be kept up till the determination of the case, unless the defendant enter satisfactory bail.

The *Court of Justiciary*, the supreme criminal court of Scotland, which was brought nearly into its present form in 1672, consists of five judges, who are also judges of the Court of Session, specially commissioned by the sovereign, together with the justice-general and justice-clerk; the former, or, in his absence, the latter, being president. In 1836, the office of lord-justice-general (which had previously been a sinecure held by a nobleman) was conjoined with that of lord-president of the court of session, and under the latter the acting head of the court is the lord-justice-general. The court holds sittings in Edinburgh during the vacation or recess of the Court of Session, and occasionally on Mondays during the terms of that court. And twice a year, in the spring and autumn vacations, the judges hold circuits in the chief provincial towns; two going each circuit. An additional circuit is now held in Glasgow, during the Christmas recess; and the Privy Council may appoint more should they think fit.

In Scotland criminal prosecutions do not proceed at the instance of the party injured, but at that of a public officer, and at the public expense; the private party having it in his power to prosecute in his own name, even after the public prosecutor has refused, if he choose to do so at the risk of being found liable in damages and costs. The public prosecutor is the Lord Advocate, or first Crown counsel, who being frequently absent in Parliament, has many of his peculiar duties performed by the second Crown counsel, or solicitor-general, and by the advocates depute, on whom, indeed, most part of the criminal business devolves, especially that of attendance at circuits. Every county and borough has a procurator-fiscal, or officer whose duty it is to attend to the apprehension and examination of criminals. On receiving an information subscribed by the party injured, he procures a warrant from a magistrate for committing the accused person for examination. This usually takes place before the sheriff-substitute,

who examines witnesses without oath, and allows the prisoner, if he please, to make a declaration, which, being properly attested, may be founded on at trial as evidence against him. The committal for examination cannot last more than a few days, without subjecting the magistrate to a suit for damages; and the procurator-fiscal acts under a like responsibility, which, however, does not extend to the counsel for the Crown. If no case be made out on examination, the prisoner is dismissed: otherwise, the sheriff commits him for trial, and transmits the evidence to the Crown counsel. This committal is, likewise, made under a liability in damages, if it have been improperly ordered.

As soon as a prisoner is committed for trial, he may protect himself from undue delay of trial by the remedy called "*running his letters*;" a process in force since 1701, and analogous to the Habeas Corpus Act. The prisoner presents an application to any judge competent to his trial, who must, within twenty-four hours, give an order on the public prosecutor to bring on the trial within sixty days, with intimation that at the end of that time the prisoner will be discharged. When the crime is serious, and the time of circuit distant, this application often compels the Crown counsel to bring the prisoner and witnesses to Edinburgh. If, at the end of the sixty days, no criminal indictment be executed on the prisoner, he is set at liberty; but he may be again imprisoned, on a warrant from the Court of Justiciary. In this case, if the trial be not concluded within forty days after the second apprehension, the prisoner must be set at liberty, under heavy penalties on those detaining him; and is declared for ever free of the charges against him.

The magistrate must, on application, grant or refuse bail, and fix its amount within statutory limits. All offences are bailable, except capital crimes, and those post-office offences which used to be capital.

The Crown counsel, on examining the declarations of the witnesses, may immediately order the prisoner to be liberated, or fix his trial, either before the Justiciary or Circuit Courts, or, if the crime admit of it, before the sheriff. In the course of last century we find the latter exercising a criminal jurisdiction, which extended, in some cases, to life and death; but his powers, though not strictly defined, are now greatly limited. It is quite certain, that without a jury the sheriff cannot lawfully pronounce any sentence exceeding fine, imprisonment, or banishment from the county; and no trials take place before sheriffs without a jury, excepting for petty offences against the public peace. In trials before the principal sheriff and a jury, the procurator-fiscal of the shire acts as prosecutor; and the sentence may be appealed from to the Court of Justiciary, whose decision is final.

In Scotland there is no coroner; and no grand jury, except in cases of high treason, which are tried in the English form, before the Court of Justiciary, or a commission of Oyer and Terminer, of which three members must be Justiciary judges.

In ordinary causes, the indictment must be delivered to the prisoner at least fifteen days before trial. It must be drawn specifically and accurately, slight technical errors being sufficient to vitiate it: and it must have annexed to it a list of the witnesses and of the jurymen who are to be summoned, and a list of the articles to be exhibited

the evidence for the prosecution, which, if demanded, must be also shown to the prisoner before trial.

The day of trial being arrived, either in the High Court of Justiciary or Circuit Court, the jury are taken from a list of, at least, forty-five, returned by the sheriff, of whom two-thirds are common, and one-third special, jurors. The jury is ballotted for, so that one third may be special, and two-thirds common, jurors; though, if the accused be a landed proprietor, he is entitled to have a majority of special jurors. Besides challenges on cause assigned, the prosecutor and prisoner may each challenge peremptorily five jurors, but only two special jurors. The number of the jury is fifteen. If a prisoner do not appear, he cannot be convicted of the crime charged, but merely have sentence of outlawry pronounced against him; from which he may afterwards be relieved on surrendering himself for trial.

The first step is to read the indictment, and to determine on its relevancy, *i. e.* whether the facts alleged be sufficient, if proved, to constitute the crime charged. This is the stage for bringing forward all objections to the indictment, which would not be received after the court has formally declared it to be good. A prisoner has always counsel: if he be too poor to hire one, the court will order a barrister to act for him; but this is never necessary: the number of junior counsel willing to act gratuitously is always greater than that of the trials; and, in Edinburgh, at all times, and on the circuits, when important civil jury trials are to come on, it is not unusual to see the senior counsel conducting, without remuneration, the defence in difficult criminal causes.

The witnesses do not hear each other examined; and if the prosecutor be shown to have communicated with them after they were formally cited to appear in court, the prisoner may successfully object to their being examined. The prosecutor, too, must close his evidence before the evidence in exculpation begins. The Scotch rules of evidence give the prisoner an advantage, which, in England, he enjoys only in cases of high treason: he can be convicted only on the testimony of two witnesses, or of one witness supported by circumstantial evidence so strong as to equal that of a second witness. The evidence for both parties being finished, counsel on both sides address the jury, the prisoner having the last word; after which the judge charges the jury.

The verdict need not be unanimous: the narrowest majority is sufficient to convict as well as to acquit. But this practice, though popular in Scotland, is, we think, a serious defect; for there seems to be no other means than compelling the jurors to be unanimous for procuring that attention to and discussion of the subject that is so essential. A verdict of Not Guilty indicates a belief by the jury in the prisoner's innocence: a verdict of Not Proven indicates suspicion, but a want of proof of guilt. Either verdict is conclusive: it is not possible again to imprison or try the prisoner for that crime. In capital cases, the Crown counsel have power, before moving for sentence, to restrict the libel, a form which disables the judge from pronouncing a capital sentence. After sentence has been pronounced, the criminal may, as in England, appeal to the mercy of the Crown; and to allow time for this appeal,

it is provided that no capital sentence shall be executed sooner than fifteen days after sentence, if south, or sooner than twenty, if north of the Tay. Till lately the time was longer. There is no appeal from a judgment of the justiciary court to the House of Lords.

It is not going too far to say, that, down to a very recent period the Court of Justiciary was, in as far as respects political cases, one of the most corrupt and worthless tribunals in Europe. Owing to the vicious mode in which juries were formerly selected, (see *ante*, p. 171,) it was always in the power of the Lord Advocate, or public prosecutor, to get a jury appointed favourable to his own views; and the judges having been appointed by the Crown, and looking to it, most probably, for farther advancement for themselves or their families, were, with few exceptions, its obsequious tools. Hence, in Scotland, to be prosecuted for a political offence was, for a lengthened period, nearly equivalent to being condemned. Luckily, however, this disgraceful state of things has been reformed. Juries in Scotland are now fairly selected; the accused has the same right of peremptory challenge as in England; so that, the judges, however disposed, can no longer pack juries and dictate verdicts.

But the judges of justiciary still possess, in virtue of what has been denominated the *native vigour* of the court, the despotical power of declaring new crimes, and of imposing discretionary punishments upon those by whom they are committed. How improbable, soever, the statement may appear, there is really no act, in the whole range of human conduct, which the Court of Justiciary may not, at pleasure, brand as a crime, by sustaining the relevancy of an *indictment* or charge, at the instance of the public prosecutor, for its commission; and upon conviction the court may inflict such punishment as it thinks proper upon the criminal. We doubt, whether any tribunal with such tremendous powers exists in Russia, Turkey, or Japan. Unchecked by statute, or by appeal to any superior authority, the only palliation of its abuse is to be found in the prerogative of mercy! It may well excite astonishment that so monstrous an anomaly should have been so long tolerated in any country, and especially in one having such high pretensions to freedom and civilization. Perhaps it may be said, that we live in times when the most dangerous and extravagant judicial authority is little likely to be abused, and is, consequently, of little practical importance. But every body, in any degree acquainted with the history of Scotland, knows that the *native vigour* of the Court of Justiciary has been exerted over and over again, and been perverted to the basest purposes. And can any one presume to say, that in time to come, circumstances are never to arise to bring this irresponsible power, if it be not suppressed, once more into activity? The possibility of any such revival should be guarded against by its abolition. And we confidently anticipate, that at no distant period this will be effected; and that the highest criminal court in Scotland will be deprived of an authority which gives it an unconstitutional character; and which cannot be exerted without trampling on every principle of justice. If it require additional powers let them be granted by statute; but do not let them be assumed by time-serving judges, at the suggestion of the Crown or of the Lord Advocate.

## CHAPTER VII. CONSTITUTION, COURTS, &amp;c., OF IRELAND.

SECT. 1.—*Sketch of the Political History of Ireland.*

THE early accounts of Ireland are singularly disfigured by fable. It was not invaded by the Romans, whose knowledge of it could, therefore, be derived only from the reports of the Britons, or of natives of Ireland in Britain. The fair presumption, however, is, that its inhabitants were then more barbarous than even those of this island.\* In the 5th century Christianity was introduced into Ireland by St. Patrick, a native of North Britain, who, in his youth, had been carried a captive into Ireland. Along with the gospel the British missionaries introduced the letters and learning of Rome; and a school founded at Armagh, not long after, acquired considerable distinction; but it would be as inconsequential to infer, from the fact of this and a few other schools existing in the country, that it was then distinguished by literature and civilization, as it would be to allege that such was the case with the Western Islands, and the adjacent parts of the mainland of Scotland, in the 8th century, because there was then a celebrated monastery and school in Iona.

The accounts of the political state of Ireland, previously to the English invasion, are obscure and contradictory. This much, however, may be gleaned from them, that the island was parcelled out into a number of semi-independent states or clanships, which sometimes did, and sometimes did not, acknowledge their dependance on a chief prince or king of all Ireland. Incessant hostilities were waged by the petty sovereigns against each other, which were not even interrupted by the invasion of the Danes in the 9th century. The latter, in no very long space, became masters of the greater part of the coasts of the island; and occupied the ports of Dublin, Wexford, Waterford, and Cork, when they were taken by the English.

The successors to the petty sovereigns, or to the chiefs of clans or septs, were called *tanists*, and were generally elected from the family or kindred of the reigning prince or chieftain during his lifetime. Females were excluded from the succession, and minors were never chosen as *tanists*; the object being to have a prince of mature years always at the head of the seignior or clan, who might be able to direct their operations, and to defend them from hostile attacks. The laws of the Irish were such as might be expected to prevail among a rude and barbarous people; and were administered in the open air by hereditary judges, denominated *brehons*. The most atrocious crimes might be compounded for by the payment of an *eric*, or fine, rated in cattle, or some sort of produce; and, as in all cases a considerable portion, and in some cases the whole, of the fine went to the lord, or chief of the sept, his interest obviously led him to encourage rather than to repress crime! The laws with respect to the succession to

\* Pomponius Mela, who has given so accurate an account of the soil of Ireland, and of the richness of its pastures, says, *Cultores ejus inconditi sunt, et omnium virtutum ignari, pietatis admodum expertes* (Lib. iii. sec. 6.) Strabo (lib. iv.) gives some extraordinary details respecting the Irish, which, however, he does not state of his own authority, but merely as having been reported to him.

fixed property were such as would have alone served to extinguish all industry. "Through the whole country," says Leland, "the tenure of lands determined with the life of the possessor; and, as the crimes or misfortunes of men frequently forced them from one tribe to another, property was eternally fluctuating, and new partitions of lands made almost daily. Hence the cultivation of lands was only in proportion to the immediate demands of nature, and the tributes to be paid to superiors." (*Hist. of Ireland*. Introduct. p. 34.)

A people with such institutions could not be otherwise than barbarous; and such, in fact, they were. Sir William Petty, who was well versed in the history and intimately acquainted with the condition of Ireland, declares that "at this day (1672) no monument nor real argument evinces that the Irish when first invaded, had any stone-housing at all, any money, any foreign trade, or any learning (but the legends of saints, psalters, missals, rituals, &c.), or geometry, astronomy, anatomy, architecture, enginery, painting, carving, or any kind of manufacture, or the least use of navigation or the art military." (*Political Anatomy*, p. 317). There cannot, in truth, be any doubt whatever (despite the fables and forgeries of their monkish annalists) that at the epoch of the English invasion the Irish were all but total strangers even to the rudiments of civilization, and were immersed in the lowest depths of barbarism. "Neither was it possible to reform the evil customs that prevailed among the Irish, without altering their government; nor could that be accomplished by any other means than by their being subjected to some more civilized foreign power."\*

Soon after the English conquest effected by Henry II., in 1171, the island was divided by John into twelve counties. But, though the king of England received the submission of the Irish chieftains, and was nominally lord of Ireland, his authority was, for a lengthened period, only partially recognized. The native families of O'Connor, O'Neil, O'Melaghlin, Byrne, and O'Toole, still asserted, and to a certain degree exercised, sovereign authority in Connaught, Ulster, and part of the midland districts. Even in Leinster and Munster, where the English were principally settled, and which had partially adopted the laws and constitution of England, the sovereign authority was far from being generally or firmly established. The allegiance of several of the great feudal barons, who held extensive tracts of land, was frequently little better than nominal. The English families of De Burgh in the West, of Desmond in the South, and of Butler in the central parts, adopted the manners of the natives, and often became the declared and most dangerous enemies of their mother country. At one time there were nine counties palatine, with independent jurisdiction, in the part of the island subject to England, and distinguished by the name of the *pale*. The miseries resulting from the interminable disorders inseparable from such a state of things, were increased in 1315 by an

\* *Lyttelton's Henry II.*, v. 56; where the reader will find an excellent account of the state of Ireland previously to the English invasion. See also the excellent work of Dr. Ledwich on the *Antiquities of Ireland*, 4to. 2nd ed., Dublin, 1804, *passim*; Moryson in his *Itinerary*, part iii. pp. 156-164, &c., ed. 1617, gives various statements strikingly illustrative of the barbarism of the Irish. See also *Spenser's State of Ireland*, *Davis's Tracts*, &c.

invasion of the Scotch, under Edward, brother of Robert Bruce. He overran the greater part of the country, but was finally defeated and killed near Dundalk. The resources of the country were also wasted in subsidies, and its youth carried away to fight the battles of their masters on the continent, or in England, during the wars between the houses of York and Lancaster. After the death of Richard III., and the accession of Henry VII. had terminated this sanguinary struggle, Ireland was chosen by the defeated party of Yorkists as a theatre on which to commence a system of operations for the dethronement of the new monarch. In consequence, Lambert Simnel was sent thither by the Duchess of Burgundy as the descendant and representative of Edward IV. His title was acknowledged by the Anglo-Irish, and he was crowned in Dublin with all the ceremonies attendant on the inauguration of the ancient Irish sovereigns. A similar, though less vigorous effort was afterwards made in favour of Perkin Warbeck, whose title was also acknowledged in the south of Ireland.

Early in the reign of Henry VIII. the spirit of insurrection broke out in a formidable shape. The chief authority had previously been exercised for a lengthened period by the rival families of the Fitzgeralds and Butlers, whose heads were the Earls of Kildare and Ormond. The former of these noblemen was at this period lord-lieutenant. On being summoned to England, to answer charges brought against his government, he appointed his son, Lord Thomas Fitzgerald, his deputy. The latter, on a false rumour of his father's execution in London, threw up the reins of government, declared himself an open enemy to the English monarch, ravaged the pale, and laid siege to Dublin. But being repulsed in this attempt, and having soon after surrendered to Lord Grey, the new lord-lieutenant, he was sent prisoner to England, where he expiated his offences on the scaffold, along with several of his near relatives, who, though unconnected with his acts, were unjustly implicated in their consequences.

The introduction of the Reformed doctrines, which was effected with equal violence and contempt for the prejudices of those within and without the pale, brought a new element of discord into Ireland. The native Irish, and many descendants of the English settlers, were devoted adherents of the church of Rome. Their hostility to the new doctrines did not, however, display itself openly during the reign of Henry, who, about this time, changed his title of lord for that of king of Ireland, nor in the reign of his immediate successor, Edward VI.; but it broke out with unrestrained fury in that of Elizabeth, by whom the new church was fully established. O'Neil, who possessed nearly the whole of Ulster, instigated by the court of Spain, hoisted the standard of rebellion. He was supported by a Spanish armament, which took possession of Kinsale, without, however, being able to maintain itself in that position. After a lengthened contest O'Neil was forced, by the energetic and prudent measures of Lord Mountjoy, to make an unconditional submission; and his subsequent flight from Ireland terminated the war. Ulster was soon after divided into counties, and planted with numerous bodies of English and Scotch settlers; and hence the improvement of that province, and its

distinctive character. The reign of James I., and the earlier part of that of Charles I., formed a period of undisturbed tranquillity. But the disputes between the latter and the English parliament afforded the Irish a flattering though fallacious prospect of recovering their independence and confiscated estates, and of re-establishing their religion. To effect these objects, an insurrection was secretly organised, on a very extensive scale, embracing, not only the native Irish, but many Roman Catholic families of English descent. This conspiracy, the outbreak of which was to be signalized by a general massacre of the Protestants, took effect in 1641. The treachery of one of the conspirators prevented Dublin from falling into their hands: the insurrection broke out simultaneously in Ulster, and soon after spread into most other parts of the country. The most horrible excesses were committed by the insurgents, which were sometimes fearfully retaliated: and the country continued to be a prey to all the horrors of civil war till 1649, when Cromwell appeared in the field, at the head of a well-disciplined and powerful army. Having taken Drogheda by storm, he delivered it up to military execution; and such was the terror inspired by the fate of this city, that almost all the strongholds of the Catholics soon after fell into his hands; their estates were confiscated, and the English supremacy was, for the first time, fully established in every part of Ireland.

After this tremendous visitation Ireland continued tranquil, and began to advance considerably in prosperity, till the events connected with the Revolution of 1688 made it the theatre of fresh and sanguinary contests. After the flight of James II. from England, he landed, with a view to retrieve his fortunes, in Ireland, where he was received with open arms by the Catholics; and having brought with him from France a number of experienced troops and officers, partly Irish and partly French, he soon found himself at the head of a powerful army. Luckily, however, he was entirely destitute of the talents necessary to ensure success in such an enterprise. The battle of the Boyne, on the 1st of July, 1690, gained by William III., turned the tide completely in favour of the latter; and the battle of Aughrim, on the 12th of July, 1691, when the British under Ginkell, afterwards earl of Athlone, obtained a decisive victory over the troops of James II., commanded by St. Ruth, who fell in the action, was the last great effort made by the Irish to achieve their independence. The remains of the Irish forces, having retreated to Limerick, capitulated under conditions embodied in the famous convention called the treaty of Limerick, 3rd October, 1691. The first of these was as follows:—  
 “The Roman Catholics of this kingdom shall enjoy such privileges in the exercise of their religion, as are consistent with the laws of Ireland; or as they did enjoy in the reign of King Charles II. And their Majesties, as soon as their affairs will permit them to summon a parliament in this kingdom, will endeavour to procure the said Roman Catholics such further security in that particular, as may preserve them from any disturbance on account of their said religion.”

But, though William III. was no willing party to its violation, this treaty was not long in being broken. This flagrant breach of faith, from the disastrous influence of which England, as well as Ireland, is still suffering, is entirely to be ascribed to the intolerance of the Eng-

ish and Irish Protestants, who, flushed with victory, did not hesitate, despite the stipulations to the contrary in the treaty, to trample the Catholics under foot, and as far as possible to exterminate their religion. "By the total reduction," says Mr. Burke, "of the kingdom of Ireland, in 1691, the ruin of the native Irish, and in a great measure, too, of the first races of the English, was completely accomplished. The new interest was settled with as solid a stability as anything in human affairs can look for. All the penal laws of that unparalleled code of oppression, which were made after the last event, were manifestly the effects of national hatred and scorn towards a conquered people, whom the victors delighted to trample upon, and were not at all afraid to provoke. They were not the effects of their fears, but of their security. They who carried on this system looked to the irresistible force of Great Britain for their support in their acts of power." (*Letter to Sir H. Langrishe*, p. 44.)

The violation of the treaty of Limerick being accompanied by extensive confiscations, and followed up by the enactment of the penal code, completed the prostration of Ireland. Hence, by a singular contradiction, the same revolution that established freedom of conscience and a liberal system of government in England and Scotland, established an odious despotism and persecution in Ireland. In the words of Mr. Burke, "it established, in defiance of the principles of *our* revolution, the power of the smaller number, at the expense of the religious liberties of the far greater, and at the expense of the civil liberties of the whole."

During the century towards the close of which the treaty of Limerick was concluded, most part of the landed property of Ireland changed masters. In the reign of James I. more than 500,000 Irish acres escheated to the Crown through the rebellion and flight of the earls of Tyrone and Tyrconnell. The extent of the forfeitures under Cromwell has not been exactly ascertained; but they were quite immense, and probably included from 6,000,000 to 6,500,000 Irish acres. The forfeitures arising out of the revolutionary struggle, though of much less importance, are believed to have amounted to about 1,000,000 Irish acres. Hence, as the area of Ireland may be roughly estimated at 12,000,000 Irish acres, it follows that nearly two-thirds of the entire island had been confiscated; some of it twice or three times in the course of a century! Lord Clare, indeed, in his famous speech on the Union, represents the whole country as having been confiscated, with the exception of the estates of five or six families of Irish blood; but there can be no doubt that this statement is much exaggerated. (*Hal-lam's Const. History*, iii. p. 528.)

The violation of that article of the treaty of Limerick, referred to above, which guaranteed to the Catholics the religious privileges they had enjoyed during the reign of Charles II., was immediately felt. The ardent spirits who survived the wreck of their cause, shut out from all hope of distinguishing themselves at home, withdrew to France to await some favourable chance of recovering their lost fortunes; and the original stimulus thus given to emigration was perpetuated by the penal laws, which drove the *élite* of the Catholic body to seek an asylum in a foreign land from the grinding

persecution they suffered in their own. It has been stated, on the authority of records in the military offices at Paris, that, between 1691 and 1745, no fewer than 450,000 Irishmen died in the service of France.\* The Catholic clergy, hunted down like animals *feræ naturæ*, were driven out after the others, with the exception of those who (like the Cameronians in Scotland) clung to their creed and their congregations through all extremities; and continued, in spite of the combined efforts of fanatical and political persecution, to hold their religious assemblages in uninhabited houses in towns, and in caves, glens, and morasses in the country.

The English gentry, who had acquired possession of the forfeited estates, speedily found themselves involved in difficulties. Their possessions, though ample, were occupied by a tenantry by whom they were regarded as usurpers, and whom they despised for their religion, their ignorance, and their barbarism. In this state of things, and being, as formerly stated, almost universally absentees, they were compelled to employ middlemen; and, except in the north, and in those parts of the country where they were able to substitute pasturage for tillage, the occupiers of their estates were, for the most part, lazy, bigoted, and impoverished.

The history of Ireland, from the treaty of Limerick down to 1768, is almost wholly confined to the unavailing efforts made to extirpate the Catholic religion by penal laws, and to the petty struggles of the newly-formed Protestant aristocracy to assert a position of independence in their parliamentary connexion with Great Britain. The principal provisions of the penal laws may be summed up with sufficient accuracy for our purpose in a very few words. By a succession of Acts passed during the reigns of Anne, George I., and George II., Popish fathers were prohibited from being guardians to their own children conforming, however young, to the Protestant religion. No Protestant could marry a Papist having an estate in Ireland. Papists could not purchase lands, nor hold them by lease for a term longer than thirty-one years; and if such lease produced a profit greater than one-third part of the rent, the right in it ceased, and passed over to the Protestant who discovered such increased profit. The estate of a Papist was to be gavelled (divided) after his death among his children; and, in failure of children, among his collateral kindred. Papists were excluded from residence in Galway and Limerick. Voters at elections were obliged to take the oaths of allegiance, abjuration, and supremacy. No Papist could take an annuity for life. No Papist was allowed to keep a school, or to teach any one in a private house except the children of the family. Popish priests, on conforming, were to receive a stipend of 30*l.* per annum, until better provided for in the Protestant church. The following rewards were offered for discovering Popish clergymen and schoolmasters:—For an archbishop, bishop, or vicar-general, 50*l.*; for a regular or secular priest not registered, 20*l.*; for a schoolmaster, 10*l.* Protestants were authorised to proceed in chancery to compel discovery against any person suspected of being concerned in any sale, lease, mortgage, or incumbrance in trust for a Papist; all issues under

\* *M<sup>r</sup> Geoghegan, Histoire d'Irlande*, tom. iii. p. 754. See also *Newenham on the Population of Ireland*, p. 60.

such proceedings to be tried by none but known Protestants. No Papist was to take more than two apprentices, except in the linen trade. Papists were prohibited from being on grand juries, and from having arms. In trials on any statute for strengthening the Protestant interest, the plaintiff might challenge a Papist, which challenge the judge must allow. Papists were to find Protestant substitutes for the militia, and to pay double. They were prohibited from being high or petty constables. Barristers and solicitors marrying Papists were to be subject to all the penalties on Papists; marriages between Protestants and Papists, or those celebrated by Popish priests, were annulled. Popish priests celebrating marriages between Protestants and Catholics were to be punished capitally.

Such are the principal provisions of the anti-Catholic penal code, one of the most atrocious systems of persecution and tyranny ever established in any country. In his letter to Sir Hercules Langrishe, Mr. Burke says, "The laws made in this kingdom (Ireland) against Papists were as bloody as any of those that had been enacted by the Popish princes and states; and when these laws were not bloody they were worse; they were slow, cruel, outrageous in their nature, and kept men alive only to insult in their persons every one of the rights and feelings of humanity. \* \* \* You abhorred this code, as I did, for its vicious perfection. For I must do it justice. It was a complete system, full of coherence and consistency; well digested and well composed in all its parts. It was a machine of wise and elaborate contrivance; and as well fitted for the oppression, impoverishment, and degradation of the people, and the debasement in them of human nature itself, as ever proceeded from the perverted ingenuity of man."

The spirit in which this code was acted upon may be inferred from the circumstance that, in 1708, on the mere rumour of an intended invasion of Scotland by the Pretender, forty-one Roman Catholic noblemen and gentlemen were imprisoned in Dublin Castle. About the same period the House of Commons denounced the custom, continued from a very remote period, of infirm people making an annual pilgrimage to St. John's Well, in the county of Meath, as dangerous to her Majesty's government. This vote was followed by others, declaring that those who did not give information of their knowledge of the saying and hearing of mass, under circumstances contrary to law, were enemies to the queen, and that the *prosecuting and informing against Papists was an honourable service to the government!* In 1733 the plan of establishing schools for the reception of children of the poorer classes, especially Catholics, in the view of educating them in the Protestant faith, was set on foot as an infallible means for the speedy extirpation of the Catholic religion. This device, however, though more ingenious and better fitted to attain its end, was as unsuccessful as the others. It may be worth while to mention that the schools in question, since known by the name of charter schools, have only lately ceased to be objects of public patronage and support. Several enumerations of the population were also made at different times in the view of ascertaining the proportion between the two great divisions of the nation.

While the dominant party was thus engaged in attempts to exter-

minate the Catholic religion, its efforts to maintain a position of legislative independence with respect to the English parliament were comparatively desultory and feeble. It succeeded, in 1724, being backed by the public voice, in preventing the introduction of a copper coinage, then much wanted, proposed by Mr. William Wood, who had procured a patent for the purpose. The affair assumed a character of national interest through the opposition of Swift; but the English government, having wisely yielded to the public feeling, and cancelled the patent, the irritation soon subsided. A dispute, in 1747, about an election to the mayoralty of Dublin, and an Act of the English government by which it disposed of a small redundancy of the supplies contrary to the will of the Irish House of Commons, were almost the only political questions worth any notice that occurred during the reign of George II. The effects of the change from tillage to pasturage, which took place during this period, having begun to be felt, an Act was passed, in 1730, at the instigation of Primate Boulter, the great supporter of the British interest in his day, compelling all landholders to keep five acres, out of every hundred in their possession, in tillage. The Irish parliament also directed its attention to the promotion of public works, of which inland navigation was then deemed the most important, and the legislative provisions and parliamentary grants for its promotion gave rise to the canals now in existence. We have elsewhere noticed the suppression of the woollen manufacture (vol. i., p. 667) by the parliament of England, and the encouragement given to the Irish linen trade. The Irish parliament was mean enough not only to acquiesce in the arrangement, but to sanction it by special enactments. The linen manufacture took root only in the northern or Protestant districts of Ireland; and as the woollen had been long the staple of the south and west, its destruction most probably helped to promote the Catholic emigration, which at this period abstracted much of the national property and industry. In addition to the linen manufacture, that of silk was also introduced: being supported by the Irish Court, and aided by the invention of a new and beautiful fabric, in which woollen yarn was blended with silk, it had some small success; but it never made any considerable progress or became of any importance.

During the two invasions with which England was disturbed in the first half of the eighteenth century Ireland continued tranquil. It would be childish, and an insult to the Catholics, to suppose that they were really attached to a government which had reduced them to a state of helotism, and which treated them as its most dangerous enemies.\* But they were without power, dispirited, and politically extinct. Hence the otherwise inexplicable fact that there is no evidence to warrant a suspicion that, in the rebellions of 1715 and 1745, any intercourse was maintained between the Irish Catholics and the partisans of the Pretender in Scotland. The great Lord Chesterfield, lord lieutenant of Ireland during the latter of these rebellions, so far from deeming any further restrictive measures neces-

\* Mr. Plowden talks of the "stern loyalty" of the Irish Catholics of that day to the House of Hanover! (*Hist. of Ireland*, i. 75.) If the fact were so, it would do more than anything else to vindicate the policy of the penal laws.

sary against the Catholics, treated their leaders with kindness, and, in practice at least, relaxed the rigour of the penal laws. At a later period, on the apprehension of a French invasion in 1759, followed by the landing of a partisan force under Thurot at Carrickfergus, the Catholic Committee of Dublin, a body formed about two years before to procure a relaxation of the penal code, influenced partly, it may be presumed, by a feeling that they were about to be relieved of their more oppressive disabilities, and partly, no doubt, by a wish to recommend themselves, presented an address to the lord lieutenant declaratory of their allegiance and loyalty to the government; and at the same time several wealthy Catholics came forward with offers, if needed, of large sums for the public service.

Two circumstances, apparently trifling, but ultimately leading to important results, mark the close of the period extending from the Revolution down to 1768. Their details, however, belong more appropriately to the general view of the Irish constitution; so that it will be sufficient here merely to state the facts. The one was the permanent residence of the viceroy, who had hitherto visited the country but once every two years; the other was the change effected, in 1767, from parliaments terminating only on the demise of the Crown to those limited to eight years' duration. But though popular this act was of no real utility, and tended, in fact, rather to increase than to diminish the corruption of the parliament. An important change began, however, to take place about this period in the opinions of the Protestants, or Anglo-Irish party, who were disgusted by the assumption of supreme authority by the parliament of England, by the circumstance of most offices of power and emolument being conferred on Englishmen, and by the shackles imposed on the trade and industry of the country. The incipient spirit of agitation in the transatlantic colonies was another and a most active element in effecting the great changes of political feeling and action that mark the interval between 1768 and the Union. The progress of the change was accelerated by the rupture between Great Britain and her colonies. The warning given by Thurot's attempt might have opened the eyes of the English government to the facilities for invading Ireland. But in the struggle for the maintenance of long-established dominion by Great Britain, and of newly-proclaimed independence by America, Ireland was drained of its troops; and on an alarm of invasion from France, the answer by the viceroy to an application for military protection was, "that the government had none to give; and that the people must look to themselves for the means of defence." This hint was sufficient. The military spirit, engrafted in the Irish by centuries of internal commotion, found, in consequence, a legitimate vent. It was encouraged by government, who issued arms to a numerous corps of self-embodied volunteers, principally formed in Ulster; while, at the same time, it took care that the guidance of this formidable body should devolve upon individuals who, though of popular political sentiments, were bound to the existing order of things by the tie of large territorial possessions. The people, or rather the Protestants, becoming, in this way, aware of their power, immediately began to look for a release from the shackles which had paralysed their energies.

The restrictions on their trade, which were little less injurious to England than to Ireland, were the first objects of their attack; and they happily succeeded in effecting their abolition. Emboldened by their success in thus shaking off the fetters imposed on the industry of their country, the Irish party took the most vigorous measures for establishing its independence. In this view resolutions were agreed to by the volunteers at Dungannon in 1782, and by other public bodies, declaring Ireland to be "a free and independent kingdom, and that no power on earth, except that of the king, lords, and commons of Ireland, could legally enact laws to bind Irishmen." These declarations, which struck a direct blow at the superiority hitherto claimed and asserted by the British parliament, might, and most probably would, at another time, have been successfully resisted. But Great Britain, being then engaged in a desperate contest with her revolted colonies, and with almost all the great European powers, prudently made the concession demanded by the Irish volunteers; and the *independence of Ireland* was proclaimed amid the most enthusiastic demonstrations of popular rejoicing.

In truth and reality, however, this triumph was little more than apparent. The representative system of Ireland was in the last degree corrupt and vicious; and though it had been otherwise, she was not in a situation to have returned an independent House of Commons equal to the task of self-government. The leaders of the volunteers were alive to the defective state of the representation; and subsequently to the recognition of the independence of the kingdom, a convention of delegates from the various volunteer corps was held at Dublin in 1783, for the purpose of conveying to the legislature the call of the people for a reform of parliament. A bill, intended to effect that object, prepared by the delegates, having been introduced into the House of Commons by Mr. Flood, was rejected, after a very warm debate, by a large majority, on the justifiable ground of its having emanated from an armed body. The convention adjourned next day, and did not re-assemble. The spirit of volunteering henceforth declined. The restoration of peace rendered the services of the volunteers unnecessary; they were regarded by the government, and by many sincere friends of liberty, with extreme suspicion; and the irreconcilable differences of opinion that prevailed amongst them in regard to the treatment of the Catholics, produced a schism which facilitated the suppression of the volunteer system.

The formation of a committee to devise measures for the relaxation of the penal code has been already noticed; and after the experience of three quarters of a century had shown that that code was as inefficient for the purposes for which it was intended as it was oppressive and revolting, it began to be regarded in its true light by the more liberal and intelligent Protestants, and its more obnoxious and insulting provisions were consequently abolished. In 1774 an Act was passed authorizing his Majesty's subjects, of whatever persuasion, to testify their allegiance to him. By subsequent Acts Papists were allowed to hold lands on lease for 999 years, or for five lives; and on taking a prescribed oath of allegiance, they might purchase lands and dispose of them by will, or otherwise, at pleasure; ecclesiastics, on registering

their name and abode, were discharged from all penalties, a privilege which was, at the same time, extended to schoolmasters. But the principal relief was not given till 1793, when the laws subjecting Papists, or persons marrying Papists, or educating their children as such, to the disabilities already stated, were repealed; and when, also, Papists were admitted to the exercise of the elective franchise.

While the Catholics of the higher orders, under the guidance of their committee, were thus unrivetting link by link the shackles of the penal code, the lower classes were employing more summary and less justifiable methods for relieving themselves from the grievances that more immediately pressed upon them. Their chief causes of complaint were rack-rents, and the exactions of tithe proctors, who farmed the tithes of the Protestant incumbents, and exacted them with the utmost rigour from the cultivators. The tithe, which, being employed to support a Protestant establishment, is most unpalatable to the Catholic occupiers, was rendered still more unpopular by a resolution of the House of Commons, in 1735, exempting pasture lands from its payment; and which, consequently, made it be levied with greater strictness from the potatoes and corn raised by the small farmer. The people in the southern and western counties assembled in large bodies to prevent, by summary acts of outrage, the levy of tithe or the payment of rack-rents. They obtained the name of White-boys from wearing shirts over their clothes, that they might know each other during night. Sanguinary laws were enacted to suppress these associations, notwithstanding which they extended to the northern counties, where the associates were known by the names of Hearts of Oak, Hearts of Steel, Peep-of-day Boys, and Defenders.

The state of the elective franchise in Ireland was totally inconsistent with anything like real independence. "Two-thirds of the members of the House of Commons were returned with the mere farce of an election by wretched tenants of the aristocracy." (*Hallam, Const. Hist.* iii., 510.) And so venal was the parliament, that any minister, how unpopular soever, had little difficulty in securing a majority. Hence the anticipations in which Grattan and other Irish patriots had indulged, on the recognition of the independence of Ireland, were destined to experience a mortifying disappointment. The efforts of the volunteers to effect a reform of the representation having, as previously seen, totally failed, the hopeless task of impressing a sense of its corruption on the corrupt body was undertaken by the Whig Club. But its efforts being equally unavailing, this ill success, and the hopes inspired by the French Revolution, stimulated the more sanguine of the popular party to adopt violent measures. In this view they instituted the society of United Irishmen, bound together by oaths, and communicating by secret signs. It is doubtful whether this society was originally actuated by rebellious motives, whatever may have been the case with some of its leaders, or whether it was merely impelled by an ardent wish to obtain a reform of the representative system, and the total abolition of the disabilities affecting the Catholics. But the attempts to effect these objects by legal means having been defeated, the society, despairing of any better success in future, impatient of further delay, and urged on by the example

and the agents of France, determined to raise the standard of revolt, and to attempt to establish a republic in Ireland! They carried on their projects with so much vigour and secrecy that they had embodied upwards of 100,000 men before the extent of the conspiracy was fully known to government, and had also prevailed upon the French government to fit out a considerable armament for their support; but this armament after lying in Bantry Bay for a few days in the winter of 1796, was forced to return home by stress of weather. Disappointed in this hope, and goaded on by the increased severity of government, the United Irishmen rose in open rebellion in 1798. The insurrection raged most violently in the counties of Wexford, Wicklow, Down, and Antrim; but the rebels made no efficient resistance; and were soon put down, though with great loss of life, the destruction of much property, and the perpetration of many enormities.

The proceedings in 1783 and 1784, and the outbreak of the rebellion, set in the strongest light the necessity for a legislative union between Great Britain and Ireland; and the suppression of the latter gave a favourable opportunity for bringing it forward. But though its policy be too obvious to be insisted upon, though Molyneux viewed it as "a happiness hardly to be hoped for,"\* and Montesquieu considered it as essential to the prosperity and good government of Ireland,† the Union was strenuously opposed. Luckily, however, the opposition was overcome; and having been accomplished, it took effect from the 1st of January, 1800. Unless, indeed, it were wished to put an end to all political connexion between the two countries, nothing could be more anomalous and absurd than the existence of a separate and independent legislature in Ireland. Jealousies and disputes must have been perpetually arising between it and the legislature of Great Britain, which must necessarily have led to the estrangement of the two countries, and, most probably, in the end to their separation, or to the complete subjugation and military occupation of Ireland. The Union was indispensable to the peaceable consolidation of the British empire, and more especially to the tranquillity and improvement of Ireland; and should, therefore, be considered, like the Bill of Rights, or the Act of Settlement, as fundamental and inviolable.‡

Hopes were held out to the Catholics that the total repeal of the penal laws, would be facilitated by the Union. At first, however, they were disappointed. The introduction of the question into the Imperial Parliament occasioned a change of ministry, and the adoption of severe measures, though not more so, perhaps, than necessary, towards Ireland. In 1803 an insane attempt at insurrection broke out in Dublin, which was suppressed, with the loss of a few lives, on the night in which it commenced; and a similar attempt in Down had a similar termination. The continued rejection of the Catholic petition in the Imperial Parliament, before which it was

\* *Case of Ireland, &c.* p. 98, ed. Dublin, 1698.

† *Hardy's Life of Lord Charlemont*, i. 70.

‡ It is not, as the apologists of the Irish anti-union demagogues affect to believe, the same thing to agitate for a repeal of the Act of Union, and of any other Act. Men of sense look to the consequences of their conduct, and do not regard the dismemberment of the empire, and the repeal of a Turnpike Act as identical.

almost annually brought forward, eventually led to a new organisation of the Catholics of Ireland, under the name of the Catholic Association. Mr. Daniel O'Connell, remarkable for his wary boldness, political dexterity, and thorough knowledge of the Irish character, originated and directed this body. Its distinguishing features were, the admission of the whole Catholic population, on payment of a penny a month per head under the name of "rent;" an adherence to the letter of the law, however adverse or oppressive; and a determination to vote at elections against every candidate not pledged to support the Catholic question, whatever might be his other claims to popular favour. A counter association was subsequently formed by the more intolerant portion of the Protestants, under the name of the Brunswick Club; while another portion of the Protestants, favourable to Catholic Emancipation, formed a third association, under the name of The Friends of Civil and Religious Liberty. The anticipated conflict of these powerful bodies, thus marshalled for and against a question of so much interest, was prevented by the unexpected, but wise and statesman-like, declaration of the Duke of Wellington, then Prime Minister, of the expediency, and, indeed, necessity of conceding the Catholic claims. Emancipation followed, of course; and was itself rapidly followed by the Reform Act. And this, again, was soon after followed by the reform of the corporations; by a modification of the church establishment; by a reduction in the assessment on account of tithe, and a change in the mode of its payment, which has stripped it of more than half its bad qualities; and by the introduction of a modified system of poor laws.

But despite these measures, despite the adoption of a fair and liberal system of government, and despite the extraordinary favour shown to Ireland in respect of taxation, she continues to be a prey to innumerable disorders, and appears to be about as dissatisfied as ever! Her prædial sufferings have not been materially alleviated, and she is still rife with political agitation. The last has been found to be too prolific of power and emolument to be readily abandoned. Though the emancipation of the Catholics in law and in fact has been accomplished, and though they are now equally with Protestants admitted to the highest offices of the State, agitation has not abated. And it is to be observed, that this more recent agitation is not directed against the Irish church, or the supposed abuses connected with the letting of land, or absenteeism, or other real or imaginary grievance, but has taken the Repeal of the Union for a theme! And for years past a tribute has been collected; a sort of mock parliament has sat in Conciliation (!) Hall in Dublin; "monster meetings," with thousands of men marshalled in military array, have been held in the provinces; priests have issued manifestoes; poets have contributed anti-Saxon ballads; and every means that a real or simulated hatred of England, and the most unscrupulous mendacity could suggest, have been put in motion to advance this unattainable and suicidal project. An agitation for such an object could not have been got up in any other country; and nowhere else would it have been permitted for years to disturb the public tranquillity and to thwart every effort at improvement. It is probable, indeed, that in no very lengthened period the delusion will die away of its own accord,

and that its originators having effected their own ends, will pronounce Repeal impracticable; leaving their less cautious and more conscientious dupes, to extricate themselves as they best may, from the serious difficulties in which they may happen to be entangled. But we incline to think that measures should have been adopted to suppress the anti-Union agitation; and that, if nothing else would, a law should have been framed to shut the mouths and obstruct the schemes of those, whose proceedings, whether their views be selfish or factious, or merely absurd, involve the immediate disruption of the legislative connexion between the two great divisions of the United Kingdom, and its eventual dismemberment.

#### SECT. 2.—*Constitution of Ireland.*

The constitution of Ireland is modelled on that of England; but, as already seen, for a lengthened period, the native Irish, comprising the great bulk of the population, were excluded from all participation in its benefits, and were, in fact, reduced to a state of bondage. This conduct, it is needless to add, was little less injurious to the conquerors than to the conquered. "As the English would neither in peace govern the Irish by the law, nor could in war root them out by the sword, they needs became pricks in their eyes and thorns in their sides." But nations are slow and reluctant learners; and that selfish short-sighted policy, whose effects were thus forcibly exposed by Sir John Davis (*Discoverie, &c.*, p. 120, ed. 1747) in the reign of James I., flourished in its full vigour down almost to our own times.

Henry II., during his short residence in Dublin, introduced the germs of English law, by granting charters to Dublin and the other leading towns which acknowledged his rule. His example was followed by his son John, who came over during his father's lifetime as Lord of Ireland; and who, on a second visit, after his accession to the throne of England, divided the country into counties, increased the number of chartered towns, erected courts of law and equity, and appointed justices, bailiffs, and other subordinate officers, according to the forms recognised in England. These institutions, however, extended only to the parts of the island subject to the English. The remainder was held by the Irish kings and dynasts, according to the rules of their native law. These were now considered each as sovereign in his own territory, but tributary to the King of England. Roderic, King of Ireland, at the period of the invasion, did homage and swore fealty by his proxies to Henry, a year or two after that monarch's departure: and resigned by deed the sovereignty of certain districts, that he might quietly enjoy the remainder of his dominions. This vassalage of the Irish is recognised in the writs emanating from the English Crown during this period, which are directed to the archbishops, bishops, kings, earls, &c. Another point deserving of attention in investigating the origin of the Anglo-Irish constitution is, that in all the delegations of royal authority the paramount sovereignty of the English Crown is expressly reserved. When John was sent over by Henry II., with powers otherwise unlimited, there was a saving in his patent of the rights which pertain to the Crown. A similar grant of delegated authority from Henry III. to his son Edward has also

the saving clause, that Ireland be never separated from the Crown of England. The recognition of these rights was facilitated by the co-operation of the clergy. A council held at Cashel, in which the Bishop of Lismore presided, as legate from the Pope, decreed a uniformity of religious doctrine and discipline with the church of England, then in communion with the church of Rome.

The period at which the parliament of Ireland assumed its character of an assembly of lords spiritual and temporal, in one house, and of knights, citizens, and burgesses, in another, is uncertain. Sir John Davis says, "that the High Court of Parliament in Ireland was instituted by Edward II., and that the laws made in the parliament of England were transmitted thither under the great seal of England, to be proclaimed, enrolled, and executed as the laws of the realm." But an Irish Act of 32 Henry VI. expressly affirms "that the liege people of Ireland used to hold parliaments without interruption from the Conquest by the most noble King Henry of England to the present time." This assertion is corroborated by a writ of 38 Henry III., issued by the Queen during his absence on the continent, calling for aid in the war against the King of Castile, who had invaded Gascony. The writ is directed to the archbishops, bishops, abbots, priors, earls, knights, freemen, citizens, and burgesses of Ireland. The earliest extant Act of the Irish parliament is of the 3rd of Edward II.

The difficulty of investigating the history of the Irish parliament during these earlier periods is increased by the circumstance of its being usual for the chief governor, in cases of emergency which could not await the customary forms of parliamentary meetings, to call special assemblies of the magnates or chief nobles. The decrees of these extraordinary bodies, distinguished by the name of *Magna Concilia*, or great councils, having obtained general acquiescence through the influence of their component members, acquired the force of law, and are not always easily distinguished from the Acts of Parliament which had passed through the customary legislative processes during the periods anterior to the existence of regular rolls of parliamentary enactments.

The limitation of the English law to the districts possessed by the English settlers and their descendants, led to that most calamitous system of government, an *imperium in imperio*, whence most part of the subsequent disasters of the country may be deduced. That the system of English government and jurisprudence, however novel and complicated, was not uncongenial to the feelings and wishes of the Irish people would seem to be established by the fact that, as early as the reign of Edward I., the Irish made an offer to that King of a contribution of 8,000 marks to be admitted to the benefits of the English law. On this proposal being transmitted to the King's lieutenant, to be laid before the parliament of Ireland, it was rejected by the Anglo-Irish nobility, who conceived that their influence would be weakened and their power contracted by the participation of the Irish in their laws. A second application of the same kind met with a similar fate. In consequence, the spirit of hostility between the two great divisions of the population, the native Irish and the descend-

ants of the English settlers, gradually scattered its seeds and spread its roots on all sides till their eradication became all but impossible. The English considered the Irish not as strangers merely, but as enemies, admissible to English protection solely as matter of favour, by special writ, which had been conferred on five only of the great Irish families. The Irish in turn retaliated upon the invaders by desultory aggressions upon life and property, which in the more depressed periods of the English government were warded off, not by force of arms, but by the payment of a stipulated annual tribute, known in Ireland, as in the Highlands, by the name of Black Mail.

The chief governor, who bore the title successively of justiciary, custos or warden, lord lieutenant, and lord justice, was vested, in the earlier period of the English ascendancy, with very extensive powers. He was authorised to appoint a lord deputy during his occasional absence; to convoke, prorogue, and dissolve parliaments; and to pass, if he thought fit, such laws as they might enact, without communicating with England. His military authority was equally extensive; and he might summon all the King's subjects to attend him, both in his musters against revolted subjects or enemies, and in his progresses of a more peaceful nature throughout the country.

The parliaments of Ireland possessed at all times, and more especially in these days, little of the spirit or influence that is now usually supposed to belong to such assemblies. They were the slaves of faction, or rather its impersonation, and were actuated in every case by the narrowest and most selfish views, without once thinking or caring about the public interests. "They oppressed," says Leland, "the king's subjects by taxes repeatedly imposed, and by subsidies exacted at the pleasure of rapacious governors." (*Hist. Ireland*, ii. 512.) The times of their meetings, as well as their proceedings, were fluctuating and arbitrary, being sometimes held three or four times in the course of a single year! And though attempts were made to obviate this as well as other abuses, it continued till the reign of Henry VII. Hence the inability of the parliament and government of Ireland to establish anything like tranquillity and good order. This was so sensibly felt during the disastrous period that followed the invasion of Edward Bruce, that Edward III., despairing of being otherwise able to put down the abuses and disorders that everywhere prevailed, summoned the lords and commons of Ireland to meet him in his parliament in England. But this summons being obeyed by few only, Ireland continued in a state of anarchy; and during the reign of Richard II. the authority of England was reduced to a very low ebb.

This result was in part, at least, owing to measures of the English government in the reign of Edward III. of a very different character from that now alluded to. To increase and strengthen the dependence of the Irish government on England, it was ordered that all public officers, whose property was wholly in Ireland, should be removed, and their places supplied by others, born in England and possessed of property there. This unjust and impolitic regulation gave rise to a new distinction among the settlers—that of English by blood and English by birth. Its immediate effect was the assembling of a

Parliament of the discontented party in Kilkenny, in opposition to the Lord Lieutenant's Parliament convoked in Dublin. To close this schism the King sent over his son Lionel, Duke of Clarence. His first act widened the breach. Surrounded on his arrival by followers of English birth, he issued a proclamation prohibiting any of the old English, or of the King's subjects of Irish birth, from approaching his camp. After a short and disastrous stay he was recalled. He returned, however, a few years after; and a parliament convened, under his auspices, at Kilkenny, in 1367, was prevailed upon to pass a statute, which after reciting that the English established in Ireland had so far degenerated as to become mere Irish in their language, dress, customs, &c., goes on to enact that marriage or fostering with the Irish, furnishing them with victuals in time of war, or with horses or armour at any time, should be held to be treason, or at least to involve the forfeiture of their lands. It prohibits the use of Irish names, language, apparel, or modes of riding by the English, and of the Irish language by the Irish resident among the English. It declares that the Irish, of Irish lineage, shall not be admissible to any cathedral, nor to any ecclesiastical benefice among the English, nor to profession in religious houses there, and prohibits Irish agents, under the names of "pipers, babblers, rhymers," &c. from being received among them.

This statute completely severed any remaining links of amity between the English and Irish. It declared expressly that the latter were irreclaimable. From this period the English power rapidly declined. The *Pale* comprised only a few counties, and the proceedings of the parliament representing so small a part of the island were nugatory. At this time, though Dublin was the more usual place for legislative assemblies, they were frequently held elsewhere. There were numerous sessions at Drogheda. Trim, Kilkenny, and Castledermot were also places for those meetings. The public records notice a sessions at the petty town of Bray. In the beginning of the reign of Henry VII., when the authority of England was at its lowest point, the Irish Parliament, as previously stated, declared the impostor, Lambert Simnel, King of Ireland, by the title of Edward VI., and enacted severe laws against those who refused to recognise his right. Henry, to prevent the recurrence of such a circumstance, sent over Sir Edward Poynings as Lord Deputy, accompanied by several English officers of acknowledged ability. Through his influence two statutes were passed, in 1495, which totally changed the character of the Irish Parliament. The one was for the adoption of all the statutes lately made in England; a law not novel in its provisions, and confirming rather than trenching on the rights of the Irish legislature, by virtually recognising the necessity of the ratification of an English statute by it in order to give it the force of law. The other, since well known in Irish history by the name of "Poynings' Law," made effectual provision for maintaining the ascendancy of the government of England over the legislature of Ireland. With this view it was enacted, that no Parliament should in future be held in Ireland without license from the King; and that no bill or draft of a law should be submitted to its consideration, without having been previously sent over to England by the Irish Govern-

ment for the approval, alteration, or rejection of the King ; so that the power of the Irish Parliament was thus, in fact, limited to the mere acceptance or rejection of bills approved or modified by the English Government.

This Act was much and justly complained of at a later period ; but, when passed, it was a judicious and a deservedly popular measure. Parliaments had previously been, for the most part, the mere instruments of the faction that happened to be ascendant at the time ; so that their enactments were often conflicting, and the administration wanted vigour and consistency. Poyning's law obviated, to a considerable extent, these defects ; and Parliament henceforth became dependent rather on the government of England than on any particular faction or party in Ireland.

Henry VIII. assumed the new titles of King of Ireland and Supreme Head of the Church. The former was received with immediate acquiescence, the latter was for some time obstinately resisted ; but, at length, it also was acknowledged, chiefly through the relaxation of the statute of Kilkenny ; in consequence of which the principal chieftains, who had hitherto disclaimed any subordination, returned to their tributary state, and accepted pensions in lieu of black mail. The chief of those refractory lords, the Earl of Desmond, though at first he insisted on retaining the privilege enjoyed by his ancestors of not entering any walled town out of his own jurisdiction, at length became a liege subject, and attended as a lord of parliament.

In the reign of Elizabeth, the Catholic Church of Ireland was subverted, and the Protestant Church of England established on its ruins. But the religion of the bulk of the people was not influenced by the change. The doctrines of the Reformation have made no progress in Ireland ; which, since this unhappy period, has had an establishment without a people, and a people without an establishment. A new and most potent element of discord was thus unluckily added to those already existing in Ireland, which has continued to exert a most baleful influence down to the present moment.

The chief change in the numbers and constitution of the House of Commons was effected by James I., who, on his settlement of Ulster, established a number of boroughs authorised to send representatives to Parliament. But their members, from their insignificance, and the confined mode of their election, were the mere nominees of noblemen or gentlemen in their vicinage, over whom the Crown could usually exercise, either directly or indirectly, an overpowering influence. The Parliament convoked in 1613, is generally considered as the first in which the whole of Ireland was represented. What had been previously dignified by this name was, in reality, the Parliament of the *Pale*, a colonial Assembly, composed of the lords and commons of from four to ten or twelve counties. That now convened consisted of 232 members, at the rate of two for each of the thirty-two counties, the remainder being for cities, towns, and boroughs. Its first meeting opened with a contest between the Protestant and Catholic parties, in regard to the election of a speaker. The Protestant party had the majority, and placed their candidate in the speaker's chair ; this, however, did not put an end to the contest, which was

terminated only by the secession of the minority. During this reign the Commons endeavoured to modify the operation of Poynings' Law, by claiming to be remembrancers to the Privy Council of such laws as were fit to be propounded; and after the fall of Strafford they asserted and established the right of preparing heads of bills to be presented to the chief governor and council for transmission to England.

The mode of passing laws, from this time till 1782, was as follows:—The subject was brought into either house in the form of heads of a bill, under which name it was discussed. If approved of, it was sent to the chief governor and Privy Council, who either certified it to England, without or with alteration, or suppressed it. If, when sent, it was returned, or, as it was styled, transmitted without alteration, then it passed in the shape of a bill through the house in which it had originated, was forwarded to the other house, and, if approved of there, it passed into a law by receiving the royal assent from the throne by the Lord Lieutenant. But if the bill came back from England altered, it was usual either to reject it altogether or to frame anew the heads of a bill in compliance with such alterations, and to transmit them as above.

Cromwell, with that sagacity which distinguished all his proceedings, revived, during his protectorate, the attempt made by Edward III., to have Ireland represented in the English Parliament. The number of members to be sent over was fixed at thirty; but unfortunately the project was not carried into execution.

James II., after his abdication, held a Parliament in Ireland, which passed a number of laws; some for the reversal of attainders in the two preceding reigns, others for purposes of public utility. These were all cancelled after the Revolution; and the entries of grants of dignities, offices, and lands, made under James's government, were erased from the records.

The constitution of Ireland, after the Restoration, is marked by two peculiar characteristics. The members of the House of Commons held their seats, not by septennial election, as in Great Britain, but during the lifetime of the sovereign. Their tenure was, therefore, regarded as tantamount to a life estate, subject only to a dissolution on the King's demise. The Lord Lieutenant visited Ireland but once in two years to hold a Parliament and obtain supplies. The government, in the interval, was intrusted to three lords justices, one of whom was either the Lord Chancellor or primate, both of which officers were always Englishmen; the other two being selected from among the most powerful of the great Protestant families. The influence of the latter was often employed to thwart the measures of the British Cabinet, in questions wherein the interests of the two countries were supposed to be at variance, particularly when such measures interfered with the aggrandisement of the parties. The question of the right of the British legislature to control that of Ireland was one of those mooted points; and Mr. Molyneux, member for the University of Dublin, and the friend of Locke, published, in 1698, a learned and able essay,\* to prove that the Parliament of England had no

\* *Case of Ireland being bound by Acts of Parliament in England, stated, 8vo. Dublin, 1698.*

right to make laws to bind the King and people of Ireland. The English Commons took fire at what they deemed an attack upon their privileges. In an address to the King they protested against a doctrine fraught with such alarming consequences, and ordered the book to be burned by the common hangman. The question thus set at rest for the moment was revived a few years after. The English House of Lords having reversed a judicial decree made by that of Ireland, its decision was stubbornly resisted. The dispute was cut short for the time by an Act of the English Parliament, declaring it had full power and authority to bind the people of Ireland, and further asserting that the peers of Ireland had no jurisdiction to affirm or reverse any judgment or decree whatever. The Irish Commons, by their silence, appeared to acquiesce in this declaration. The peers asserted their right of appellate jurisdiction in an address to the King, of which, however, no notice was taken. It is a singular fact, that, while this contest was at its height, the English Parliament exercised the right without dispute and almost without notice, and that, too, on a point vitally affecting the interests of Ireland. Catholics sat in Parliament during the reign of Charles II. The Revolution made no change in the law in this respect. Their right still continued unimpaired. An English Act of the 3rd of William and Mary required all the members of both houses to take the oath of supremacy. This Act, according to Irish constitutional ideas, was not binding in Ireland; but the Commons took no notice of this infringement of their rights. The Catholics submitted to it passively, and, under warrant of this dubious and, in other cases, disputed authority, they acquiesced in their own exclusion, during a period of upwards of eighty years, or until all doubt was removed by the Irish Act of the 21st and 22nd George III., which excluded them in express terms.

The Irish Government was at this time nearly independent of Parliament. A statute of Charles II. had settled an hereditary revenue on the Crown; which was in effect, as far as it went, a perpetual money bill. The supplies required for extraordinary purposes were granted biennially at the meeting of Parliament. The Government, desirous of freeing itself from even this slight check, brought in a Bill for granting the supplies for twenty-one years. A desperate struggle took place on the question, between the partisans of Government and those members of the House of Commons who wished to retain their own influence by retaining the right to withhold the supplies. The latter party triumphed; the Appropriation Bill being thrown out by a majority of ONE.

Another dispute between the Government and the House of Commons emanated from the same source. A surplus revenue, to a small amount, arising from the biennial supplies, remained in the exchequer. The English Council insisted on the King's right to its disposal; while the Commons insisted on their absolute control over the public purse. The former endeavoured to steer a middle course. A message was sent from the King, signifying his previous consent that the moneys in question should be applied to certain public purposes. The Commons protested against this right of previous consent, and rejected the Bill containing the obnoxious expressions. Meantime the

English Council drew the moneys out of the exchequer by the King's letter, and the Commons again acquiesced in silence.

The situation of the English Government in Ireland was, at this time, irksome and invidious. To carry on the public business with ease and expedition, it was necessary to conciliate the great landed proprietors, who, in consequence of the preponderance of the members for close boroughs over those for counties and open corporations, were virtually masters of the House of Commons. The party which thus ruled the country, by playing the British Government and the Irish people against each other, was known by the name of the Undertakers. It had a double object; the one, to make the Crown dependent on itself, as far as Ireland was concerned; the other, to check the spirit of liberty in the people, and at the same time to throw upon the Government the odium of measures of which it was really the instigator.

To break down this petty aristocracy, the British Cabinet, in the early part of the reign of George III, resolved that the Lord Lieutenant should reside permanently in Dublin; thus superseding the intermediate agency of the lords justices, and so far neutralising the influence of the party out of which they had been selected. It also, as previously stated, changed the duration of Parliament; making it, instead of perpetual during the King's life, octennial, so as to allow the holding of four biennial sessions during its continuance. These new arrangements added considerably to the power of the popular party in Parliament. The Undertakers were shorn of much of their influence by being deprived of the distribution of places and pensions, now exclusively at the disposal of the Lord Lieutenant; and they were obliged to pay some deference to public opinion, in consequence of the increased frequency of general elections.

We have already noticed the circumstances which led to the repeal of the restrictions on the trade of Ireland, and to the renunciation by the British Parliament of the right to legislate for that kingdom. This was embodied in the British Act, the 23rd Geo. III., c. 28, which declared, "that the right claimed by the people of Ireland to be bound only by laws enacted by His Majesty and the Parliament of that kingdom, and to have all actions and suits at law and in equity which may be instituted in that kingdom finally decided in the courts therein, and without appeal from thence, is established and ascertained for ever, and shall at no time hereafter be questioned." This arrangement, which took place in 1783, went by the name of the Final Adjustment. Acts were passed at the same time to prevent the suppression of Bills by the Irish Privy Council in their progress to England, and their alteration anywhere, and to limit the powers of the Mutiny Bill to two years.

According to these new regulations, the mode of passing Bills was as follows:—The Chief Governor and Council certified to the King without addition, diminution, or alteration, all such Bills, and none others, as both Houses judged expedient to be enacted. All Bills so certified and returned under the Great Seal of England, without addition, diminution, or alteration, and none other, were to pass in the Irish Parliament. No Bill was to be certified into England as a cause

for holding a Parliament; but no Parliament was to be holden without licence first had from the King under the Great Seal of England.

The "final adjustment" did not, however, as might easily have been anticipated, set to rest all differences as to subjects of international policy. The mental derangement of George III., in 1789, gave rise to a question of constitutional importance. It was deemed necessary to appoint a regency. The Prince of Wales, the heir-apparent to the throne, was chosen Regent by the British Parliament, but with restrictions; whereas the Irish Parliament offered him the regency with all the powers of a ruling monarch; so that had the King's illness continued, the Prince would have held the reins of government in each kingdom by a different tenure. The restoration of the Sovereign's health silenced a question, of which the Union prevented the revival. But the circumstance strongly exhibited the serious dangers to the public peace, that could not fail to arise from the same kingdom having two separate and independent legislatures.

The great measure of restoring the Catholics to the enjoyment of the elective franchise, of which they had been so long and so unjustly deprived, was carried through parliament, in 1793, against the conviction of the majority of its members, by means of the influence of the English government. The concluding chapter of the history of Ireland, as a separate kingdom, followed close upon the adoption of this measure. In 1799, a legislative union, incorporating the Parliaments of the two great insular divisions of the British empire, happily became the law of the land, after a parliamentary struggle, in which bribes, promises, and threats played the same part they had done in the case of the union with Scotland in the early part of the century.

The leading provisions of this Act are:—1. The permanent union of the two kingdoms into one, under the title of the United Kingdom of Great Britain and Ireland. 2. The succession to the throne to continue limited as before. 3. The kingdom to be represented in one Parliament, to be styled the Parliament of the United Kingdom of Great Britain and Ireland. 4. Twenty-eight temporal peers, elected for life, and four spiritual peers, succeeding each other in a rotation of sessions, to be admitted into the House of Lords; and one hundred representatives, two for each county, two for each of the cities of Dublin and Cork, one for Dublin University, and one for each of thirty-one towns and boroughs, to be elected into the lower house. 5. The churches of England and Ireland to be united under the name of the United Church of Great Britain and Ireland; the doctrine, worship, and discipline of which to be the same as that established for the church of England. 6. The subjects of both countries to be placed on the same footing as to manufactures, trade, and commerce. 7. The contribution of each portion of the empire towards the general expenditure to be in the proportion of fifteen to two between Great Britain and Ireland for twenty years; and afterwards to be regulated by Parliament. 8. The existing laws and courts of justice to continue as heretofore, except that appeals from the Irish Chancery are to be brought into the House of Lords in England. The royal style was

changed to that of King of the United Kingdom of Great Britain and Ireland. The Act took effect on the first day of the present century.

Two great constitutional changes have taken place since the Union : one occasioned by the Act 10 Geo. IV. c. 7, for removing all the disabilities under which the Roman Catholics laboured, and the other by that for the Reform of the House of Commons.

The former of these statutes enacts that Roman Catholics may vote at elections of members of Parliament for England and Ireland, and for the representative peers of Scotland and Ireland ; and may sit in Parliament, if duly qualified in other respects, on taking an oath prescribed by the Act, by which they promise to maintain the succession to the throne as then limited—abjure allegiance to any other person claiming a right to the crown—renounce the doctrine of the Pope's power to depose excommunicated sovereigns, and of his temporal jurisdiction within the British realm. By this oath they also swear that they will defend the settlement of property as established by law, abjure any intention to subvert the present church establishment, and pledge themselves not to exercise any privilege, acquired by the Act, to disturb or weaken the Protestant religion or Protestant government in the United Kingdom. Roman Catholics may hold any civil or military office, except those of guardian and justice, or Regent of the United Kingdom, Lord Chancellor of Great Britain or Ireland, Lord Lieutenant of Ireland, or High Commissioner to the General Assembly of the Church of Scotland, or any office in the established churches of England, Ireland, or Scotland, in any ecclesiastical court, in any cathedral or collegiate foundation, or in any of the universities. No Roman Catholic in holy orders is allowed to sit in Parliament. The Act contains various clauses respecting Roman Catholic ecclesiastics, but not of any constitutional importance. Together with the Act here noticed, another was simultaneously passed, which repealed the Act qualifying forty-shilling electors to vote for members in counties in Ireland, and limited the right of voting to persons having freeholds of not less than 10*l.* annual value.

The Act for amending the representation of the people of Ireland confers the right of voting in counties on persons holding lands of the clear yearly value of not less than 10*l.* by freehold or any other tenure, for the unexpired residue of any term originally created for not less than sixty years, and of lands of the yearly value of not less than 20*l.* for not less than fourteen years ; renewals or new leases at the same rent, and for a term not less than that originally granted, to be deemed a continuance of qualification. The right of voting is also extended to copyholders. The right of voting in cities and towns is vested in freeholders having a beneficial interest of the clear yearly value of 10*l.*, and such lessees and assignees as might vote for the county, and occupiers as tenants or owners of any house or tenement of the value of 10*l.*, if duly registered, and having been occupiers at least six months previous to registry, and having discharged all grand jury and municipal cesses above one-half year's amount of such cesses. In boroughs it is vested, as in the English Act, in the occupiers of houses or tenements of not less than 10*l.* yearly value, on the condition of twelve

months' previous occupation, residence within seven miles, and payment of all the assessed taxes. Freemen are permitted to vote only so long as they are resident within seven miles of the usual place of election; honorary freemen are disqualified. New boundary lines are prescribed by a subsequent Act for all boroughs entitled to return members, which right is continued as in the Act of Union, with the exception of the cities of Limerick and Waterford, the borough of Belfast, the town of Galway, and the University of Dublin, each of which is to return one member in addition to the member it returned since the Union. The right of voting in the university, hitherto confined to the provost, twenty-five fellows, and seventy scholars, is extended to all who have taken the degree of master of arts, or any higher degree, and to all who have at any time been fellows or scholars, such new electors being required to have their names entered on the college books for this special purpose, and to pay an annual sum of one pound for retaining them there. This new arrangement has increased the number of electors to upwards of 1,300. The principal alterations in the number of representatives for Ireland, in the Irish and Imperial Parliament, have been:—In the reign of Henry VIII. the House of Commons had 100 members; Philip and Mary, 104; Elizabeth, 146; James I., 232; Charles II., 285; James II., 298; Anne, and thence to the Union, 300; in the Imperial Parliament, from the Union to the Reform Act, 100; and since the Reform Act, 105.

The executive is vested in the Lord Lieutenant, who holds office during pleasure, but is generally continued for five years. The extraordinary powers, trenching on the prerogative of royalty, which he formerly exercised, have been gradually lopped off, so that he is now little more than the organ for executing the ordinances of the British cabinet. He still, however, has an establishment of regal character, holds a court, is attended by officers of the household, for the support of which he receives a fixed annual salary of 20,000*l.*, two splendid residences, and several minor emoluments, among which the payment of his household by the Crown is by no means trifling. He is aided in the discharge of his official duties by a privy council, composed of all the great judicial functionaries, and other noblemen and gentlemen, nominated by the Crown. The approbation of this body is essential to give validity to many of the Lord Lieutenant's acts. During his absence, or on his demise, his place is filled by three Lords Justices, who are generally the Lord Chancellor, the Archbishop of Armagh, and the Commander of the Forces. But the powers of government are in reality exercised by the Lord Lieutenant's chief secretary, who is usually a member of the cabinet, and has an establishment of under-secretaries and clerks, in London and Dublin, to execute the details of his office. The charge of each county is given to a lord-lieutenant, aided by a number of deputy lieutenants, all named by the chief governor, and acting gratuitously. Their recommendation has much weight in the appointment of the county magistracy, though their actual nomination be vested in the Lord Chancellor, by whom also they may be superseded. They act without salary. Latterly, a class of stipendiary magistrates has been established, appointed ostensibly to aid the other class, but who, in

reality, perform the greater part of the executive duties, and are looked to by the government as more especially responsible for the preservation of the public peace. Their orders are carried into execution by a well-organised and powerful constabulary force of about ten thousand men, classed under the divisions of inspectors, high constables, constables, and sub-constables.

### SECT. 3.—*Courts of Justice.*

The system of judicature in Ireland rests on the same principles as that of England, whence it was introduced by King John when Lord of Ireland. He established the Courts of Chancery, King's Bench, and Exchequer, and instituted circuits by justices itinerant through such parts of the island as acknowledged the authority of the King of England.

The *Court of Chancery* has the same jurisdiction and power as that of England; the Lord Chancellor ranks next to the Lord Lieutenant, except within the city of Dublin, where the Lord Mayor takes precedence. He is assisted in the discharge of his judicial functions by the Master of the Rolls. This latter office was for a long period nearly a sinecure, the only duty attached to it being the custody of the principal records of the Court, which was executed by deputy; but at the Union, the presence of the Irish Chancellor in the Imperial Parliament being deemed necessary, the Master of the Rolls was vested with judicial powers, subordinate to those of the Chancellor. The salary of the former of these functionaries was fixed at 10,000*l.*, but has been since reduced to 8000*l.*; that of the latter continues at the rate fixed in 1815, 4,500*l.* per annum. The Chancellor holds office during pleasure; the Master of the Rolls during good behaviour. The other principal subordinate officers of the Court are, the Chancellor's secretary; four masters, who investigate the details of judicial proceedings and report thereon; and six clerks, through whom all suits must be brought before the court. In 1815, an Act was passed empowering the Lord Chancellor to appoint extraordinary commissioners to examine witnesses, and take answers and affidavits in England and Scotland respecting suits in the Irish Chancery; the like powers were vested by the same Act in the Exchequer as to suits in equity there. The proceedings in each court have been considerably facilitated by this arrangement. Previously to the Union, the Irish House of Lords was the court of final appellate jurisdiction from the Court of Chancery and the Court of Equity in the Exchequer. This right, after having been claimed by the British House of Lords, was vested ultimately in that of Ireland by acts of both parliaments. At the Union, the right of final appeal was transferred to the House of Lords in the Imperial Parliament.

The Courts of *King's Bench*, *Common Pleas*, and *Exchequer*, are regulated, both in principle and in practice, as in England. Each is under the direction of a chief justice and three inferior or puisne judges. All of them hold their offices during good behaviour, are removable only by an address to the King from parliament, and on resigning in consequence of age or infirmity are entitled to liberal salaries during life. For trial of law records and criminal cases the

country is divided into six circuits, through each of which two of the judges of the law courts proceed twice a year, during Lent and at Midsummer. In cases of illness or of unavoidable absence, their places are supplied on circuit by one of the King's law officers, the attorney-general, the solicitor-general, and three serjeants.

The Lord Lieutenant and privy council used formerly to sit as a court of justice in extraordinary cases. From having been held in the Castle, Dublin, this court took the name of the Court of the Castle Chamber; but it was also frequently called the Court of the Star Chamber, from the identity of its objects, principles, and forms, with the English court of that name. It was abolished at the Restoration; but the privy council still sits as a court of appeal, chiefly in ecclesiastical affairs: the Lord Lieutenant nominally, and sometimes personally, presides in it; but the judiciary powers are virtually exercised by the Chancellor, the Master of the Rolls, the heads of the other courts of justice, and such of the King's law officers as are privy councillors. At present, the court consists of what is called the law committee of the council, which, after hearing the case, pronounces judgment in the form of a report to the body at large, which report is always adopted, and thus becomes law.

The other courts sitting in Dublin are, the Prerogative Court, for the trial of ecclesiastical causes; the Court of Admiralty, for offences and suits of debt and damage on the high seas; the Court of Bankruptcy, which is held by commissioners appointed by the Lord Lieutenant; and the Court for the relief of Insolvent Debtors, instituted in 1821. It is presided over by two commissioners, who, besides their fixed court in Dublin, make circuits through the several counties, one commissioner visiting those in the northern provinces, and the other those in the southern. They are appointed by the Lord Lieutenant.

To diminish the expenses and delays attendant on the usual modes of proceeding in the superior courts of law, an Act was passed in the reign of William III., for deciding cases of small debts by a summary process, called civil bill. The Act, at first, was so inoperative as to be declared obsolete in the beginning of the reign of Anne, when it was revived; and it was further regulated by an Act of 2 Geo. I. But the most important step towards removing the impediments to the attainment of justice by the great body of the people, both in criminal and civil cases, was the appointment of county courts of general session, for which purpose every county is divided into two districts, in each of which general sessions of the peace are held four times a year by the resident magistrates, who are aided in their deliberations by an assistant barrister. The qualifications for this latter officer are, that he must be a practising barrister, and of six years' standing. He is ineligible to sit in parliament, and is prohibited from practising in the county in which he acts in a judicial capacity. By another arrangement, magistrates are required to hold courts of petty sessions for the investigation of minor criminal offences, which they had previously been in the habit of deciding in private. The effects of both these changes have been satisfactory.

Courts of quarter and petty sessions are held in the different boroughs; and in the larger towns, which have recorders, these functionaries hold courts for the trial of civil causes and the lighter class

of criminal offences. But all processes of a graver nature are referred to the judges during circuit.

Every manor, of which the number is very considerable, is entitled to hold courts of record, as in cities and towns, but generally to a very limited extent. The presiding officer is the seneschal, appointed by the lord of the manor. The manor of St. Sepulchre's, of which the Archbishop of Dublin is lord, claims the right to inflict capital punishment; but this right has not been exercised, at least in modern times.

---

## CHAPTER VIII.—RELIGIOUS ESTABLISHMENTS OF GREAT BRITAIN AND IRELAND.

### SECT. 1. *Constitution and Government of the Church of England.*

THE Established Church of England is Protestant Episcopal. Its fundamental doctrines and tenets are embodied in the Thirty-Nine Articles, agreed upon in convocation in 1562, and revised and finally settled in 1571. These articles are said to have been chiefly compiled from others drawn up shortly after the Reformation in 1552, in the reign of Edward VI., and which had been repealed under Mary. But though this be the state religion, all others are tolerated under certain restrictions; and civil disabilities can hardly now be said to attach to any class of Her Majesty's Christian subjects. The oaths, however, that must be taken before persons are qualified to hold the higher civil and military offices, exclude from them Jews and infidels. The oaths in question are those of allegiance and supremacy, imposed by the 1st Geo. II. c. 13, and of abjuration, imposed by the 6th Geo. III. c. 53. In the case of Quakers and Moravians, declarations to the same effect are substituted. It was formerly necessary for all persons elected to any office, to take, within a specified time, the sacrament according to the forms prescribed by the Church of England; but this obligation was rendered unnecessary by the 9th Geo. IV. c. 17, and a declaration, "upon the true faith of a Christian," substituted in its stead.

The Roman Catholic Relief Act, 10 Geo. IV. c. 7, abolished the declaration against transubstantiation, the invocation of saints, and the sacrifice of the mass, as practised by the Church of Rome; enacting that Roman Catholics, on taking an oath, the form of which is prescribed in the Act, in lieu of the oaths of allegiance, supremacy, and abjuration, may sit in parliament, and be admitted to all offices, civil as well as military, excepting those of Regent of the United Kingdom, Lord Chancellor, Lord Keeper, Lord Commissioner of the Great Seal, Lord Lieutenant of Ireland, and his Majesty's High Commissioner to the General Assembly of the Church of Scotland. Roman Catholics are not, however, allowed to hold any church office, nor, if members of a corporation, to vote in church appointments. They are prohibited also from advising the Crown in the disposal of church preferment; and the livings in their possession are disposed of by the Archbishop of Canterbury and the Universities. The only class of Christians at present proscribed on account of religious opinions are the Jesuits, and members of religious orders bound by monastic or religious vows.

The statute 10 Geo. IV. c. 7, enacts, that it is a misdemeanor for such persons, unless they be natural-born subjects, to come into the kingdom; and that they shall be banished the realm for life. If natural-born subjects, they must give notice to the competent authorities who are authorised to allow them to remain six months. A member of any monastic or religious order administering, or aiding in administering religious vows, is guilty of a misdemeanor: an express exception is, however, made in favour of members of female religious societies. The Act 1 Will. and Mary, s. 1, c. 18, usually called the Toleration Act, amended by the 52d Geo. III. c. 155, orders, that the places of worship of Protestant Dissenters must, before they can be used as such, be registered in the bishop's or archdeacon's court of the diocese or archdeaconry, and recorded by the clerk of the peace, at the general or quarter sessions held for the county or district in which they are situated. The doors of such places of worship are not to be locked or bolted during divine service, under a penalty of not less than 40s., and not more than 20*l*. The Toleration Act also requires certain oaths or declarations to be taken by all ministers or preachers before officiating in any chapels, under a penalty of not less than 20s., nor more than 10*l*. It is further enacted, that no person holding any judicial or civil office, nor any corporate officer, shall attend such meetings in the habit or with the insignia of his office. A compliance with these regulations exempts the parties from certain penalties imposed by some old Acts passed in the reign of Elizabeth and Charles, which made it necessary that every one should attend divine service in the established church, and prohibited meetings of Dissenters altogether. Dissenting ministers taking the oaths are also exempted from serving in certain parish offices, and from being balloted for the militia; and their places of worship are protected from disturbance. The places of worship belonging to the Jews do not appear to be recognised by the laws.

The administration of the state religion is entrusted to the clergy; a class set apart for this purpose, and who constitute what is meant by the Church of England.

In consequence of their sacred duties, the clergy enjoy many immunities. They cannot be compelled to serve on a jury, nor to appear at a court leet or view of frank pledge. Neither can they be chosen to any temporal office, as overseer of the poor, bailiff, reeve, constable, or the like. During their attendance on divine service they are also privileged from arrest in civil suits. But as they have their privileges, so also they have their disabilities. Clergymen are incapable of sitting in the House of Commons; and the 57th Geo. III. c. 99, disables them, without the bishop's license, from taking a greater quantity of land than eighty acres to farm, under a penalty of 40s. per annum for every acre so held. Neither can they engage in any manner of trade, or sell any merchandise, under forfeiture of the value of the goods; every contract made in the course of such dealing being declared to be void.

The clergy may be considered in two characters:—1, in regard to their sacred duties as ministers of religion; and 2, as members of an establishment of human institution, deriving its rights and privileges from municipal law. In the former capacity they are divided into three orders and degrees—bishops, priests, and deacons, in imitation of

the *Επισκοποι*, *Πρεσβυτεροι*, and *Διακονοι* mentioned in the New Testament. In the latter they consist of archbishops, bishops, archdeacons, deans, parsons, and curates.

I. The consecration of bishops, and the ordination of priests and deacons are religious ceremonies. The first will be mentioned when we have to speak of bishops as members of the church establishment. The ordination of priests and deacons is performed by a bishop, or archbishop, in the cathedral or church of the parish wherein he resides. The forms of service used on these occasions are given in the Book of Common Prayer, as established by the Act of Uniformity, 13 and 14 Car. II. No person can be admitted to deacon's orders until he be twenty-three years of age, nor to priest's until he be twenty-four. By a faculty or dispensation, however, obtained from the Archbishop of Canterbury, a person may be admitted deacon before he attains the age of twenty-three; but the rule with regard to the age necessary for priest's orders is inflexible. It is enacted by the 44th Geo. III. c. 43, that "none shall be made minister unless it appear to the bishop that he is of honest life, and possesseth the doctrine contained in the Thirty-nine Articles, nor unless he be able to answer and render to the ordinary an account of his faith in Latin, according to the said Articles, or have special gift or ability to be a preacher." The ordinary way in which his qualifications as to character and doctrine are made to appear to the bishop, is by a written testimonial: concerning which, it is directed by canon. 34\*, with respect to both priest's and deacon's orders, that "no bishop shall admit any person into sacred orders, except he shall then exhibit letters testimonial of his good life and conversation, under the seal of some college of Cambridge or Oxford, where before he remained, or of three or four grave ministers, together with the subscription and testimony of other credible persons, who have known his life and behaviour for the space of three years next before." The statute 13 Eliz. also requires, with respect to priest's orders in particular, that "none shall be made minister unless he first bring to the bishop of that diocese, from men known to the bishop to be of sound religion, a testimonial both of his honest life and of his professing the doctrine expressed in the Thirty-nine Articles." It is quite discretionary with the bishop whom he admits; nor is he obliged to give any reason for his refusal. Hence the qualifications required sometimes differ, though never materially. If any bishop, however, or suffragan, admit any one to holy orders who is not properly examined and qualified, the archbishop of his province having notice of it, and being assisted by one bishop, "may suspend the bishop or suffragan so offending from making either priests or deacons for two years." By another canon (33) it is also provided, that "no person shall be admitted into holy orders except he shall exhibit to the bishop, of whom he desires imposition of hands, a presentation of himself to some ecclesiastical preferment then void in the diocese, or shall bring to the said bishop a true and undoubted certifi-

\* The canons were a series of ordinances made for the regulation of the church by the Archbishop and clergy of the province of Canterbury, convened in convocation, 1603, and which were subsequently ratified by the King. They were also received, and passed, about two years after by the province of York. Not having the force of an Act of Parliament, they are binding on the clergy only.

cate, that either he is provided of some church within the said diocese, where he may attend the cure of souls, or of some minister's place vacant, either in the cathedral church of that diocese or in some other collegiate church therein, where he may execute his ministry; or that he is a fellow, or in right as a fellow, or to be a conduct or chaplain in some college in Cambridge or Oxford; or except he be a Master of Arts of five years' standing, that lives at his own charge in either of the Universities; or except by the bishop himself, that doth ordain him minister, he be shortly after to be admitted either to some benefice or curateship then void: and if any bishop shall admit any person into the ministry that hath none of these titles, then he shall keep and maintain him with all things necessary till he do prefer him to some ecclesiastical living; and if the said bishop shall refuse to do so, he shall be suspended by the archbishop, being assisted by another bishop, from giving orders for the space of a year." The method of examination is laid down by the canons, viz., that when the bishop intends to hold an ordination, all who are desirous to be admitted into the ministry are to appear on the fourth day before the ordination; and there the bishop is to appoint some of the priests attending him, and others skilled in the divine law, and exercised in the ecclesiastical sanctions, who shall diligently examine the life, age, and title of the persons to be ordained; at what place they had their education, whether they be well learned, and whether they be instructed in the law of God. By the 24th canon no bishop shall admit any person into holy orders who is not of his own diocese, except he be either of one of the Universities of this realm, or except he bring letters dimissory from the bishop of whose diocese he is. The persons to whom such letters may be granted are those who were born in the diocese, or are promoted, or are resident in it. In practice, however, they seem generally to be granted by the bishop in whose diocese the candidate is promoted, or where his title lies. The fitness of the person to be ordained as to life, learning, title, and the like, is to be ascertained by the bishop granting the letters dimissory. The 1st of Eliz. c. 1, and 1 Wm. and Mary, c. 8, require every person taking orders to take the oaths of allegiance and supremacy before the ordinary or commissary; and by 13 Eliz., c. 12, none shall be admitted to the order of deacon or minister unless he first subscribe the Thirty-nine Articles. The 36th canon further requires that every person, on being ordained, shall subscribe a declaration therein contained, acknowledging the King's supremacy; that the Book of Common Prayer, and of ordering of bishops, priests, and deacons, contains nothing contrary to the word of God; that it may be lawfully used; that he will use the form prescribed in it in public prayer, and in the administration of the sacrament, and none other; and that he allows the articles of religion to be agreeable to the word of God. The 24 Geo. III., c. 35, empowers the Bishop of London, or any other bishop appointed by him, to admit to the order of deacon or priest persons subjects of or citizens of other countries out of Her Majesty's dominions, without requiring them to take the oath of allegiance. But they are not to exercise their office within Her Majesty's dominions; and this exemption from taking the above oath is to be mentioned in their testimonial. The 31 Eliz., c. 6, enacts, that any person taking any reward or other profit, directly or

indirectly, for or to procure the ordaining or making of any minister, or giving of any orders, or license to preach, shall forfeit 40*l.*, and the person corruptly ordained 10*l.*; and if, at any time within seven years, such person accept any benefice or promotion ecclesiastical, the same shall be void immediately on his induction, investiture, or installation; and the patron shall present, or collate, or dispose of the same, as if he were dead.

The offices of priest and deacon differed much more in former times than at present. Anciently, the deacons seem to have performed the duties which at present devolve on the parish clerk, making the responses, and repeating the Confession, the Creed, and the Lord's Prayer, after the priest. In general, however, they now perform the same offices in the Liturgy as a priest, with the exception of pronouncing the absolution and administering the Lord's Supper; which latter is to be done only by a priest (13 and 14 Car. II., c. 4). The reason of deacons not being allowed to pronounce the absolution seems to depend rather on the form of ordination than the Rubric. The latter, indeed, directs that it shall be done by the priest alone; but the word priest is frequently used there as merely signifying the officiating minister. In the ordination, the authority given to the deacon is, "to read the Gospel and to preach;" while to the priest it is said—"Receive thou the Holy Ghost: whose sins thou dost forgive, they are forgiven; and whose sins thou dost retain, they are retained." Neither priests nor deacons are allowed to preach without license of the archbishop, or of the bishop of the diocese where they are placed, or one of the two Universities.

The form of service used by the Church of England is contained in the Book of Common Prayer, first established by the 2nd and 3rd of Edward VI., and ultimately by the Act of Charles II. already mentioned.

Divine service is not allowed to be performed, nor the sacrament administered, anywhere but in some church or chapel duly consecrated, though it is said the bishop may grant a licence for that purpose until consecration. He, too, performs the ceremony of consecration. No church or chapel, however, is allowed to be consecrated unless it be first sufficiently endowed.

II. *The Ecclesiastical Divisions* of England and Wales are provinces or archbishoprics, dioceses or bishoprics, archdeaconries, deaneries and parishes; each of which divisions has its functionaries, who preside over the functionaries of the inferior divisions; the King, as head of the church, presiding over all. The archbishops, of whom there are two, the Archbishop of Canterbury and the Archbishop of York, have under them, the former twenty, the latter five, bishops. The bishoprics within the province of Canterbury are those of London, Rochester, Winchester, Norwich, Lincoln, Ely, Chichester, Salisbury, Exeter, Bath and Wells, Worcester, Coventry and Lichfield, Hereford, Gloucester and Bristol, Peterborough, Oxford, Llandaff, St. David's, Bangor, and St. Asaph. The bishoprics within the province of York are, Durham, Chester, Carlisle, Ripon, and Sodor and Man. Each archbishop has also a diocese of his own, in which he has the same jurisdiction as an ordinary bishop. Each diocese is again divided into archdeaconries, of which there are at present about 60; each

archdeaconry into deaneries, and each deanery into parishes. No particular kind of revenue is due to bishops of common right, as it is to parsons. The possessions attached to the different sees differ in no way from lay possessions, and consist indifferently of lands or other property. With respect to these, the bishops are corporations sole. It is in right of their temporal possessions that they sit in Parliament.

For the management of ecclesiastical affairs the provinces have, or rather had, each a council, or convocation, as it is termed, consisting of the bishops, archdeacons, and deans, in person, and of a certain number of proctors, as the representatives of the inferior clergy. These councils had, at one time, the exclusive right of taxing their own body; but this was given up in 1664, since which they have almost entirely fallen into disuse. They still, however, continue to be summoned, as a matter of form, at the commencement of every parliament, and are prorogued from time to time, and dissolved much in the same manner as parliament.

*Powers, Privileges, Election, &c., of Archbishops and Bishops.*—The Archbishop of Canterbury is styled Primate and Metropolitan of all England; the Archbishop of York, Primate and Metropolitan of England only: the more extensive title of the former is said to be derived from the Pope having vested the Archbishop of Canterbury with a legate authority over both provinces.

An archbishop is the chief of the clergy in his province, and has the inspection of its bishops and inferior clergy, and may deprive them on sufficient cause. He has also his own diocese, in which he exercises episcopal, as in his province he exercises archiepiscopal jurisdiction. Appeals are made to him from all inferior jurisdictions within his province, and from the consistory courts of each diocese to his archiepiscopal court. During the vacancy of any see in his province, he is guardian of its spiritualities, as the king is of the temporalities, and exercises all ecclesiastical jurisdiction therein. When an archiepiscopal see is vacant, the dean and chapter are the spiritual guardians, and have been so since the office of Prior of Canterbury was abolished at the Reformation. The archbishop is entitled to present by lapse to all ecclesiastical livings in the disposal of his diocesan bishops, if not filled within six months. And the archbishop has a customary prerogative, when he consecrates a bishop, to name a clerk or chaplain of his own, to be provided for by such suffragan; in lieu of which it is now usual for the bishop to make over by deed to his archbishop, his executors, and assigns, the next presentation of such dignity or benefice in the bishop's disposal within that see as the archbishop himself shall choose, which is, therefore, called his option. These options, however, are only binding on the bishop who grants them, and not on his successors. The Archbishop of Canterbury crowns the kings and queens regnant, and the Archbishop of York the queens consort, of the realm. The former has also, by statute 25 Henry VIII., c. 21, the power to grant dispensations in any case, not contrary to the Holy Scriptures and the law of God, where the Pope used formerly to grant them, which is the origin of his granting special licenses to marry at any place or time, to hold two livings, and so forth; and on this, also, is founded his right to confer degrees in prejudice of the two Universities.

The bishops have nearly the same jurisdiction within their dioceses that the archbishops have in their provinces. All bishops have chancellors to assist them in holding their courts, and in other matters of ecclesiastical law. These, as well as all other ecclesiastical officers, must, if lay and unmarried, be doctors of civil law. They have also a certain number of chaplains—the archbishops eight, and the bishops six each.

“An archbishop or bishop is elected by the chapter of his cathedral church, by virtue of a licence from the Crown, termed a *congé d'élire*. Election used to be, in very early times, the usual mode of elevation to the episcopal chair throughout Christendom, and was made promiscuously by the laity as well as clergy. The confusion which in consequence ensued, and a wish, no doubt, to aggrandise their power, early led the sovereigns to take the appointment in some measure into their own hands, by reserving to themselves a right of confirming the election, and of granting investiture of the temporalities, which now began almost universally to be annexed to the spiritual dignities. Without this confirmation and investiture, the elected bishop could neither be consecrated nor receive any secular profits. This right was acknowledged in the Emperor Charlemagne, in 773, by Pope Hadrian I. and the Council of Lateran; and is said to have been exercised by the kings of England as early as the Saxon times. In the course of time, however, the custom of making elections by the church having been fully established, the popes began to object to the method of granting these investitures, *per annulum et baculum*, that is, by the prince's delivering a ring and pastoral staff, or crosier; contending that this was an encroachment on the church's authority, and an attempt, by a delivery of these symbols, to confer a spiritual jurisdiction. Towards the close of the eleventh century, Pope Gregory VII. published a bull of excommunication against all princes who should dare to confer investitures and all prelates who should venture to receive them. Long and eager were the contests occasioned by this famous claim. At length, when the Emperor Henry V. agreed to remove all suspicion of encroachment on the spiritual character, by conferring investitures for the future *per sceptrum*, and not *per annulum et baculum*, and when the Kings of France and England consented to alter the forms in their kingdoms, and receive only homage from the bishops for their temporalities, instead of investing them by the ring and crosier, the Court of Rome found it prudent to suspend for a while its other pretensions.

“This concession was obtained in England from Henry I. by Archbishop Anselm; but, about a century afterwards, John, in order to obtain the support of the pope against his discontented barons, consented to give up by charter, to all the monasteries and cathedrals in the kingdom, the free right of electing their prelates, whether abbots or bishops: reserving only to the Crown the custody of the temporalities during the vacancy; the form of granting a licence to elect (the origin of the present *congé d'élire*), on refusal whereof the electors might proceed without it; and the right of approbation afterwards was not to be denied without a reasonable and lawful cause, as is expressly stated in Magna Charta. But at the Reformation, the stat. 25 Henry VIII. c. 20. restored the ancient right of nomination to the

Crown; it being enacted, that at every avoidance of a bishopric, the King may send to the dean and chapter his usual licence to proceed to election, which is always to be accompanied with a letter missive from the King, containing the name of the person he would have them to elect; and if the dean and chapter delay the election above twelve days, the nomination is to devolve on the King, who may by letters patent appoint such person as he pleases. This election or nomination, if it be of a bishop, must be signified by the King's letters patent to the archbishop of the province; if it be of an archbishop, to the other archbishop and to two bishops, or to four bishops; requiring them to confirm, invest, and consecrate the person so elected, which they are bound to do immediately, without any application to the see of Rome.\* Certain forms are gone through at this election, but these are not of any general interest. After election and confirmation, the new bishop is invested with full power to exercise his spiritual jurisdiction; he is not, however, except in the case of translation from some other see, fully bishop until he has been consecrated—a ceremony, of which the form, with that observed at the ordination of priests and deacons, may be seen in the Book of Common Prayer. The oaths of allegiance and supremacy must, on the completion of the ceremony, be administered, together with an oath, in the case of a bishop, of obedience to the archbishop. Every newly-elected archbishop or bishop must do homage to the King before he is put in possession of the temporalities of his see or can sit in parliament.

Archbishoprics and bishoprics become void by death, by deprivation for any gross and notorious crime, and by resignation.

*Magnitude and Emolument of Bishoprics.*—The discrepancy that prevailed in ancient times in the size of bishoprics, though somewhat diminished by the erection of new ones at the Reformation, has always continued; and the inconveniences thence resulting have been greatly augmented by the wonderful increase that has taken place since 1760 in the population of certain districts compared with others. The following table gives a view of the population, parishes, &c., contained in each bishopric, as they existed on the 1st of May, 1831:—

*Benefices, Parishes, Churches and Chapels, and Population of the several Dioceses in 1831.†*

| Diocese.        | Number of Benefices. | Number of Parishes. | Churches and Chapels. | Population. | Diocese.       | Number of Benefices. | Number of Parishes. | Churches and Chapels. | Population. |
|-----------------|----------------------|---------------------|-----------------------|-------------|----------------|----------------------|---------------------|-----------------------|-------------|
| St. Asaph . .   | 160                  | 180                 | 148                   | 191,156     | Lichfield and  | 683                  | 650                 | 650                   | 1,045,481   |
| Bangor . .      | 181                  | 179                 | 192                   | 163,712     | Coventry . .   |                      |                     |                       |             |
| Bath and Wells  | 440                  | 479                 | 498                   | 403,795     | Lincoln . .    | 1,278                | 1,576               | 1,577                 | 889,408     |
| Bristol . .     | 255                  | 266                 | 306                   | 232,028     | London . .     | 577                  | 650                 | 688                   | 1,728,665   |
| Canterbury . .  | 948                  | 369                 | 374                   | 465,272     | Norwich . .    | 1,076                | 1,178               | 1,810                 | 680,188     |

\* *Blackstone's Commentaries*, book i. cap. 11.

† This table is extracted from the Preliminary Remarks (p. 19) prefixed to the Census of 1831. It does not quite agree with the tables in the Report of the Commissioners of Ecclesiastical Inquiry, but the discrepancies are immaterial.

The nett revenue of the different sees, as returned to the Commissioners of Ecclesiastical Inquiry, at an average of the three years ending with 1831, amounted to 160,292*l.* a-year, distributed as follows:—

|                              | £.     |                                 | £.     |
|------------------------------|--------|---------------------------------|--------|

| „ Gloucester . . .           | 2,282  |                                 |        |

It is seen from the last table that the revenues, as well as the territorial extent and population, of the different sees differed very widely; so much so, that while the Bishop of Durham had a nett revenue of from 18,000*l.* to 20,000*l.* a-year, the revenue of the see of Llandaff did not exceed from 900*l.* to 1,300*l.* a-year; and there are other instances in which the discrepancy is not much less striking. This difference was partly owing to circumstances connected with the original establishment of the various sees, and partly to the property attached to some having, from various causes, become in the course of time much more valuable than that attached to others.

But, however the inequalities referred to may have originated, it has long been felt that a new arrangement of the bishoprics, both as respects their territorial magnitude and their revenues, would be highly desirable; and such an arrangement is now in course of being effected. The Ecclesiastical Commissioners, appointed in 1834, recommended that two new bishoprics—those of Manchester and Ripon—should be formed in the principal manufacturing districts, chiefly out of territories included in the dioceses of York and Chester. They further recommended that, saving the rights of the (then) existing incumbents, the bishoprics of Gloucester and Bristol should be united, and the bishopric of Sodor and Man suppressed. The previous table shows, that at an average of the three years ending with 1831, the total nett revenue of the different sees amounted to 160,292*l.*, giving, had it been equally divided, an annual income of 5,925*l.* to each see. But though the differences in the incomes of the various sees were then much too great, it is right that the revenues of archbishops should exceed those of bishops, and it may also be proper to make reasonable distinctions in the revenues of the latter. Such appears to have been the view of this matter taken by the commissioners; and they consequently recommended, that according as opportunity offered sundry deductions should be made from the revenues of the sees of Canterbury, York, London, Durham, Winchester, &c.; and that the surplus revenue so arising should be formed into a fund for the endowment of the two new bishoprics, and for raising the income of the poorer class of sees to

from 4,000*l.* to 5,000*l.* a-year. These recommendations have since been confirmed and carried out in all their essential particulars by the Act 6 and 7 Will. IV. c. 77, and by the Orders in Council issued under its authority. The income of the Bishop of Durham was reduced in 1836, on the death of Dr. Van Mildert, to 8,000*l.* a-year. In the course of the same year Ripon was formed into a bishopric. The sees of Gloucester and Bristol have also been united; and it is proposed to unite the sees of Bangor and St. Asaph on the occurrence of the first vacancy in either. The formation of the bishopric of Manchester is to be delayed till this last-mentioned event takes place, that the total number of bishoprics may not be increased. The result of these arrangements is exhibited in the following table:—

*Account showing the Gross and Nett Revenue produced by the different Arch-bishoprics and Bishoprics of England and Wales in 1843; the Revenue that will be enjoyed by each Archbishop and Bishop under the Act 6 & 7 Will. IV., c. 77, when it takes effect; and the instances in which it has already (July, 1846), taken effect.*

| Sees.                  | Income of Archbishoprics and Bishoprics in 1843. |             | Income of Incumbent as regulated by Act 6 & 7 Will. IV., c. 77. | Sees in which the 6 & 7 Will. IV., c. 77, has taken effect. |
|------------------------|--------------------------------------------------|-------------|-----------------------------------------------------------------|-------------------------------------------------------------|
|                        | Gross.                                           | Nett.       |                                                                 |                                                             |

By far the largest part of the revenue of the bishops, as well as that of the deans and chapters (*see post*), is derived from land. The estates belonging to the church are mostly let on lives, on the system of fines. This makes the revenue of the different sees fluctuate from

year to year, according as a less or greater amount of fines is received, and has been a considerable difficulty in the way of the new arrangements. We have elsewhere pointed out the mischievous influence of the practice of letting land by fine. Indeed, the interests of the church, as well as those of the public, would be equally promoted by giving every facility to the conversion of leases for lives into leases for moderate terms of years at an equal rent.

*Deans and Chapters.*—The dean and chapter are usually said to be the council of the bishop. They form a body corporate, consisting of the dean, who is chief, and a certain number of canons or prebendaries, as the case may be. The possessions of the dean and chapter being, however, for the most part divided, the dean having a certain part in right of his deanery, and each of the prebendaries a certain part in right of their prebends, they form, in respect of their particular shares, corporations sole. The residue is held by the dean and chapter in their capacity of a corporation aggregate. In this capacity they also vote in the chapter. When the bishops dispersed the body of their clergy by appointing them to parochial cures, they appear to have reserved a college of priests or secular canons for their counsel and assistance, and for the constant celebration of divine offices in the mother or cathedral church; the principal of these obtained the name of *decanus*; or dean, probably, as Blackstone supposes, from his being at first appointed to superintend *ten* canons or prebendaries. By degrees, however, their dependence on the bishop became less and less, until the latter had little more power over them than the right of visitation, as at present, and even this in a very limited degree. The corporate character of the dean and chapter is of course derived from the Crown. Of the deans and chapters, some are said to be of old; some of new foundation. Deans of the old foundation come in by election of the chapter upon the King's *congé d'élire*, with the royal assent, and confirmation by the bishop, much in the same way as the bishops themselves; but, generally, deans of the new foundation come in by the King's letters patent, upon which they are instituted, and then installed upon a mandate, pursuant to such institution, and directed to the chapters. The chapter consists of canons, or prebendaries, sometimes appointed by the King, sometimes by the bishop, and sometimes elected by each other. The chapter, in a collegiate church, is more properly called a college, as at Westminster and Windsor, where there is no episcopal see. There may be a chapter without any dean, as the chapter of the collegiate church of Southwell; and grants by or to them are as effectual as other grants by dean and chapter. In the cathedral church of St. David's and Llandaff there are no deans, the bishop in each being the head of the chapter.

Every dean must be resident in his cathedral church four score and ten days, *conjunctim* or *divisim*, in every year, at the least; and must continue therein preaching the word of God, and keeping good hospitality, unless prevented by weighty and urgent causes, to be approved by the bishop, or in any other lawful sort dispensed with.

The estates and revenues belonging to some of the deans and chapters are very large. Thus the dean of Durham has a nett income, exclusive of the expense of servants, and of the establishment, of 4,800*l*.

a year, and the chapter of 32,160*l.*; the dean of Oxford has 3,113*l.*, and the chapter 14,736*l.*; the dean of Westminster has 2,979*l.*, and the chapter 17,566*l.*; and the revenues enjoyed by the deans and chapters of Windsor, Canterbury, Winchester, Worcester, and others, are also very large.

*Table showing the Amount of the Revenue of the Cathedral and Collegiate Churches of England and Wales at an average of the Seven Years ending with 1834, and its Appropriation.—(2nd Report of Church Commissioners, p. 25.)*

| Deans and Chapters. | Total Annual Revenue.                             | Total Expenses of Establishment. | Total Sum to be divided among the Members of the Chapters. | Annual Revenue of Dean or other senior Officer. | Annual Revenue of each Prebend or Canon Residentiary. | Number of Prebends or Canons, exclusive of the Dean. |

It is apparent that very considerable reductions might be made in several of these establishments without in any degree impairing their real efficiency. This, also, is the opinion of the Church Commissioners, who state, that "the most important objects of these establishments may be secured and continued consistently with a reduction of the present cathedral preferments."—And, conformably to this statement, they recommend that various reductions should be made; and that the surplus revenue thence arising should be appropriated, partly to increase the smaller class of livings, and partly to endow churches and chapels in places where they are wanted.

*Archdeacons.*—The office of archdeacon is said to have originated about the end of the third century, when the bishops adopted the practice of choosing for their peculiar service some one of the deacons, who at that time merely assisted as servants in the performance of the divine rites. The one thus chosen was termed archdeacon; and being always about the bishop, and delegated to visit the more distant parts of the diocese, and to examine and report upon certain cases, he succeeded at length in establishing an independent jurisdiction. So early, indeed, as the beginning of the seventh century, the archdeacon appears to have possessed the chief care and inspection of the diocese. The division, however, of dioceses into archdeaconries, which took place in

England shortly after the Conquest, and the grants of particular powers, which the bishops were enabled to make under the charter of William the Conqueror, necessarily terminated their general jurisdiction over the whole diocese: to supply which the offices of vicar-general, official, and chancellor to the bishop were created.

Archdeacons are a very important class of church officers: their business is to examine candidates for holy orders, to make parochial circuits, and to see that the clergy within their jurisdiction do their duty. They have courts where they may inflict censures, suspend or excommunicate persons, prove wills, grant administrations, and hear ecclesiastical causes, subject to an appeal to the bishop. (See *ante*, p. 186.)

Archdeaconries are commonly given by bishops, who prefer to them by collation; but if an archdeaconry be in the gift of a layman, he presents to the bishop, who institutes in like manner as to an ordinary benefice. Archdeacons are ordered by the 13 and 14 Car. II., c. 4, to read the Common Prayer, and declare their assent thereto, in the same manner as other persons admitted to ecclesiastical benefices; and they must also subscribe the same before the ordinary: but the 13 Eliz., c. 12, does not oblige them to subscribe and read the Thirty-nine Articles; for though an archdeaconry be a benefice with cure, it does not come within the statute, which is held to apply only to such benefices with cure as have particular churches belonging to them.

The emoluments of the archdeacons are, for the most part, very inadequate. The Ecclesiastical Commissioners recommend that their incomes should be increased, and that greater efficiency should be given to the office. Their remuneration, such as it is, arises principally from small payments, made to them in their visitations, under the name of procurations, the amount of which has continued the same for several centuries. The total of their emoluments is, in most cases, not sufficient to defray the necessary expenses of their ordinary visitations, still less of their parochial circuits, the regular performance of which is the most essential of their duties. The Commissioners state that a stall in each cathedral should, where practicable, be applied to the purpose of making a better provision for this important office.

*Deans and Deaneries.*—There are several sorts of deans and deaneries. 1st, Those belonging to the ecclesiastical division of deaneries already mentioned, called rural deans, who originally ordered the ecclesiastical affairs within their deaneries and precincts, under the direction of the bishops or the archdeacons. These, however, had been disused in most dioceses; but it has of late been considered desirable to revive them. 2dly, The deans of cathedrals, already described, who have a chapter consisting of prebendaries, or canons, subordinate to the bishop, as a council assistant to him. The third species of deans are those of *peculiars*; that is, of particular parishes and churches, or rural districts that have jurisdiction within themselves, and are not under the ordinary of the diocese. There are several sorts of peculiars, as royal peculiars, archiepiscopal, and episcopal, peculiars, and those of deans and chapters, and the like. Deans of peculiars have sometimes jurisdiction and cure of souls, as the Dean of Battle, in Sussex, and sometimes jurisdiction only, as the Dean of the Arches, London.

*Parsons, Vicars, &c.*—Parsons, *Personæ ecclesiæ*, the most numerous and important order of men in the establishment, are the incumbents of parish churches, duly inducted, and intrusted with the cure of the souls of their parishioners. They are either rectors or vicars; the difference between them being, that the one is, of common right, entitled to all the tithes or tenths of the produce within his parish, while the other is entitled only to a certain portion. Both, however, discharge the same parochial duties, performing divine service in the church on Sundays, and other festivals, and officiating in christenings, marriages, and burials. It is their duty, also, to visit the sick in their parishes, and, if necessary, to read prayers and administer the sacrament to them. In some parishes there are neither rectors nor vicars; in others, again, from their having other ecclesiastical preferment or avocations, they are unable to reside. In these, their duties are performed by curates.

*Tithes.*—The custom of paying tithes for the support of the clergy was, no doubt, derived from the Levitical law, and was probably introduced into England as early as Christianity itself. But it did not exist, as a civil right, until the latter end of the eighth century, when Offa, king of Mercia, made a law giving to the church all the tithes of his kingdom. This law was extended, about sixty years after, by Ethelwulph, over the whole of England. For centuries afterwards, however, it was customary for the landowners to pay their tithes to whatever clergyman they pleased; and so it continued until after the Conquest, when the appropriation of the tithes of each particular parish for the support of the incumbent of the parish church is generally said to have taken place; the lords of manors founding churches, and endowing them with the tithes of the lands within their manors. Hence it is, according to some, that parishes and manors are at this day usually found co-extensive. Perhaps, however, it is a more probable conjecture, that the Normans found parishes already existing, and, in granting manors, adopted them as convenient well-known divisions. This also seems in some measure confirmed by the fact, that though manors sometimes extend over several parishes, they never run into each other. In some parishes, the tithes of a particular district are payable to the rector of another parish, which is explained by the circumstance just mentioned, viz., that in manors extending over several parishes, it was at the option of the lord to apportion the payment of the tithes in what manner he pleased. This settlement, however, did not proceed without interruption. In many parishes, the religious societies who had established themselves in various parts of the kingdom, procured the tithes to be appropriated to their own houses; undertaking themselves to provide for the performance of all the ecclesiastical duties, which they usually did by means of some of their own members. The extent to which this was carried gave rise to several decrees, by Otho and other popes, forbidding appropriations to be made in future without setting apart some portion of the tithes for the maintenance of a curate to perform the necessary parochial duties. The ingenuity of the monks, however, successfully evaded these decrees. They pretended that they held these appropriations, not for their own worldly advantage, but as trustees only for godly and pious purposes—to defray the expenses of a pil-

grimage, for the purposes of hospitality, or for the relief of the poor; and, under these pretexts, they continued to be appropriated to them as before. At length parliament found it necessary to interfere; and, by stat. 15 Rich. II., c. 6, it was enacted, that on every appropriation of any parish church, a vicar should be well and sufficiently endowed; and, by stat. 4 Hen. IV., c. 12, that "from thenceforth, in every church appropriated, there should be a secular person ordained vicar-perpetual, canonically instituted and inducted, and properly endowed, by the discretion of the ordinary, to do divine service, and to inform the people, and to keep hospitality there; and no religious were in any wise to be made vicar in any church appropriated." The usual method of apportioning the tithes under these acts was by giving the tithes of corn, wood, and hay, or the great tithes, as they were termed, to the rector, and the others, or the small tithes, to the vicar: but the rule varied; and, in some parishes, a portion of the great tithes was also given to the vicar. As these acts, however, applied only to subsequent appropriations, all parishes in which the tithes had been previously appropriated remained as before; and in some instances the practice seems, under various pretences, to have continued even after the passing of these acts; whence it is that we find many parishes at this day without either rector or vicar, these being commonly known by the name of perpetual curacies.

Another interruption to the settlement of tithes was the practice adopted by the religious bodies of procuring from the Pope exemptions of the lands they held from their payment. Four of the orders, namely, the Cistercians, Templars, Hospitallers, and Premonstratenses, had a general exemption; the others obtained one as often as they found it necessary. But these appropriations and exemptions, being given only to the religious houses, must necessarily, but for the interference of parliament, have ceased when the latter were suppressed at the Reformation. To prevent this, a clause was inserted in the acts transferring their possessions to Henry VIII., to the effect that he should enjoy them as amply and beneficially as they had been previously enjoyed by the abbots and priors. The possessions thus acquired by the Crown being afterwards granted out to subjects, tithes, as well as lands exempted from the payment of tithes, got into the hands of laymen, and so continue down to the present time. When this is the case there is both a rector and vicar in the same parish; the former possessing the great or rectorial, the latter the small or vicarial tithes; the rector, however, has nothing to do with the spiritual part of the office, which is entirely performed by the vicar. Until the act 2 and 3 Will. IV., which limits the time for prescription, it was necessary for all claiming exemption from payment of tithes, or, in the language of the law, a "*prescription de non decimando*," to show that the lands for which they claimed such exemption had belonged to one of the privileged orders. Another and more legitimate method of exempting lands from the payment of tithes, was either by commuting the tithe for some fixed money payment, called a *modus decimandi*, vulgarly a *modus*, or by some composition, as giving up to the rector or incumbent of the parish a portion of land, on condition that the remainder

should be exempted. The consent, however, of the patron and ordinary was necessary for the validity of these arrangements.

*Table classing the Appropriations and Improvements; showing the Number possessed by each Class, and the Number of Cases in each Diocese in which the Vicarage is partly or wholly endowed with the Great Tithes.*

The number of vicarages of which the Improvements have not been returned to the Commissioners, is 228. Where the improvement and appropriation of the great tithes is shared between owners of different classes, it is included under each class.

There are some few cases of rectories in which the rector has only a portion of the great tithes, the remainder being the property of a spiritual person or body, or of a lay-impropriator; and in Jersey and Guernsey the benefices are merely nominal rectories, the incumbent not being entitled in any case to more than a portion (generally one-third) of the great tithes, the crown or governor taking the residue; and in some cases the whole goes to the crown or governor.

The following table, founded on the returns under the Property-tax Act, in 1810, exhibits the then annual value of the land, in the different counties of England and Wales, specifying the value of the portions that were tithe-free, titheable, tithe-free in part, and free on payment of a modus. (See page 269.)

*Commutation of Tithes.*—The providing for the clergy by means of tithes, has, in modern times, been greatly objected to. Nothing, indeed, has done so much to weaken the influence of that body in England, and to diminish their usefulness, as the unseemly contests in which they have been necessarily involved with their parishioners on the subject of tithes; and it has too often happened that a clergyman's popularity has depended more on his indulgence in this particular, or on his readiness or ability to sacrifice a portion of his own just claims, than on the purity of his life and the soundness of his doctrines. Tithes have, also, formed a very serious obstacle to agricultural improvement. In this respect they have had a much greater practical influence than might seem, to a superficial observer, to belong to them. By preventing the cultivators from reaping the entire advantage of superior skill and industry, they have discouraged

their efforts, and contributed to render them indolent and indifferent. An occupier of land, if he be a dissenter, is especially indisposed to benefit the church by setting about any improvement in which it must participate so largely. But, independently altogether of this, it is clear, that the subjecting of land to so heavy a tax as a *tenth part of the gross produce*, without any deduction for any part of the expense incurred in cultivation, must be a very great discouragement to the outlay of capital upon it. All agricultural authorities admit that the influence of tithe has been in this way most pernicious. Dr. Paley, who cannot

be suspected of favouring any opinion adverse to the real interests of the church, has not hesitated to say that, "*Of all institutions, adverse to cultivation and improvement, none is so noxious as that of tithes.* A claimant," he continues, "here enters into the produce, who contributed no assistance whatever to the production. When years, perhaps, of care and toil have matured an improvement; when the husbandman sees new crops ripening to his skill and industry; the moment he is ready to put his sickle to the grain, he finds himself compelled to divide his harvest with a stranger. Tithes are a tax, not only upon industry, but upon that industry which feeds mankind; upon that species of exertion which it is the object of all wise laws to cherish and promote."—(*Moral Philosophy*, cap. xi.)

In consequence of the growing prevalence of these opinions, the attention of the public, and of government, has been more and more directed to a commutation of tithe. Various plans for bringing this about have been proposed at different times; and owing to the difficulty of the subject, and the conflicting interests it involves, it was impossible, perhaps, to suggest any scheme that should be in all respects unobjectionable. It was essential that, however effected, the commutation, when once made, should be final, and unsusceptible of farther modification. Unless this had been the case, the principal benefit to be derived from it—the giving full scope to improvement, and to the outlay of capital on the land—would not have been attained. It was necessary, too, in effecting a commutation, that provision should be made, in so far at least as that was practicable, for protecting the clergy against the loss or diminution of their incomes, by any fall in the value of money. These different objects seem to be pretty well accomplished by the Act 6 and 7 Will. IV., c. 71, for the commutation of tithe. According to its provisions, the average value of the tithes in each parish, during the seven years ending with 1835, is to be ascertained and distributed into equivalent quantities of wheat, barley, and oats; and the clergy are to be entitled to get the value of these quantities in all time to come, according to the current prices of the day. By this means they will be liable only to fluctuations in the value of corn; and to these they would have been liable, though no commutation had been effected. Commissioners were appointed under the Act to carry it into execution, and the commutation has now been nearly effected.\*

*Admission of Parsons.*—Endowed parochial churches or benefices, as they are termed, whether having rectors or vicars, are of three sorts—presentative, collative, and donative. To the due admission of a clerk to a presentative benefice, three things are necessary,—presentation, institution, and induction. Presentation is the offering a clerk to the ordinary, whose duty it is to examine into the ability and sufficiency of the person so presented, and to ascertain that he is of the proper age, and in priest's orders. The usual oaths of allegiance, supremacy, and canonical obedience, are then administered; and he is required to subscribe the Thirty-nine Articles, as well as three others required by the 36th Canon, acknowledging the King's supremacy, the correctness of

\* For a discussion of the question as to the influence of tithes on prices, rent, &c., and for some remarks on the operation of the Commutation Act, see the *Treatise on Taxation* by the author of this work, pp. 174–187.

the Book of Common Prayer, and of the Thirty-nine Articles; together with a declaration of conformity with the liturgy of the Church of England. This being done, the ordinary admits him in the usual form. When the bishop has instituted the clerk, he issues a mandate to the archdeacon, from whom another issues to some clergyman to induct; for, till this be done, he is not a complete parson. By the institution he is admitted, *ad officium*, to perform the spiritual functions; but he is not entitled *ad beneficium* to the temporalities of the living, until formally inducted.

The 13 Eliz. c. 12, and the 13 and 14 Car. II., c. 4, order that every person admitted to any benefice shall, within two months after his promotion, publicly read the Thirty-nine Articles and the Common Prayer, and declare his assent thereto; and in the event of his failing to do this, his benefice is declared to be *ipso facto* void. In the latter case, indeed, he is also deprived of all other church preferment he may have. Finally, the incumbent must, within six months after his admission, take the oaths of allegiance and supremacy in one of the courts at Westminster, or at the general quarter sessions of the peace, on pain of being incapacitated to hold his benefice, and other disabilities, and of being subject to a penalty of 500*l*.

It sometimes happens that the right of presentation to a living is in one person, and the right of nomination in another. In this case, the person who has the presentation is bound to present to the bishop such individual only as the person having the nomination may appoint. Collative benefices are, where the right of presentation is in the bishop; and in these all that is necessary to put the clerk in possession of his benefice is institution and induction. Where the benefice is donative, possession is given by the mere donation of the patron in writing, without presentation, institution, or induction.

The *advowson*, or right of presentation, donation, or whatever it may be, originally belonged to the founder of the church; and at this day by far the largest portion of church patronage is vested in lay proprietors. The rest is held partly by the Crown, which came, at the Reformation, into possession of the patronage which had previously belonged to the monasteries; and partly by archbishops and bishops, deans and chapters, dignitaries, and other ecclesiastical corporations sole, universities, colleges, &c., and municipal corporations. The distribution of the patronage in each diocese is exhibited in the following table. (See page 272.)

In the disposal of Crown livings, the chancellor usually presents to all of the value of 20*l*. per annum, or under, in what is called the King's book, containing a survey of all ecclesiastical livings in England made in the 20 Hen. VIII. The disposition of livings above this value, as well as all other church patronage, is understood to rest with the premier and the King himself. The 36 Eliz. c. 6, for the prevention of simony, declares all presentations to any benefice, with cure of souls, made for any sum of money, reward, gift, profit, or benefit whatsoever, void and of no effect in law.

*Residence of the Clergy.*—By the canon as well as the common law, the incumbent of every benefice is under the obligation of residing;

N.B. This table is not quite accurate. It includes only the patronage returned to the Ecclesiastical Commissioners; and there were 178 non-returns, and 86 returns that omitted the patronage. When the patronage is divided among different classes of patrons, it is included under each; so that the total number of patrons will not exactly agree with the total number of benefices.

and by stat. 57 Geo. III. c. 99, persons wilfully absenting themselves from their benefices, for more than three months together in the year, incurred a penalty of one-third of the proceeds; if for six months, one-half, and so on in proportion; to be recovered by the bishop by sequestration, and to be appropriated to the augmentation of Queen Anne's bounty. Chaplains to the King, and other persons of rank mentioned in the Act were exempted during their attendance in the households of such as retained them; as were all heads of houses, magistrates, and professors in the universities, and all students under forty years of age, residing there *bonâ fide* for study. The obstacles to non-residence have, however, been materially increased by the statute 1 and 2 Vict. c. 106, the latest enactment on the subject. Legal residence is not only in the parish, but in the parsonage-house, if there be one. Provision is made by the statute 17 Geo. III., c. 53, for raising money upon ecclesiastical benefices, to be paid off by annually decreasing instalments; and to be expended in building, rebuilding, or repairing the houses belonging to such benefices.

But, notwithstanding the obstacles that have been thus thrown in the way of non-residence, and its unpopularity, as well as that of the

twin practice of pluralities, they still prevail to a very great extent. According to the official return, (Parliamentary Paper, No. 235, Sess. 1846,) there were, of a grand total of 11,127 benefices in England and Wales, in 1844, 7,246 which had resident incumbents, and 3,454 of which the incumbents were non-resident; but of the latter 1,061 are reported to have been doing duty; so that it would seem that no fewer than 2,393 incumbents, or more than one-fifth part of the total number were non-resident, without doing any duty! The return comprises 427 benefices vacant, and from which no report had been obtained.

This certainly is a most undesirable state of things; but it may be doubted whether it can be very materially changed without the augmentation or suppression of a large number of the smaller class of livings. If a living be insufficient for the support of a resident clergyman, it is plain the parish must either be entirely without the services of a parson, or he must be allowed to eke out his revenue by holding some other preferment or living, which must consequently engross a greater or less portion of his time. Now, this is really the case with a very considerable number of livings in the Church of England. It appears that, in 1834, of 10,478 benefices, from which returns had then been received, 297 were under 50*l.* a-year; 1,629 between 50*l.* and 100*l.* a-year; and 1,602 between 100*l.* and 150*l.* a-year; so that there were 1,926 benefices under 100*l.* a-year, and 3,528, or more than a third of all the benefices in the country, under 150*l.* a-year! So late as 1844, there were no glebe-houses on above 3,000 benefices, and many did not possess the means of erecting any. Were the spiritual duties of the poorest of these livings not performed by the clergymen of the neighbouring parishes, it is difficult to see how they could be performed at all. Some of these benefices are very populous: in 1831, 13 contained each a population of more than 10,000; 51, a population of from 5,000 to 10,000; and 251, a population of between 2,500 and 5,000! It is most desirable that there should be a resident clergyman on each of these benefices; or, at least, on all those that have a population of 700 or 800, or upwards. This, however, could not in many instances be accomplished otherwise than by the augmentation of the livings; and the Ecclesiastical Commissioners stated that 235,000*l.* a-year would be required to raise them universally to sums varying from a *minimum* of 200*l.* to a *maximum* stipend of 400*l.* a-year. (See Second Report of Church Commissioners, p. 15.)

But, while so many parishes are unprovided with the means of religious instruction, it appears that there were in the establishment, in 1834, no fewer than 70 sinecure rectories. Of these, nearly half were in the patronage of the Crown or of ecclesiastical corporations; and these, the Commissioners proposed should be suppressed, and their revenues applied to the making more effectual provision for the cure of souls.

Since 1842 the Ecclesiastical Commissioners have been endeavouring to obviate some of the defects they had set in so striking a light, by applying a portion of the funds at their disposal to the augmentation of the smaller livings. Of these they had augmented, previously to the 1st of May, 1844, 496, as follows, viz. :—

| Number of Livings. | Incomes raised to | Annual Augmentation. | Population of Livings |
|--------------------|-------------------|----------------------|-----------------------|
|                    | £.                | £.                   |                       |
| 261                | 150               | 16,722               | 2,000 and upwards.    |
| 96                 | 120               | 4,874                | 1,000 „               |
| 80                 | 100               | 3,253                | 500 „                 |
| 59                 | 80                | 1,430                | 500 „                 |
| 496                | ..                | 25,779               | ..                    |

A person may cease to be a parson or vicar, 1.—By death. 2.—By cession on taking another benefice; for, by the Act 21 Henry VIII., cap. 13, if any one having a benefice of 8*l.* per annum or upwards (according to the valuation in the King's books) accept any other, the first shall be adjudged void, unless he obtain a dispensation, which no one is entitled to have but the chaplains of the King and others therein mentioned, the brethren and sons of lords and knights, and doctors and bachelors of divinity and law, admitted by the universities: a vacancy thus made for want of a dispensation is called cession. 3.—By consecration; for, as previously mentioned, when a clerk is promoted to a bishopric, all his other preferments become void. There was, however, a method, by the favour of the Crown, of holding such livings *in commendam*. *Commenda*, or *ecclesia commendata*, being a living commended by the Crown to the care of a clerk to hold till a proper pastor be provided for it. This may be temporary for one, two, or three years, or perpetual, being a kind of dispensation to avoid the vacancy of the living, and is called a *commenda retinere*. There is also a *commenda recipere*, which is to take a benefice *de novo*, in the bishop's own gift, or the gift of some other patron; and this is the same to him as institution and induction are to another clerk; but, by the recent regulations, the practice of holding of livings *in commendam* is to be abolished. 4.—By resignation; but this is of no avail till accepted by the ordinary, into whose hands the resignation must be made. 5.—By deprivation: either, first, by sentence declaratory in the ecclesiastical courts, for fit and sufficient causes allowed by the common law, such as attainder of treason or felony, or conviction of other infamous crime in the King's courts; for heresy, infidelity, gross immorality and the like: or, secondly, in pursuance of divers penal statutes, which declare the benefice void for some non-feasance or neglect; or else some malfeasance or crime, as for simony, for maintaining any doctrine in derogation of the King's supremacy or the Thirty-nine Articles, or of the Book of Common Prayer; for neglecting after institution to read the liturgy and articles in the church, or make the declarations against popery, or take the abjuration oath; for using any other form of prayer than the liturgy of the Church of England; or for absenting himself sixty days in one year from a benefice belonging to a popish patron, to which the clerk was presented by either of the universities; in all which and similar cases the benefice is *ipso facto* void, without any formal sentence of deprivation.—(*Blackstone*, Book I., cap. 11.) And by the Act 57 Geo. III., c. 99, if a

benefice be under sequestration for two years for non-residence it may be declared void by the bishop.

*Curates.*—Curates are the lowest order of the clergy. They are either perpetual or stipendiary, and are appointed to their cures by mere nomination in writing. They must, however, be in orders and licensed by the bishop of the diocese. It is necessary for them to take for the most part the same oaths, and to make the same declarations, on being appointed to their curacies, as rectors and vicars on admission to their benefices. Stipendiary curates are such as are appointed by the non-resident, and, indeed, in some cases by the resident, incumbents, to officiate at their parish churches in their stead, and their duties consequently are much the same. As their name implies, stipendiary curates are paid by a salary allowed by the person appointing them, which, by the 57 Geo. III., c. 99, should in no case be less than 80*l.* per annum; and where the population of the parish amounts to 500, 150*l.*; provided the income of the benefice itself amounts to that sum, and the incumbent was admitted after 20th July, 1813. The bishop, however, may dispense with salaries of that amount, should circumstances render it advisable. And we are sorry to have to state that it appears from the Parl. Paper (No. 235, Sess. 1846,) already referred to, that, in 1844, of a total number of 4,770 curates, the salaries of no fewer than 1,558 were below 80*l.* a-year. It is the duty of the bishop to see that all churches are duly served within his diocese; and if a curate be not appointed, he may appoint one, or compel the incumbent to do so by the provisions of this Act. Perpetual curates are such as are appointed to the churches of those parishes in which, as already mentioned, the tithes were appropriated to some monastery before the statute 4 Henry IV., making it necessary to endow a vicar, or which had, from some cause or other, escaped its operation; or they are such as officiate in some chapel. Chapels are of three kinds:—1, chapels of ease; 2, parochial or district chapels; and 3, free chapels. Chapels of ease and parochial chapels are those in which divine service is performed for the convenience of the inhabitants of some particular hamlet within a parish at a distance from the parish church. The only difference between them seems to be that the latter perform some of the rites more particularly belonging to a parish church, being allowed a font, sacraments, and burials, whence their name parochial, while such as are strictly chapels of ease can perform the divine service only. In both, however, it is usual for a reservation to be made for the inhabitants of the township which has the chapel to contribute to the repairs of the parish church, in order to preserve the subordination. When parishes have been united in consequence of their poverty, or from other reasons, the church of one only of the united parishes thenceforth becomes the mother church of the whole union: the others may be considered as perpetual curacies. In these the curates are usually paid by some fixed payment, or by a portion of the tithes appropriated for their maintenance at the foundation of the chapel. Curates, however, with exception of these, who appear even after the union to retain the corporate character of the previous rector or vicar, and curates of such chapels as have been augmented by Queen Anne's bounty, have no corporate character, and, in consequence, have not, like an ecclesiastical rector and vicar,

*The Classification of the Incomes of the Incumbents is as follows:—*

| Incomes. |              | Benefices. | Incomes.           |         | Benefices. |
|----------|--------------|------------|--------------------|---------|------------|
| £.       | Under .      | £.         | £.                 | Under . | £.         |
|          | 50           | 297        | 400 and under      | 500     | 830        |
|          | 50 and under | 1,629      | 500 —              | 750     | 954        |
| 100      | —            | 1,602      | 750 —              | 1,000   | 323        |

| 300      | —            | 1,326      | 2,000 and upwards. |         | 18*        |

The Commissioners have stated some of the principal results of their inquiries as follows:—

“ From the returns of our inquiries, arranged and digested in the tabular statements before mentioned, it appears that the total amount of the gross annual revenues of the several archiepiscopal and episcopal sees in England and Wales is 181,631*l.*, affording an average of 6,727*l.*; and the total amount of the nett annual revenues of the same is 160,292*l.*, affording an average of 5,936*l.*

“ The total amount of the gross annual revenues of the several cathedral and collegiate churches in England and Wales is 284,241*l.*, and the total amount of the nett annual revenues of the same is 208,289*l.*

“ The total amount of the gross annual separate revenues of the several dignitaries and other spiritual persons, members of the cathedral and collegiate churches in England and Wales, is 75,854*l.*; and the total amount of the nett annual separate revenues of the same is 66,465*l.*

“ The total number of benefices, with and without cure of souls, the incumbents whereof have made returns of our inquiries, omitting those which are permanently or accustomably annexed to superior preferments, and which are included in the statements respecting those preferments, is 10,540. The total amount of the gross annual revenues of these benefices is 3,197,225*l.*, giving an average income of 303*l.*; and the total amount of the nett annual revenues of the same is 3,004,721*l.*, giving an average income of 285*l.*

“ The total number of benefices, with and without cure of souls, in England and Wales, including those not returned to us, but exclusive of those annexed to other preferments (about 24 in number), is 10,718; the total gross income of which, calculated upon the average of those returned, will be 3,251,159*l.*, and the total nett income thereof will be 3,055,451*l.*

“ The total number of curates returned to us as employed by resident incumbents is 1,006, whose annual stipends or payments in money amount to 87,075*l.*, affording an average of 86*l.* Those employed by non-resident incumbents are 4,224; the amount of their stipends 337,620*l.*, and the average 79*l.* And the average of the whole of the curates' stipends is 81*l.*”

\* There are only two livings of 4000*l.* a-year and upwards—the rectory of Stanhope, in Northumberland, of the nett annual value of 4843*l.*; and the rectory of Doddington, in the county of Cambridge, of the nett annual value of 7306*l.* There are only three livings worth from 3000*l.* to 4000*l.* a-year.

*Churchwardens.*—These are the guardians or keepers of the church, and representatives of the body of the parish. They are sometimes appointed by the minister, sometimes by the parish, sometimes by both together, as custom directs. They are taken, in favour of the church, to be for some purposes a kind of corporation at common law; that is, they are enabled by that name to have a property in goods and chattels, and to bring actions for them, for the use and profit of the parish. Yet they may not waste the church goods, but may be removed by the parish, and then called to account by action. There is, however, no method of effecting this, without first removing them, as it cannot legally be done except by those who are put in their place. They have no sort of interest in lands or other real property, as the church, church-yard, &c.; but if these be damaged, the parson or vicar has an action. The churchwardens repair the church, and make rates and levies for that purpose, with consent of the parishioners, unless, indeed, the latter neglect or refuse to attend the meeting when the assessment is imposed. These rates are recoverable only in the ecclesiastical courts; or before justices of the peace when the sum payable is under 10*l.* (53 Geo. III.)

*Parish Clerks and Sextons.*—Parish clerks and sextons are regarded by the common law as persons who have freeholds in their offices, and therefore, though they may be punished, they cannot be deprived, by ecclesiastical censures. The parish clerk was formerly very frequently in holy orders, and some are so at present. He is generally appointed by the incumbent, but by custom may be chosen by the inhabitants; and if such custom appear, the Court of King's Bench will grant a *mandamus* to the archdeacon to swear him in; for the establishment of the custom turns it into a temporal or civil right.

*Deficiency of Church Accommodation.*—Nothing, according to the Ecclesiastical Commissioners, has done so much "to cripple the energies of the established church, and circumscribe its usefulness, as the want of churches and ministers in the large towns and populous districts of the kingdom. The growth of the population has been so rapid as to outrun the means possessed by the establishment of meeting its spiritual wants; and the result has been that a vast proportion of the people are left destitute of the opportunities of public worship and Christian instruction, even when every allowance is made for the exertions of those religious bodies which are not in connection with the established church." (Second Report, p. 6.)

The Commissioners subjoin some details illustrative of this statement, and showing the efforts that have been made by the public, and by private associations and individuals, for obviating the evil. But, according to them, "all that has hitherto been done in this way falls very far short of the necessity of the case." They further state that the revenues of the established church, however husbanded or distributed, are quite inadequate to meet the exigencies of the case; and if so, there is, we apprehend, but little prospect of its being materially relieved: for it is not to be supposed that the Dissenters should willingly submit to be taxed for the erection and endowment of new churches; and unless they did so, the church would, it is probable, be

more injured by such a tax, than by the continued existence of the present deficiencies. Very large sums have, however, been subscribed to supply the deficiency in question.

### SECT. 2.—*English Dissenters.*

In the estimation of the law all persons are regarded as dissenters whose religious principles, or modes of worship, differ in any degree from the standards of the church of England. The principal classes of dissenters are denominated methodists, independents, baptists, presbyterians, catholics, &c. ; but these are subdivided into many subordinate classes, the differences between one class and another, and between certain classes and the church of England, frequently depending on minute points which it is sometimes very difficult, if not impossible, to define. The civil disabilities under which dissenters used to labour have been almost entirely obviated by the repeal of the test and corporation acts, in 1828.

1. *The Methodists* originated between 1730 and 1740. They are divided into two great bodies—the followers of Wesley, and the followers of Whitfield, clergymen of the church of England, and the founders of the sect. The creed of the Wesleyan methodists is Arminian, and they pretend to differ in few respects from the church of England. Wesley, indeed, always objected to his followers being classed with dissenters, and required them to attend the established church when they had no opportunity of hearing their own preachers, and there to communicate. Hence, they ought more properly, perhaps, to be called separatists than dissenters. In fact, there is a large body of people who seem to fluctuate between them and the establishment. The Wesleyan methodists are very numerous, especially among the lower classes. They are spread over the whole kingdom, but are particularly abundant in Yorkshire, Lancashire, Lincoln, and Cornwall. The religious affairs of the body are managed by a “conference,” or assembly, consisting of such of their clergymen as choose to attend.

The creed of the other leading division of the methodists, or of the followers of Whitfield, is Calvinistic. They are not very numerous, except in Wales, where they are extensively spread over the country, outnumbering, in many places, the adherents of the established church.

The total number of all descriptions of methodists may, probably, amount to about 1,400,000.

2. *Independents or Congregationalists.*—This class of dissenters maintain, as their name implies, the independency of each congregation or society of Christians, and their right to elect their clergyman, and to lay down rules as to discipline, &c, without being subject to any external control. They were established in England in the 16th century ; but they subsequently underwent much persecution. At the æra of the Revolution they were a comparatively small body ; but they have rapidly gained ground since the middle of last century, particularly at the expense of their old enemies, the presbyterians, from whom they have drawn many recruits. This body now comprises

above 1,800 congregations. Many of their churches are elegant ; and not a few of their clergymen have been distinguished in the present century, as well as in former times, for their learning and ability.

3. *Baptists, or Anabaptists*, are those who contend that baptism is to be administered to adults only, and that not by sprinkling, but by immersion. They are farther subdivided into several subvarieties, as *particular or Calvinistic, general or Arminian, &c.* They are pretty generally distributed over the whole kingdom, having in all about 1,200 congregations. The greater number of their clergymen are educated at an academy at Bristol.

4. *Presbyterians*.—These derive their name from rejecting the episcopal and independent, and adopting the presbyterian form of church government. During the civil wars they were very powerful in England ; and, at one time, there appeared to be much probability that the established religion of the kingdom would assume the presbyterian form. But this not having taken place, they have since gradually declined. Originally their opinions were highly Calvinistic ; but in this respect, also, they have materially varied ; some congregations being Arminian, others Arian, and others Unitarian. A few presbyterian churches are in communion with, and adhere to, the standards of the church of Scotland ; but, except in the northern counties, their number is inconsiderable. At the commencement of last century, the presbyterians were much more numerous than the independents ; but, at present they are said not to muster more than 200 congregations, and some of them very small.

The clergymen in and about London, of the independent, baptist, and presbyterian dissenters, are associated together in a body called the clergymen of the *three denominations*. Their meetings are held in Dr. Williams' library, in Red Cross-street. The business of the association has been long confined to the discussion of matters connected with the political condition and circumstances of the dissenters.

5. *Quakers or Friends*.—This sect is not very numerous, nor is it increasing. Quakers are principally to be found in Yorkshire, Lancashire, and Cumberland. Not a few of the wealthier individuals belonging to the sect have laid aside the peculiar dress and phraseology by which its adherents are commonly distinguished.

6. *Catholics*.—Owing to the late extensive immigration of Catholics from Ireland, their numbers have rapidly increased within the present century. They are most numerous in Lancashire, particularly in Manchester and Liverpool, where they constitute a large class of the population. According to the details given in Mr. Lewis's valuable Report on the state of the Irish poor in Great Britain, there were in Liverpool, in 1800, 4,950 Irish Catholics ; in 1820, 11,016 ; and in 1833, no fewer than 24,156 ! The Irish Catholics in Manchester, in 1833, were estimated at about 30,000. In Birmingham, in the same year, they amounted to between 5,000 and 6,000. The number of Irish Catholics in London has been said to be as great as in Liverpool or Manchester ; but we are not aware of the data on which this estimate has been made.—(*Report on the Irish Poor*, p. 7.) The English Catholics are most numerous in Lancashire, Yorkshire, Staffordshire, and Warwickshire ; and are pretty widely diffused over Northumber-

land and Durham, some of the principal families of which belong to their communion.

7. *Jews* are to be found in most large towns in England; but by far the greatest number are resident in London. Their total number may be estimated at from 12,000 to 14,000.—(*Encyc. Britannica*, art. *Jews*.)

Exclusive of the above there are a great variety of other sects; but most of them have but few adherents.

*Number of Dissenters.*—There are not, we regret to say, any materials in existence by which to frame any tolerably accurate estimate of the number of dissenters. The *Congregational Magazine* for January, 1836, contains a table, which appears to have been compiled with much care, of the number of congregations belonging to the leading classes of dissenters in the different counties of England and in Wales, with the population, and the number of places of worship belonging to the Established Church. We subjoin this table:—

*Table exhibiting the Population of each County of England and Wales in 1831, the Number of Dissenting Congregations in each, and the Number of Congregations belonging to the Established Church.*

| Counties.                    | Population. | Number of Dissenting Congregations in each County. |               |              |          |                        |                     |                  |         |                          |       | Total Dissenters. | Episcopals. |
|------------------------------|-------------|----------------------------------------------------|---------------|--------------|----------|------------------------|---------------------|------------------|---------|--------------------------|-------|-------------------|-------------|
|                              |             | Roman Catholic.                                    | Presbyterian. | Independent. | Baptist. | Calvinistic Methodist. | Wesleyan Methodist. | Other Methodist. | Quaker. | Hume and other Stations. |       |                   |             |

Supposing this table to be nearly accurate, it shows that the dissenting congregations are, to those belonging to the church, as 84 to

118, or as 42 to 59. But we should err egregiously if we imagined that the number of individuals belonging to the dissenters and the church were in anything like this proportion. Generally speaking the dissenters, particularly the Methodists, are much more strict and regular in their attendance at divine service than the members of the Established Church. The latter, indeed, include a large class, partly consisting of the upper and partly of the lower and middle orders, who are but little scrupulous in their observance of the ordinances of religion. Many, too, of the dissenting congregations are extremely limited; and, though some of them be numerous, yet, at an average, they are small compared with those belonging to the church. On the whole, we incline to think that the entire number of dissenters in England and Wales does not exceed 3,000,000, or at most 3,500,000, of whom from 550,000 to 650,000 may be Catholics.

### SECT. 3. — Church or Kirk of Scotland.

*Rise of Presbytery in Scotland.*—The reformation from Popery began at an early period in Scotland, but made little progress till the time of John Knox, who commenced his career as a reformer in 1542.\* On the 24th of August, 1560, Popery was abolished in Scotland, and the Protestant religion established by Act of Parliament. At this time it was necessary for the reformers to substitute a new system of ecclesiastical polity in the place of that which had been abolished. Knox had studied under Calvin at Geneva; and hence the Genevan or *presbyterian* form of ecclesiastical polity was introduced and established in Scotland. This system was embodied in a work, now entitled *The First Book of Discipline, or the Policy and Discipline of the Church*, and was laid before Parliament in 1560 as a necessary accompaniment to the legal constitution of the reformed national church: though not formally ratified by the Legislature, it was subscribed by many of its members; while some of them denominated it “a devout imagination.” It was submitted, in the same year, to the general assembly of the church at Edinburgh, by which it was approved. But, though Parliament did not ratify the ecclesiastical system of polity contained in *The First Book of Discipline*, it accepted and confirmed the *confession of faith* drawn up by Protestant ministers, the object of which was not so much to establish the reformed doctrines, as to abjure Popery; and hence it is called the *negative confession*. Another *confession of faith*, or *national covenant*, as it was called, was drawn up, ratified, and subscribed in 1580 and 1581, and on subsequent occasions.

The question of ecclesiastical polity being still undecided by the Legislature, Episcopacy, which received the support of the sovereign, and of many of the most powerful families, and Presbyterianism, which was embraced by the great body of the people, struggled for some years for superiority. The Presbyterians having at length obtained the ascendancy, the General Assembly, in 1578, gave its sanction to what is known in history as *The Second Book of Discipline, or Heads and Conclusions of the Policy of the Kirk*, which, having thus become ecclesiastical law, was engrossed as such in the registers of the Assem-

\* Born in 1505, died in 1572.

bly that met in 1581, and has since continued to form the basis of the polity of the established Presbyterian Church of Scotland. This Assembly first divided the country into presbyteries and synods (1581); a measure taken at the express desire of the King (afterwards James I. of England), who, harassed by the unsettled state of religion, addressed a letter to the Assembly, urging that court to adopt some form or order as to the church, which might be permanent.

The establishment of Presbytery was not acceptable to the King, and it did not obtain the sanction either of the Privy Council or Parliament. Indeed, Episcopacy was within three years re-established by Parliament; Presbytery declared illegal; and the Presbyterian ministers obliged to expatriate themselves, or to submit to persecution at home.

But, though proscribed, the Presbyterians made such strenuous exertions in support of their views, and so plied the King with petitions and remonstrances, that, at length, he was forced to yield. Accordingly, on the 5th of June, 1592, the Presbyterian form of church government received, for the first time, the sanction of Parliament, and was established by law as the national church. To remove every obstacle to the full influence of the Presbyterian ministers, they were provided with manses (parsonage-houses) and glebes, even at cathedral churches.

This Act of the Legislature, however, had not long passed till means were adopted, both by the court and in other quarters, to undermine the established religion, and to introduce prelacy in its stead. This was ultimately accomplished in 1606; from which time till 1638, when the popular voice again predominated, Episcopacy prevailed; Presbytery was proscribed; and its members persecuted or banished. But in the last-mentioned year the tide of affairs turned: the General Assembly met at Glasgow, and re-established Presbytery, which, two years afterwards, received the sanction both of the King (Charles I.) and of Parliament.

Presbytery kept its ground, embracing the great body of the people, till the Restoration in 1660, when Episcopacy regained the ascendancy, which it maintained, though at the expense of an atrocious persecution, till the Revolution in 1688: soon after which it was abolished, and the national church of Scotland finally established on the Presbyterian plan. The statute of 1592 was taken as the model; and the enactments that had been passed by the various General Assemblies since that period, particularly in the Assembly of 1638, were confirmed: the Act of William and Mary, re-establishing Presbytery, passed in 1690.

*Standards of the Church.*—The Scotch church sent five ministers and three elders as delegates to the Assembly of Divines which met at Westminster in 1643, and to this Assembly it is indebted for a Directory of Public Worship, a Form of Ordination, the Larger and Shorter Catechism, and the Confession of Faith: all of which were adopted by the General Assembly, and declared by the Scotch Parliament to be agreeable to the word of God. These, though they did not continue long in force in England, are still valid in Scotland, and form the standards of the doctrine and discipline of the Presbyterian

church. The doctrines of that church are strongly Calvinistic, the leading tenets being predestination, original sin, particular redemption, irresistible grace, justification by faith, and the perseverance of the saints. Its form, as already stated, is presbyterian, episcopacy being regarded by the bulk of the people with the greatest aversion.

*Parishes.*—Every parish in Scotland has a resident clergyman; residence being obligatory by law so early as 1563. But in parishes which include burghs, and in city parishes, the church is often collegiate, that is, has the services of two clergymen, who preach alternately in the same church. The number of collegiate churches is 27: the whole number of parishes is 1023; so that, including the collegiate charges, the number of clergymen is 1050. The number of parishes has not been invariable. Two, and sometimes three, small parishes, lying contiguous to each other, have occasionally been united into one; and new parishes, particularly in cities and the larger towns, have been erected. But as many difficulties attend the erection of new parishes, the inconvenience of large parishes has been obviated in the two following ways. 1. Missionaries, being first ordained as clergymen, are appointed to certain localities with the privileges *quoad spiritualia* of parochial clergymen, except that they cannot be constituent members of any of the church courts, and cannot even have sessions of their own. In 1833, however, these localities were, by an act of the General Assembly, converted into parishes *quoad sacra*, and the clergymen were invested with all the rights and privileges of parish ministers, and declared constituent members of the ecclesiastical courts. But it has since been found by the courts of law that the Assembly had no power to pass such an Act; and these ministers have been reduced to their original rank of ordained missionaries. Their incomes differ in different places, but never exceed 100*l.*, and often do not amount to half that sum. They are paid out of a sum of 2000*l.*, granted yearly by Her Majesty, and called the "Royal Bounty." 2. The institution of *chapels of ease*, or subsidiary places of worship, without any assigned locality. The ministers of these chapels (the first of which was erected in 1798) are paid out of the seat rents, a *minimum* stipend being generally guaranteed to them by the managers of each chapel; but though in full orders, like the parliamentary ministers, and entitled to perform every sacerdotal function, they have no sessions of their own, nor are they members of any church court. These chapels amounted to 66; when, in 1834, the General Assembly conferred on them the same rights and privileges which belong to parish ministers, and appointed them to certain localities *quoad sacra*. But this Act, like the former, having been declared incompetent on the part of the church, was repealed in 1843. There are now (1846) about 200 such chapels. But as many of them are not yet supplied with clergymen, their exact number cannot be specified. The General Assembly applied (1834 to 1836) to Government for endowments, not only for the chapels already built, but for all those that may hereafter be erected, but without effect. The legislature, however, passed a law in 1844 to the effect, that if a bare majority (not three-fourths, as formerly) of the landowners of a parish agreed to disjoin such parish into one or more ecclesiastical districts, and

if from teinds or otherwise they secured a competent income for the benefice, new parishes might, in every such case, be erected. But this statute, though it removed many of the difficulties that formerly attended the subject, and greatly facilitates church extension, has not yet been carried into effect in any part of Scotland.

*Church Judicatories.—Kirk Session.*—The Kirk Session is the lowest court. It is composed of the minister of the parish and of lay-elders. New elders are chosen by the Session; but their names being read from the pulpit at least ten days before their ordination, the congregation have the power of objecting to them; and, if the objection be found valid they are not inducted. An elder, on his ordination, declares his implicit assent to all that is contained in the Confession of Faith, and signs the standards of the church. The minister and two elders form a session; but the session generally comprises a greater number of elders: a dozen is reckoned a pretty ample session. The minister is officially *moderator*, or president of the session; and a session cannot exercise any judicial function, unless the meeting be constituted by prayer, either by the parish minister, or some other minister officiating in his stead. The session takes cognisance of cases of scandal, administers the poors' funds (which in the majority of the parishes of Scotland consist solely of the collections at the church doors), and superintends the ecclesiastical discipline of the parish. The elders visit the sick, each in a given district. The decisions of the session may be appealed from to the presbytery, the next court in dignity.

*The Presbytery* is composed of an indefinite number of representatives from contiguous parishes. The largest number of parishes in any presbytery (that of Edinburgh) is 34; the smallest number is 6. A presbytery consists of the ministers of all the parishes within its limits; of the professor of divinity, if there be any university within the same; and of a lay-elder from each parish. Hence, if no church be collegiate, and if there be no professor of divinity, the number of ministers and elders in any meeting of presbytery will be equal. A moderator or president, who must be a clergyman, is chosen twice a year. The presbytery takes young men on trials as students of divinity, and candidates for license; ordains presentees to vacant livings; has the superintendence of religion and education within its precincts; sits in judgment on the conduct of its members, and may depose them. But its decision is not final, an appeal lying to the synod. A presbytery generally meets once a month; it must necessarily meet at least twice a year. It may continue its sittings as long as necessary, and may hold *pro re natâ* meetings. There are at present 80 presbyteries.

*The Synod.*—A synod is composed of two or more presbyteries. It comprises every parish minister within its limits, and the elders who have last represented the different sessions in presbytery; so that the number of ministers and elders may be equal. Neighbouring synods correspond with each other by sending a minister and elder, who form constituent members of the synod to which they are sent. At every meeting a moderator, or president, who must be a clergyman, is chosen; who delivers a sermon at the opening of the synod. This court meets

ministers and one elder ; all presbyteries consisting of 24 parishes or under, but above 18, shall send four ministers and two elders ; all presbyteries consisting of 30 parishes or under, but above 24, shall send five ministers and two elders ; and all presbyteries, whose number exceeds 30, shall send six ministers and three elders."—(*Acts of Assembly*, 1694, and 1712.)

The General Assembly is attended by a nobleman as representative of the sovereign, under the title of Lord High Commissioner. But this high functionary used to be, and to some extent still is, an object of suspicion. He takes no part in the proceedings of the court, and has no voice in its deliberations ; even his presence is not necessary. When from any cause he is unable to attend, the business of the court proceeds, notwithstanding his absence. The church has always claimed the right of meeting, both in its supreme and inferior judicatories, by its own appointment ; and occasions have occurred (particularly in 1638 and 1692) when, though the commissioner dissolved the Assembly, it continued to sit, and appointed the day when the next Assembly should be held. But though apparently incompatible, the civil and ecclesiastical authorities, have not come into collision for the last 160 years, and, under ordinary circumstances, sufficiently harmonise. When the business of the Assembly is concluded, the moderator addresses the court, and, in the name of the Lord Jesus Christ, the king and head of his church, appoints another Assembly to be held on a certain day in the following year. The Lord High Commissioner then also addresses the court, and, in the name of the sovereign, appoints another assembly to be held on the day mentioned by the moderator.

The Assembly chooses a moderator for every meeting, who, in recent times, has been always a clergyman. But at an early period laymen (for example, George Buchanan and Andrew Melville,) occasionally filled the chair.—(*M' Crie's Life of Knox*, vol. ii. p. 282.)

*Course of Study for the Church.*—The course of study for the church extends to eight years at one or other of the universities of Scotland. Of this period, the first four years are devoted to literary and philosophical study, comprising Latin and Greek, logic and metaphysics, ethics, mathematics, and natural philosophy ; the other four years to Hebrew, church history, and theology, biblical, exegetical and systematic. During these last four years the students must attend both Hebrew and Church history for two sessions ; but theology, which cannot occupy less than four years, may be extended to five : the regular time is three full years and a partial one ; but the student, at his own option, may take five years, that is, two full years, and three partial ones. During his theological course, exclusive of his exercises as a student of Hebrew and church history, he has to deliver to the professor of divinity five discourses ; namely, an exegesis, in Latin, a homily in English, an exercise and addition, a lecture on some portion of Scripture, and a popular sermon. Before entering on his theological course, the student is examined by the presbytery, within whose limits he resides : and it has recently been resolved by the General Assembly that such examination be annual.

After this routine of study, which must be duly certified, the student is taken "on trial" for license by the presbytery, before which he has,

in addition to the usual examination, to deliver five discourses as above, on subjects prescribed by the court. If the presbytery find him unqualified, they may reject him, appoint him to new trials, or remand him to his studies: if he pass, he obtains license as *probationer*, or preacher of the Gospel; and thus becomes qualified to perform all ministerial functions, except dispensing the sacraments of baptism and of the Lord's Supper, and celebrating marriages. He may now be presented to a parish, or other benefice; on his appointment to which he is ordained by the presbytery.

*Patronage.*—Lay patronage, or the right of nominating to a vacant parish by a lay patron, has generally, though with modifications, been the law of the church. From 1690, however, to 1712, patronage was abolished; the right of presentation being lodged in the landholders (*heritors*) of parishes and the members of their kirk sessions. Patronage was revived in the year last specified; and continued uninterrupted till 1834. A slight appearance of popular rights, in respect to the reception or rejection of a presentee, was preserved, but rather in name than in reality. After a presentation had been found valid by the presbytery, the presentee was appointed to preach in the vacant church for one or more Sundays; and a day was fixed, posterior to his preaching, on which a *call* was to be given him by the people, or as the phrase is, was to be *moderated in*; notice to that effect being given from the pulpit. At that meeting, after sermon by a member of presbytery, the parishioners were invited to subscribe a written call to the presentee to be their future minister. At one period the call was essential to a presentation, but its efficacy was gradually given up; till, at length, without any alteration being made in the law, it fell into desuetude; that is, a presentation was reckoned valid, if a single name, or perhaps not even a single name, was attached to it. This state of things having occasioned many violent intrusions of clergymen, and given general dissatisfaction, was changed, as above hinted, in 1834; when an effort was made not only to restore the efficacy of the call, but to place it on a firmer foundation than ever. "If," to use the words of the Act of Assembly, "at the moderating in a call to a vacant pastoral office, the major part of the male heads of families, members of the vacant congregation, and in full communion with the church, should disapprove of the person in whose favour the call is proposed to be moderated in, such disapproval shall be reckoned sufficient ground for the presbytery rejecting such person, and he shall be rejected accordingly." The Act farther declared, "that no person shall be held to be entitled to disapprove as aforesaid, who shall refuse, if required, solemnly to declare in presence of the presbytery, that he is actuated by no factious or malicious motive, but solely by a conscientious regard to the spiritual interest of himself and the congregation." This statute was known by the name of the *Veto Act*. But its validity having been disputed, it was set aside by a judgment of the House of Lords in 1839; an event that was speedily followed by the establishment of the *FREE CHURCH*. (See *post*.) Soon after this event took place, Parliament (August 17th, 1843,) passed an Act, commonly called Lord Aberdeen's Act, for removing doubts respecting the admission of members to benefices in the Scottish church, which, had it been sooner

enacted, might, perhaps, have prevented the disruption. This statute enables one or more parishioners, being members of the congregation, to state objections to the presentee, "in respect to his ministerial gifts and qualities, either in general, or in reference to that particular parish;" of which objections the presbytery or other church judicatory are to be the judges, who, in coming to a decision on the subject, are to "have regard to the whole circumstances and condition of the parish, to the spiritual welfare and edification of the people, and to the character and number of the persons by whom the said objections or reasons shall be preferred:" and if the result be unfavourable to the presentee, "as not being a qualified and suitable person for the functions of the ministry in that particular parish," such deliverance must set forth and specify "the special ground on which it is founded." This Act has hitherto worked well, and seems to give satisfaction to all parties. The right of patronage, it may be observed, is private property; and may be sold or alienated like other property. The patronage of about a third part of the parishes of Scotland is vested in the Crown.

*Teinds or Tithes.*—The income or stipend of the ministers of the church of Scotland (exclusive of the ministers of the *quoad sacra* parishes already noticed) is derived from the wreck of the tithes, or *teinds* as they are commonly called, that belonged to the Catholic hierarchy. On the Reformation, teinds and other church property suffered much dilapidation; the greater part having been seized upon by the nobility and higher gentry. A small portion only has since been devoted to the maintenance of religion. In 1561, by an act of the Privy Council, a third part of the ecclesiastical revenue was given to the church; but of this third, no small portion "was discharged by the Queen [Mary] or bestowed in pensions on favourites of the court."—(*Connel on Teinds*, vol. i. p. 150.) The highest stipend that was given was 300 marks Scots, about 16*l.* sterling; but the majority of ministers got only 100 marks. Various modifications and changes, none of them favourable to the clergy, many of whom were literally starving, afterwards took place with regard to this paltry allowance, till 1617, when the *maximum* stipend was fixed by Act of Parliament at 1000 marks, or 10 chalders of corn or *victual*; the *minimum* at half that amount, "except where the whole fruits of the kirk will not extend to that quantity."—(*Ib.*) But the greatest change which teinds in Scotland has undergone, took place in the reign of Charles I., who revoked the whole ecclesiastical grants (except the church lands) conferred by his father on his subjects. This revocation being made, though with difficulty, it was provided that the teinds, except such as were appropriated to the payment of stipend, should be valued and sold. The landholders were entitled to sue for a valuation or *modus*, and to purchase the teinds of their own estate. The valuation was devolved on commissioners and sub-commissioners, the latter of whom itinerated. A body of commissioners was maintained for this purpose from the reign of Charles I. to the Union in 1707; at which time the Court of Session was authorised to supply their place, and to determine in all cases of valuation and sale of teinds. (See *ant.*, p. 222.) As the commissioners had been empowered to vary the stipends of the ministers, the same right was transferred to the Court of Session. The

burden of building parish churches and manse, and keeping them in repair, also devolves on the proprietors of land, according to the valued rental of their several estates.—(*Act of Convention*, 1670. c. 8.—*Connel on Teinds*.)

A clergyman is entitled to apply to the Court of Session for an augmentation of his stipend, which it is competent for that court either to grant or refuse. But 20 years must elapse before such application can be renewed. On all lands not valued, the teind when valued (which is likely to be done on an augmentation of the minister's stipend,) is fixed at the fifth part of the existing rental. The ministers of Edinburgh and Montrose are paid, not by teinds but by a local tax levied on the occupiers of houses.—(*Ib.*)

*Manse and Glebes*.—A minister, as previously stated, is entitled to a parsonage-house, or manse, and a glebe. The statutory *minimum* allowance for building a manse, is 1000 marks. But generally ten times that sum or more is given; manses being mostly built on an improved style of accommodation, and fully suitable to the income and rank of a clergyman. The *minimum* legal size of a glebe is four arable acres, with grass or pasture for a cow and two horses. But glebes are seldom, if ever, confined to that size; being generally twice or three times as large. The minister of a royal burgh has no legal claim to a glebe; and it is not a settled point whether he is entitled to a manse, though he frequently enjoys both; generally the latter, or a sum in its stead.—(*Dunlop's Parochial Law*, chap. ii.)

*Income of the Clergy*.—The exact income of the clergy cannot be ascertained; but a near approximation to it may be made. Except in parishes where the teinds are exhausted, and they are paid a fixed money stipend, their income is measured by the price of corn as fixed by the *fiars* struck annually in February, and determined by the average price for the preceding three months. Stipends, consequently, oscillate in amount. In country parishes, where there are unappropriated teinds, they are nearly equal; but in royal burghs, or in parishes of very great population, they are higher. In several parishes the teinds have been exhausted, and are all appropriated to the incumbent, without yielding him an income of 158*l.* 6*s.* 8*d.*, including an allowance for communion elements. To raise them to this minimum amount, the Act 50 Geo. III. set apart a sum not exceeding 10,000*l.* a year, with a farther sum of 2,000*l.* a year, to raise the stipend of such clergymen as cannot, according to law, be provided with manses and glebes, to 200*l.* The parishes so assisted are called Bounty Livings. Their number is 196; of which the highest receives from Government 144*l.* 18*s.* 10*d.*; (the teinds producing only 13*l.* 7*s.* 10*d.*); and the lowest 11*s.* 7*d.* There are 17 parishes that receive above 100*l.*, and 25 that receive under 20*l.*—(*Record in Teind Court*.—*Peterkin's Supplement*.)

The aggregate amount of the whole teinds of Scotland appropriated to the payment of stipend (taking the average of the seven years preceding 1835), is 177,471*l.* 17*s.* 2*d.*; to which add 12,000*l.* annually granted, as above stated, by Government; and the result will be 189,471*l.* 17*s.* 2*d.*; which revenue, taking the number of incumbents at 943 (that is, including the collegiate members, but not the ministers of the *quoad sacra* parishes), affords an average income to each in-

cumbent of 200*l.* 18*s.* 5½*d.* a year, exclusive of manse and glebe.— (*Report of Church Commissioners*, vol. iii.) The gross ecclesiastical income of the Church of Scotland, including that of the *quoad sacra* livings, will not exceed 200,000*l.*

But, as already stated, the teinds applicable to the support of the church are not all exhausted. They are exhausted in 196 parishes, without making up the stipends of the clergymen to 158*l.* 6*s.* 8*d.* the deficiency being supplied by Government. They are exhausted also in 206 other parishes; but as in these they yield upwards of 158*l.* 6*s.* 8*d.* of stipend, no aid is required from or given by the Exchequer. In the remaining parishes they are unexhausted, leaving altogether a clear surplus of 124,318*l.* 12*s.* 11*d.* These unexhausted teinds are held by different parties, by heritors or landholders, by the Crown, and by the Universities; and are liable to be charged with future augmentations of stipends, according as the Court of Teinds may determine.

If any legislative grants of money are made to the new or *quoad sacra* churches, it is supposed that they will be given out of the Bishops' teinds, which yield about 10,000*l.* a-year.

#### SECT. 4. *Free Church.*

At present, as previously seen, and since the reign of Queen Anne (1712), the privilege of appointing clergymen to parishes has been vested in the Crown or in private patrons, with the proviso that they must be selected from among those who have gone through the course of study prescribed by the church, and been examined and licensed as preachers by a presbytery. The right of patronage has long, however, been exceedingly unpopular. Its enforcement, in despite of public opinion, occasioned the great secession from the church in 1741; and latterly it has become more unpopular than ever. It has been already stated that the General Assembly, by a measure, called the *veto* act, passed in 1834, gave the congregations belonging to parishes a right to reject a presentee, if he were not acceptable to them: but (unfortunately, we think,) it was decided first by the court of session and subsequently by the House of Lords (3rd May, 1839,) that the General Assembly had no power to pass the *veto* act, and that all proceedings under it were null and void. This decision was not, however, submitted to by the majority of the Assembly, by whom it was regarded as a usurpation upon their rights; and no legislative measure having been proposed calculated to allay the public irritation, or to mitigate the extreme exercise of the right of patronage, the leaders of the dominant party in the Assembly determined to secede from the church. Accordingly on the first day (18th May) of the meeting of the general assembly of 1843, the ministers and elders, members of that body, opposed to the right of patronage and in favour of the *veto*, gave in a Protest, stating, among other things, that "The courts of the church as now established, and members thereof, are liable to be coerced by the civil courts in the exercise of their spiritual functions; and in particular in their admission to the office of the holy ministry, and the constitution of the pastoral relation, and that they are subject to be compelled to intrude ministers on reclaiming congregations in opposition to the fundamental

principles of the church and their views of the word of God, and to the liberties of Christ's people." And this protest having been read, the protesters withdrew to a separate place of meeting, and constituted themselves, and such as might afterwards adhere to them, into a body to be denominated the **FREE CHURCH OF SCOTLAND**. The Protest was signed by 125 ministers and 77 elders. But within a few weeks, no fewer than 470 clergymen seceded from the establishment, and joined the Free Church. Of those, 273 were parish clergymen, being above a fourth part of the total number of those belonging to the establishment. The rest were *quoad sacra* ministers. And whatever may be thought of its wisdom, this proceeding sets in a striking light the sincerity and zeal by which the seceders were animated. The voluntary abandonment by so many individuals of their homes and incomes, rather than hold them by compromising what they believed to be a fundamental principle, reflects the highest credit on the Scottish church and character.

As might be expected, the Free Church embraces a large body of lay adherents. In May, 1846, no fewer than 607 churches had been built, or were being built for the accommodation of its members; and many of these had schools in connexion with them. Very conflicting estimates have been formed of the total numbers within the pale of the Free Church; these being exaggerated by its friends, and under-rated by its opponents. On the whole, however, they may perhaps be safely estimated at about 550,000.

Nothing, perhaps, has been so extraordinary, in connexion with the history of this secession, as the zeal and liberality displayed by the public in subscribing funds for the building of churches and the support of the clergy. These amounted, between the 18th of May, 1843, and the 31st of March, 1846, to the very large sum of 1,002,270*l.* 18*s.* 8*d.*, of which not 10 per cent. was unpaid. Additional subscriptions continue to come in. The erection of a handsome college in connexion with the Free Church has been commenced in Edinburgh: and it is intended to build houses (manse) for the accommodation of the clergymen.

But while there is much to applaud in this display of zeal and liberality, we cannot help regarding the late secession as fraught with many inconveniences, and regret that measures were not taken to prevent its occurrence. We said in the former edition of this work, "It were much to be wished that this question were satisfactorily disposed of. No doubt there are numerous difficulties in the way, but they are far from being insuperable; and we are clear that either the privilege of selecting their clergymen should be given to parishes, or that they should be authorised peremptorily to reject any presentee not acceptable to them. The latter, perhaps, would be the least exceptionable mode of disposing of the question; and it might at once be effected by giving the *veto* act of the General Assembly the force of law. This privilege is, in fact, of the very essence of presbytery. It is entirely a popular institution; and it is idle to suppose that those who are conscientiously attached to it should ever approve a system of absolute patronage. That control over the election of clergymen, for which the majority of the clergy and people of Scotland are now con-

tending, is not only right and proper in itself, but is in keeping with the other institutions of the country. All magistrates of boroughs, members of parliament, and other functionaries, are now chosen by popular election; and we have yet to learn why a different practice should be followed in the case of clergymen; and that they, whether acceptable or not, should be thrust upon the public. Such a system is sure, in the end, to destroy itself. To keep it up can serve no purpose, unless it be to lessen the utility of the church, to occasion agitation, and to add to the number of dissenters."

What has since occurred has fully demonstrated the truth of these statements. Had the *veto* act been passed into a law, the disruption of the church would not have occurred; and we believe we may, also, safely affirm that the *veto* would not have been exercised in one case out of twenty. Patrons would have seen the wisdom of deferring (as many of them do at present) to the wishes of congregations, and the *veto* would rarely have been heard of. Now, however, the established church is no longer the church of a decided majority of the people; and has ceased to enjoy much of the respect and influence that formerly belonged to it. Religious animosities and fanaticism have also been widely diffused; so that, on the whole, there is good cause to regret the not giving a legal effect to the *veto* act of the General Assembly.

#### SECT. 5.—*Scotch Dissenters.*

*Secession Church, Origin of.*—Presbytery having, as above stated, been established as the national form of religion, the church continued for a while cordial and harmonious. But owing to an undue exercise of patronage, by intruding a minister on a parish (Kinross), contrary to the declared sentiments of the people, a schism began to appear in 1730. Several ministers, of whom Ralph and Ebenezer Erskine were the leaders, refused to obey the authority of the church courts, as to the induction and subsequent recognition of the intruded clergyman; and after some years of discussion, in the ecclesiastical judicatories, the pulpit and the press, eight ministers were deposed, in 1740, by the General Assembly, and their parishes declared vacant. To these ministers the name of *seceders* was given; and as most of the members of their congregations adhered to them, and others followed, they became the founders of the Secession Church of Scotland. The number of congregations and clergymen belonging to that body rapidly increased, and have continued to increase till the present day.

*Division of the Seceders into Burghers and Anti-burghers.*—The seceders soon split among themselves. On being admitted a burgess in any royal burgh of Scotland, the following oath had to be taken:—"I protest before God and your lordships that I profess and allow with my heart the true religion presently professed within this realm, and authorised by the laws thereof: I shall abide thereat, and defend the same, to my life's end, renouncing the Roman religion called papistry." The ministers of the secession were divided in opinion respecting this oath. One party maintained there was no inconsistency in taking it, inasmuch as they considered the established church professed the true religion, notwithstanding its faults, and though they had

seceded from it: the other party espoused and defended the opposite opinion. A separation, in consequence, took place between them in 1747: the former party being named *burghers*; the latter *anti-burghers*. The two parties continued separate till 1821, when the burghess oath being generally dispensed with, or abolished, they again united, under the denomination of the *United Associate Synod of the Secession Church*. The associate synod now comprises 21 presbyteries, composed of 348 congregations, with an equal number of ministers, there being no collegiate churches belonging to the body.—(*The Rev. John Brown's* (of Haddington) *Hist. Acc. of the Rise and Progress of the Secession.*)

*Number of Seceders.*—On this subject we have no data for forming a correct opinion. It is supposed that, at an average, the number of members or communicants belonging to each congregation is about 400, exclusive of hearers, not communicants, and the children of communicants; and that these two exceed the number of members. Each congregation may therefore be supposed to average about 800 members, &c. In other words, the United Secession Church, including members, hearers, and children not communicants, may embrace a population of about 278,000. Some congregations consist of above 1,200 members, exclusive of hearers and children not communicants: and there are a few that are even larger. Others, particularly those in an incipient state, do not exceed 100; but there are few so small. The synod has recently issued a schedule, addressed to all its members, requiring information on these and other points. In addition to the 348 congregations previously mentioned, the Secession Church maintains, at its own expense, 50 missionary stations throughout Scotland, which are supplied with sermons either every Sunday, or twice or thrice a month; the number of such stations has hitherto been annually increasing. Including the numbers that attend these sermons, the aggregate number of persons belonging to the United Associate Synod cannot be under 320,000. The synod also devotes no inconsiderable portion of its funds (all raised by subscription or church collections “for religious purposes,”) to the propagation of the Gospel in foreign parts. In addition to contributions to this fund, many congregations, particularly in the largest towns, support one or more local missionaries at their own expense. Of the exertions made by this body in support of schools, we shall speak under the proper head.

*Constitution, &c.*—The exposition previously given of the presbyterian polity applies to the associate synod. They have lay-elders, kirk sessions, and presbyteries; but, instead of a general assembly, they meet in synod twice a year, the synod being their supreme court. They abjure patronage; their ministers being chosen by the communicants of each congregation. They have the same confession of faith, and the same standards as the established church: they differ, in truth, from that church chiefly on the question of patronage; but are, generally speaking, stricter presbyterians and more rigid in discipline; they regard any connexion of ecclesiastical with civil rights as Erastian and unscriptural.

*Course of Study for the Ministry.*—The course of study in the secession church is nearly the same as that adopted by the establish-

ment. A student, previously to his admission to the theological seminary, requires to have gone through the same course of study as has been already described. The only exception is, that the study of natural philosophy may be deferred till after commencing the study of divinity, but the student must produce the certificate of the professor of that science, and be examined as to his proficiency in it, before being taken on trials for license. An examination in literature and philosophy, as well as an inquiry into religious and moral character by the presbytery, always precede admission to theological study. All students of divinity must be members in full communion. The secession has four professors of divinity, each giving instruction in one great department of theological science, or explanatory of the duties of the Christian ministry. 1. The professor of biblical literature, who prelects on the history, evidences, and general principles of interpretation of the sacred books, or what the Germans call *Hermeneutics*. 2. The professor of exegetical theology, who gives lectures, and conducts examinations on the more important portions of the sacred volume, particularly on the doctrinal epistles. 3. The professor of systematical theology. 4. The professor of pastoral theology, who instructs the students as to the best mode of conducting the duties of the Christian ministry, giving, also, an abstract of ecclesiastical history. The term of study is five years: the duration of the annual session two months. The students are usually from five to six hours a-day in the class-room. They are committed to the care of the professors of biblical literature and exegetical theology for the first two years; and to the professors of systematic and pastoral theology for the three last years of their course. During the long vacation of 10 months, they are under the care of their respective presbyteries, who call them before them, examine them as to their progress in their studies, and hear and criticise their exercises. The course of trials and examination, both on getting license and on induction to a living, is much the same as in the established church.

*Stipends.*—The stipends of the members of the secession church vary from 70*l.* a-year to 450*l.*: most of them range from 100*l.* to 200*l.*; and we shall not be far off the mark if we take 150*l.*, certainly not less than 130*l.*, as the average. In the country, in addition to the stipend, the minister is generally furnished with a dwelling-house. None of the ministers have, or ever had, a legal bond securing their incomes. An attempt is now being made to raise the minimum stipend to 100*l.*

*Associate Synod of Original Seceders.*—This body separated from the burgher denomination in 1806, in consequence of the opinions held by the latter respecting the total independence and incompatibility of the religious and civil authorities. The former recognise the validity of the connection between civil and ecclesiastical matters,—are in favour of a national church,—and on the occasion referred to, wished the Burgher Synod to publish a *testimony* suitable to the agitated state of the times. To this proposal the Burgher Association declined to accede: and hence the minority withdrew from all connection with them, and formed themselves into a presbytery, separate and distinct from their former associates, called, at first, *The Consti-*

*tutional Associate Presbytery*, but afterwards *The Associate Synod of Original Seceders*. This body now extends to six presbyteries, embracing 36 congregations: they have a professor of divinity of their own; but in all other respects, with the distinctive exception above stated as to the exercise of civil jurisdiction *circa sacra*, they are identical with the synod from which they withdrew. — (*Mr. Crie's Statement of the Difference, &c.*, Edin. 1807.)

*Relief Synod.*—The origin of this body was as follows:—In 1755, on occasion of a vacancy in the parish church of Jedburgh, the town council and the majority of the inhabitants applied to the patron for a presentation in favour of Mr. Boston, established minister of Oxnam. This application was unsuccessful; in consequence of which the parties in question, and the people generally, invited Mr. Boston to be their minister; and bound themselves to pay him a stipend of 120*l.* per annum. This invitation he accepted; and having afterwards (1758) been deposed by the General Assembly, he, with Mr. Gillespie, who had also been deposed for disobedience to the orders of the General Assembly, united, and founded the *Relief Church*; professing to differ from the established church on no point other than the right of patrons to appoint ministers against the inclinations of the people. The Relief Synod rapidly increased; and now comprises 10 presbyteries, including 109 congregations; being, in point of numbers and influence, next to the United Secession Church. Indeed, these two bodies (the Secession and the Relief,) are at present (1846) making overtures in the view of forming a union of the two denominations. The Relief Synod have a professor of divinity in their own connection.

*Reformed Presbyterian Synod.*—This is the only remaining presbyterian body in Scotland, of which an account has to be given. They are the successors and representatives of a small but interesting portion of presbyterians who would not accept the settlement of presbytery as established by law in 1690. They regard themselves as representing the *Covenanters* of the times of Charles I. and II. They kept, and still keep aloof from the church establishment, inasmuch as they refused to accept of any establishment of presbytery unless the King subscribed the *solemn league and covenant*, and the various standards of the church. They are also known by the names of *Cameronians*, from Cameron, one of their most eminent ministers in the time of Charles II.,—and of *hills-people* from the circumstance that, till within the last sixty years, they continued to hold public worship in the open air, in honour of their forefathers, who, in times of persecution, had been driven to the hills for safety: they are in favour of an established national religion on the terms referred to. They are perhaps the most rigid presbyterians in Scotland. They have a professor of theology in their own communion. Their synod consists of six presbyteries, embracing 37 congregations.

*All the Scotch Presbyterians are Calvinists.*—All these bodies of presbyterians now noticed are Calvinists, recognise the same confession of faith, and the same standards; and differ only on points of discipline, chiefly that of patronage, their religious tenets being identical.

*Scotch Episcopal Church.*—Though episcopacy was, at various periods, the established religion of Scotland, the number of episcopa-

mans is but small: they extend to six dioceses, including 89 chapels of which eight are collegiate; most part of these congregations are very limited, and are supported not so much by numbers as by some wealthy families in their several localities. They have long had a theological institution at Edinburgh for the education of young men for the ministry. But this seminary is about to be superseded by the erection of Trinity College, a splendid structure at Cairnies, about ten miles west of Perth, which is to be opened in the course of next year. Ample accommodation is provided, not merely for the professors, but for the residence of 350 students within the building; and the course of instruction is to embrace, not only instruction in theology, but in all the branches of a liberal education; it being intended for lay as well as clerical students. The building is to cost 45,000*l*. Episcopacy, we may state, though still very limited in extent, has been gaining ground in Scotland, particularly among the wealthier classes, within the last few years, or since the agitation in the established church began. No fewer than 17 new congregations have been organized within the last eight years, or nearly a fifth part of the whole; in addition to four chapels not connected with any diocese. They adhere to the standards of the episcopal church of England, but have otherwise no connection with, and are independent of, that church. There are eight episcopal chapels in Scotland, not connected with the Scotch episcopal communion.

*Independent Churches.*—The Independents, or *Congregational Union of Scotland*, extend nominally to about 100 congregations; but of these some are very small, and 34 are without clergymen. The total number of organized congregations may be estimated at about 70. A meeting of the Union takes place once a year in Edinburgh; when a deputation of ministers from the Congregational Union of England usually attends. The Independents generally are Calvinists.

*Other Religious Sects.*—There are various other religious sects in Scotland, namely, Baptists, Methodists, both Wesleyan and Primitive, Quakers, Bereans, Glassites or Sandemanians, Unitarians, New Jerusalemites, Jews, &c. A sect has recently sprung up, named *Rowites*, from the Rev. Mr. Campbell, minister of the parish of Row, in Dumbartonshire, its founder, deposed for heresy by the General Assembly in 1832. Rowism in Scotland is somewhat akin to what is known as *Irvingism* in England. The Rowites impute extraordinary influence to the Holy Spirit; and have laid claim, in some instances, to miraculous powers and to the gift of tongues. But their tenets have never been properly defined or formed into a regular system, nor have they gained many proselytes.

*Roman Catholics.*—*Extent of the Roman Catholic Religion.*—The Roman Catholic religion still prevails in Scotland to no inconsiderable extent. There are many places in the western highlands, and some of the western islands, where this religion has prevailed from the most remote times; and there are many old families throughout all parts of the country that still, in the midst of protestantism, adhere to the faith of their forefathers. Recently the great influx and settlement

of Irish poor has prodigiously increased the number of Catholics. The last bishop of the ancient Catholic hierarchy (James Beaton) died in 1608; and it was not till 1694, in the reign of William and Mary, that the pope appointed another bishop, with the powers of Vicar Apostolic over the Scotch Catholic church. Since that time there has been a regular succession of prelates. Scotland is at present divided into three dioceses, with a bishop to each: the eastern district, the western district, and the northern district. The eastern district contains 15 chapels, with 18 clergymen: the western district 28 chapels, with 42 clergymen: the northern district 23 chapels, with 29 clergymen; making altogether 66 stated places of worship, and 89 clergymen. But this statement communicates very inaccurate ideas as to the aggregate number of the Catholics, inasmuch as the priest of each chapel has the superintendence of a large district of country, often 50 miles in extent, with subordinate places of worship. Almost every priest, indeed, may be said to itinerate.—(*Catholic Directory for Scotland*, 1845.) It is supposed that the whole Catholic population of Scotland is not less than 145,000, including the children of Catholic parents. The Catholics in Glasgow alone amount to about 30,000; in Edinburgh to 12,000. Of the income of the Catholic clergymen, it is impossible to give an account. They have no fixed incomes: whatever they may be, they are derived solely from the contributions of their flocks.

*Education.*—After the Reformation, the Catholics destined for the church were compelled, owing to the severity of the penal laws, to seek education in foreign parts. For this purpose, seminaries were founded at Paris, Douay, Valladolid, Rome, and Ratisbon; from which the Scotch Catholic church still derives some benefit. There are, for example, funds sufficient at this moment at Paris to maintain 18 youths during their course of education. But within the last hundred years Catholic seminaries have been established in Scotland: of these the chief, till recently, were those of Lismore and Aquhorties; but the only existing seminary is that of St. Mary's College, Blairs, Kincardineshire. The plan of education comprises, along with the more elementary branches, Latin, Greek, French, and Italian, and Spanish if required; poetry, rhetoric, mathematics, philosophy in all its branches, and divinity. The seminary has a president, two professors, and a procurator. Students are received from eleven to sixteen years of age. The students intended for the church are maintained and educated *gratis* after the first year. But in the case of young men studying for the church, the seminary at Blairs is, in the majority of instances, used only as initiatory; the student going abroad to complete his education. A convent (St. Margaret's) was established in 1835, within a mile of Edinburgh; the object of which is to promote the education of young ladies,—particularly those of the higher classes,—and the relief of the destitute and the sick. Of the ladies or nuns, the majority are foreigners; the rest Scotch. In connection with the convent, a separate residence, with a charity school and dispensary annexed, has been provided in the Canongate, a suburb of Edinburgh.—(*Catholic Directory ut supra*.)

*Summary of the Religious State of Scotland.*

| Catholic Chapels . . . . .                                                                           |                          | 66                  |
|                                                                                                      | <hr/>                    |                     |
| Total Number of Congregations (being about 1 to every 1000<br>persons) . . . . .                     |                          | 2673                |

But for reasons similar to those already stated in reference to England, the number of churchmen, as compared with dissenters, is much greater than it would appear to be from this account of the number of congregations belonging to each. Perhaps the whole number of dissenters in Scotland, exclusive of the members of the free church, may amount to from 550,000 to 600,000, and including the free kirk, to from 1,100,000 to 1,200,000.

SECT. 6.—*Church of Ireland.*

The ecclesiastical arrangements that prevail in Ireland are at once anomalous and irrational. The Reformation never made any considerable progress in the country, the new doctrines being only espoused by the English settlers within the *pale*. But after protestantism had been adopted by the bulk of the English people, and had been made the established religion on this side the water, it was determined to establish it as the state religion in Ireland. In pursuance of this resolution, the Catholic clergy were ejected from their livings, which were bestowed upon divines attached to the doctrines of the church of England. This change did not, however, produce any corresponding change in the religious feelings of the people, who seemed, indeed, to become the more attached to their ancient faith, according as their clergy were treated with harshness and injustice. In every other country, the established religion, if there be one, is that of the great majority of the people; but in Ireland the established religion is, and long has been that of a small minority. It is alien to, and repudiated by nine-tenths of the population, who regard it as erroneous in principle, and as a usurpation upon the rights and property of their clergymen.

These feelings are natural; and it is nugatory to suppose that they should be got rid of, so long as the existing arrangements are maintained. A Catholic establishment in England would not, in fact, be more absurd than a Protestant establishment in Ireland; and so long as the latter is permitted exclusively to enjoy the revenues appropriated by the state for the support of religion, so long will it be an object of disgust and hostility to the Catholic people and clergy, that is, to the great majority of the nation, and be productive of the most implacable animosities.

Previously to the late regulations, affecting the established church in Ireland, the country was divided into four archbishoprics, corresponding nearly with the four civil provinces, and these were farther subdivided into 29 bishoprics, held by 18 bishops.

The bishoprics, with their incomes, were classed as follows, viz. :—

| <i>Ulster.</i>                  |        | <i>Munster.</i>                      |         |
|---------------------------------|--------|--------------------------------------|---------|
|                                 | £.     |                                      | £.      |
| Armagh . . . . .                | 17,670 | Cashel and Emly . . . . .            | 7,354   |
| Meath and Clonmacnois . . . . . | 5,220  | Limerick, Ardfert, Aghadoe . . . . . | 5,369   |
| Clogher . . . . .               | 10,371 | Waterford and Lismore . . . . .      | 4,323   |
| Down and Connor . . . . .       | 5,896  | Cork and Ross . . . . .              | 4,346   |
| Derry . . . . .                 | 14,193 | Cloyne . . . . .                     | 5,009   |
| Raphoe . . . . .                | 5,787  | Killaloe and Kilfenora . . . . .     |         |
| Kilmore . . . . .               | 7,478  |                                      |         |
| Dromore . . . . .               | 4,813  |                                      |         |
| <i>Leinster.</i>                |        | <i>Connaught.</i>                    |         |
|                                 | £.     |                                      | £.      |
| Dublin and Glandelagh . . . . . | 9,321  | Tuam and Ardagh . . . . .            | 8,206   |
| Kildare . . . . .               | 6,452  | Elphin . . . . .                     | 7,034   |
| Ossory . . . . .                | 3,859  | Clonfert and Kilmacduagh . . . . .   | 3,261   |
| Ferns and Leighlin . . . . .    | 6,550  | Killala and Achonry . . . . .        | 4,082   |
|                                 |        | Total Income . . . . .               | 151,128 |

Under the newly modelled system introduced by the Church Temporalities Act, the 3 and 4 Will. IV., c. 37, the archbishoprics of Cashel and Tuam, have been reduced to bishoprics; and the kingdom has been divided into two archiepiscopal provinces, the north and the south, by a line drawn from the north of Dublin county, to the south of Galway Bay. It was then also enacted that the bishoprics should be reduced from 18 to 10, on the demise of the bishops, whose sees were to be suppressed, or united to others. These arrangements have since taken place in every instance except Kildare and Clogher. The dioceses and their incomes are now (1846) as follows, viz. :—

| <i>Northern Province.</i>              |        | <i>Southern Province.</i>                                |        |
|----------------------------------------|--------|----------------------------------------------------------|--------|
|                                        | £.     |                                                          | £.     |
| Armagh with Clogher . . . . .          | 14,494 | Dublin, Glandelagh, and Kildare . . . . .                | 7,786  |
| Meath and Clonmacnois . . . . .        | 4,068  | Leighlin, Ferns, and Ossory . . . . .                    | 4,200  |
| Derry and Raphoe . . . . .             | 8,000  | Cashel, Emly, Waterford, and Lismore . . . . .           | 5,000  |
| Down and Connor, and Dromore . . . . . | 4,204  | Cloyne, Cork, and Ross . . . . .                         | 3,590  |
| Kilmore, Ardagh, and Elphin . . . . .  | 6,253  | Killaloe, Kilfenora, Clonfert, and Kilmacduagh . . . . . | 3,870  |
| Tuam, Killala, and Achonry . . . . .   | 4,600  | Limerick, Ardfert, and Aghadoe . . . . .                 | 4,970  |
| Total . . . . .                        | 41,619 | Total . . . . .                                          | 29,319 |

The income of Clogher is estimated at 8,668*l.*; that of Kildare, including the deanery of Christchurch, Dublin, at 6,000*l.* On the demise of the present bishops, the revenues of these sees will fall into the hands of the Ecclesiastical Commissioners. The total income of the two archbishops, and of their ten suffragan bishops, will then be 70,938*l.*, being an average of 5,911*l.* to each. The revenues of the sees already suppressed, were, in the year ending 1st August, 1844,—

|                       | £.    | s. | d. |                       | £.     | s. | d. |
|-----------------------|-------|----|----|-----------------------|--------|----|----|
| Ardagh . . . . .      | 3,023 | 0  | 8  | Waterford and Lismore | 3,921  | 7  | 9  |
| Elphin . . . . .      | 6,702 | 9  | 6½ | Cork and Ross . . . . | 6,039  | 14 | 1  |
| Dromore . . . . .     | 5,075 | 9  | 8½ | Clonfert and Kilmac-  |        |    |    |
| Killala and Achonry . | 5,640 | 19 | 10 | dnagh . . . . .       | 2,407  | 16 | 0  |
| Raphoe . . . . .      | 6,337 | 4  | 0  |                       |        |    |    |
| Ossory . . . . .      | 3,565 | 0  | 0  | Total . . . . .       | 42,713 | 1  | 7  |

The revenues of the suppressed bishoprics, together with those of suspended dignities and benefices, and disappropriated tithes, have been vested by the Church Temporalities Act in a board of Ecclesiastical Commissioners, to be applied by them to the erection and repair of churches, the providing for church expenses which had previously been defrayed by vestry rates, and for other ecclesiastical purposes.

The total amount of the income of the various members of the Protestant episcopal church, during the three years ending with 1831, was returned to parliament as follows:—

|                                                                           | £.      |
|---------------------------------------------------------------------------|---------|
| Archbishops and Bishops . . . . .                                         | 151,128 |
| Deans and Chapters . . . . .                                              | 1,048   |
| Economy Estates of Cathedrals . . . . .                                   | 11,056  |
| Other subordinate Corporations . . . . .                                  | 10,526  |
| Dignities (not Episcopal) and Prebends without cure of<br>souls . . . . . | 34,482  |
| Glebe Lands . . . . .                                                     | 92,000  |
| Tithes . . . . .                                                          | 555,000 |
| Ministers' Money . . . . .                                                | 10,300  |
| Total . . . . .                                                           | 865,535 |

There seems, however, to be good grounds for thinking that the income of the archbishops and bishops given above was below the truth. It principally consists of the rent of lands let on lease, or rather on leases renewable by fine. The total extent of land belonging to the different sees has been returned to parliament at about 670,000 (669,274) acres. Now we have seen that the average rent of Ireland may be estimated at about 13*s.* 6*d.* an acre; and assuming the church estates to be only of a medium quality, which they are believed to exceed, they should on this hypothesis, be worth 452,250*l.* a year. But supposing that, owing to the defective system under which they are occupied, they only produce 6*s.* an acre; still, even at that extremely low rate, their gross rental would amount to 201,000*l.* At all events, it is sufficiently clear that the episcopal and glebe lands, if properly managed, would afford a revenue more than sufficient to provide for the religious instruction of the entire Protestant population of Ireland, without having recourse to any other funds.

We also incline to think that the amount of tithe given in the above statement was considerably underrated. The following statement laid by

Mr. Griffith, the engineer, before the Lords' Committee on tithe, throws a good deal of light on the subject. It can of course, however, be regarded only as an approximation. "Ireland is divided into four archbishoprics, 28 bishoprics, 2,450 parishes; and contains 20,400,000 statute acres. There are 1,422 beneficed clergymen; 1,539 parishes under the Composition Act, and 911 parishes not under the Composition Act. The

|                                                                                                                                                                                                                              | £.         | s. | d. |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|----|----|
| Gross amount of the composition for those parishes which have compounded for tithe is . . . . .                                                                                                                              | 442,419    | 0  | 0  |
| Average amount of the composition for those parishes which have compounded . . . . .                                                                                                                                         | 287        | 9  | 6  |
| Average proportion of the composition for tithe to 1 <i>l.</i> sterling in the value of the land . . . . .                                                                                                                   | 0          | 1  | 3½ |
| According to the best data I have been able to procure, and from my own knowledge of the value of land in Ireland, I am of opinion that the gross annual value of the land, rated at a moderate rent, may be about . . . . . | 12,715,578 | 0  | 0  |
| Rating the average amount of the tithe at 1 <i>s.</i> 3½ <i>d.</i> in the pound sterling, of the value of land, it would appear that the gross amount of tithe in Ireland would be . . . . .                                 | 821,214    | 16 | 7  |
| (If all the lands in Ireland were liable to tithe, which is not the case, consequently the total amount is less than that sum.)                                                                                              |            |    |    |
| If we take the average amount of the compositions for those parishes which have compounded, and multiply that sum by 2,450, the total number of parishes in Ireland, we shall have the sum of . . . . .                      | 704,313    | 15 | 0  |

"This is probably the nearest approximation to the true amount of the tithe in Ireland."

In addition to the unpopularity attaching to the church of England in Ireland, from its being the church of a minority, the fact of its deriving the largest portion of its income from tithes, tended materially to increase the odium under which it has long laboured. Tithe is everywhere a most vexatious and impolitic tax; but in Ireland it has been peculiarly noxious; for there the land being mostly split into small portions occupied by poor Catholic cottiers, the payment of tithe to Protestant clergymen, was not only felt to be a most oppressive burden, but was at the same time looked upon as a sacrifice imposed for the promotion and advantage of heresy and error. It was also very unfairly assessed. By a resolution of the Irish House of Commons in 1785, grass lands obtained an exemption from tithe; so that while a tenth part of the produce of a potato garden or slip of land, on which, perhaps, a numerous family was dependent, went to the establishment, the herds of the opulent grazier contributed nothing to its support. Under such circumstances, we need not wonder that, for a lengthened period, the payment of tithes in Ireland was made with extreme reluctance, and that their collection was, in innumerable instances, productive of outrage and bloodshed. At last it became next to impossible, in many parts of the kingdom, to derive any revenue from this source; and in consequence it was attempted to substitute compositions or fixed payments for tithes, in the room of tithes themselves. But, though productive of some advantage, this measure was comparatively useless, from its leaving the composition to be paid by the occupier and not by the landlord. To obviate this defect, an act

was passed in 1838 (1 and 2 Victoria, cap. 109,) abolishing compositions for tithes, and substituting in their stead a fixed payment of *three-fourths* of their amount, to be made by the landlords or others having a perpetual interest in the land. This Act, by relieving the tithe-collector from the necessity of coming into contact with the great bulk of the occupiers, has obviated a prolific source of prædial disturbance, and been, in so far, advantageous. Still, however, it must not be supposed that either this, or any other device, should ever reconcile the Irish people to the appropriation of a large revenue to the exclusive use of the church of a small minority of their number. The effect of this preposterous arrangement is to insult and alienate the bulk of the population, who, we hesitate not to say, would be more or less than men if it ceased to encounter their rooted hostility.

The ecclesiastical dignitaries subordinate to the bishops, are the deans, which are all presented by the crown, except those of St. Patrick's, Dublin, and Kildare. Certain deans have cure of souls, and others have not. The deans of St. Patrick's, Dublin; Christchurch, Dublin; St. Canice, Kilkenny; and Lismore, exercise peculiar jurisdictions, varying in each, within their respective deaneries. The dean is considered to be the head of the ecclesiastical corporations, called chapters, being a kind of council to aid the bishop in the government of his diocese. Three dioceses—Meath, Kilmore, and Ardagh—are without chapters; in lieu of which there is a synod, consisting of all the beneficed clergymen, in which the archdeacon presides. The chapters and synods are corporate bodies, and use a common seal. The chapters, though all have a general similarity of constitution, are each marked by some special peculiarity.

There is but one instance of a territorial exemption from episcopal jurisdiction,—the Lordship of Newry; the proprietor of which holds his spiritual court, and grants marriage licenses and probates of wills, under the seal of the religious house to which the lordship belonged before the Reformation.

The dioceses are divided into parishes, in the charge of rectors and vicars. These derive their incomes chiefly from tithe; of which there are two kinds,—great and small; the former derived from corn of every kind, hay and wool; the latter from flax, hemp, garden produce, and, in some cases, potatoes; but by another and more general explanation of these terms, two-thirds of the tithe of corn, hay, and wool, constitute the great tithe, and the remaining third the small tithe of a parish: the former is considered the property of the rector, the latter of the vicar. Latterly, a new order of parochial clergy has been introduced into the church, under the name of perpetual curates, who have charge of a portion of a parish specially allotted to them, the tithe of which they receive. They are not subject to the incumbent of the remaining portion of the parish, and hold their situations for life; thus differing from assistant curates, who are appointed occasionally at the will of the incumbent, from whom they receive a fixed annual salary. It appears from the report of the Irish Church Commissioners that the number of parishes, including perpetual curacies, is 2,405, of which 2,348 have provision for the cure of souls, and 57 have not, being either wholly inappropriate, or tithe free. But these are not held each by

a separate incumbent. On the contrary, so many of them are combined into unions, consisting of two or more parishes, that the number of incumbents amounts to only 1,385. Of these benefices, 478 are unions, and 907 single parishes. Unions are of two kinds—permanent and temporary. A permanent union may be constituted by act of parliament, by charter, by act of council, or by prescription. The temporary unions are made by the authority of the bishop, and cease on the demise of the incumbents for whose benefit they were created. The parochial clergy derive part of their income from glebe land attached to their respective benefices. The total quantity of glebe land amounts to 91,137 acres, from which if a twentieth part be deducted as unprofitable, there will remain 86,581 acres of profitable land; which if equally apportioned among the benefices would give, at an average, 62 acres to each incumbent. But it is very unequally distributed, by much the greater quantity of it lying in the northern province of Armagh. Most of the glebes are furnished with manse or glebe houses, built partly by a donation of money from the board of First Fruits; partly by loan from the same source, and partly at the cost of the incumbent, repayable by instalments from his successors. In cities and towns the parochial clergy are paid by ministers' money, being an assessment on every house of a certain value, estimated by the amount of rent paid.

When the Church Temporalities Act comes into full operation, the number and value of the benefices in Ireland, will be,—

|                                          |                                  |
|------------------------------------------|----------------------------------|
| 488 under the annual value of . . . £150 | 21 of . . . £750 and under £850  |
| 390 of . . . £150 and under 300          | 13 of . . . 850 and under 1,000  |
| 278 of . . . 300 and under 450           | 8 of . . . 1,000 and under 1,100 |
| 117 of . . . 450 and under 550           | 4 of . . . 1,100 and under 1,250 |
| 73 of . . . 550 and under 750            | 3 of . . . 1,250 and under 1,500 |

The incomes of the parochial clergy are subject to certain deductions. These are, first fruits, payments towards diocesan and parochial schools, repairs of certain parts of the churches, and repairs of glebe houses. The first fruits were designed to be the amount of the first year's income of every benefice, payable by the new incumbent in four annual instalments, and intended to be applied to ecclesiastical purposes, especially the building and repairing of churches and glebe houses, and the purchase of glebe land. But as the amount on each parish was rated according to assessments, made in the time of Henry VIII., Elizabeth, and James I., which have never since been altered, notwithstanding the extraordinary increase in the value of agricultural produce, the impost was little more than nominal, and has been suppressed by the late acts for regulating church property. The diocesan schools were to be maintained by annual contributions from the bishop and the beneficed clergy: the particulars are specified in the statement relative to those schools. The levy drawn from this source is also little more than nominal. The parochial schools are supposed to be maintained by an annual stipend from the incumbent, which is estimated by custom at two pounds per annum. In many cases this has not been paid. Every incumbent is bound to keep his glebe house in tenantable order; to enforce which regulation, the bishop appoints a certain number of temporary officers under the

name of rural deans, whose duty it is to visit the several parishes within their respective districts, and to report to him upon the state of the churches and of the glebe houses. The churches were heretofore kept in repair at the expense of the inhabitants of the parish. The new regulations have transferred this duty to the ecclesiastical commissioners, who are authorized to appropriate to this purpose a sufficient portion of the incomes of the extinguished sees, and other revenues in their hands.

SECT. 7.—*Irish Roman Catholics, Presbyterians, &c.*

1. *The Roman Catholic Church.*—The Roman Catholic hierarchy consists of four archbishops, corresponding in name and provincial rank to the archbishops of the Protestant Church, previously to the late changes, and twenty-three bishops. The bishops of Ardagh, Clogher, Derry, Down and Connor, Dromore, Kilmore, Meath and Raphoe, are suffragan to Armagh; those of Kildare and Leighlin, Ferns, and Ossory, to Dublin; Ardfert and Aghadoe, Cloyne and Ross, Cork, Killaloe, Limerick, Waterford and Lismore, to Cashel; and ~~Amhony~~ Clonfert, Killala, and Galway, to Tuam. The bishop of the united dioceses of Kilmacduagh and Kilfenora, is alternately suffragan to the archbishops of Tuam and Cashel. The wardenship of Galway, formerly an exempt jurisdiction, subject only to the triennial visitation of the archbishop of Tuam, has been erected into a bishopric under its former archiepiscopal jurisdiction. On the death of a bishop, the clergy of the diocese elect a vicar capitular, who exercises spiritual jurisdiction during the vacancy. They also nominate one of their own body, or sometimes a stranger, successor to the vacancy, in whose favour they postulate or petition the pope. The bishops of the province also present the names of two or three eligible persons to the pope. The new bishop is generally chosen from among this latter number. But the appointment virtually rests with the cardinals of the congregation *de propaganda fide*. Their nomination is submitted to the pope, by whom it is usually confirmed. In cases of old age or infirmity, the bishop nominates a coadjutor, to discharge the episcopal duties in his stead. His recommendation is almost invariably attended to. The object of his choice is appointed and consecrated, and takes his title from some oriental diocese, which he relinquishes on succeeding to the diocese in which he acts. As long as he retains the oriental title, he is styled a bishop *in partibus infidelium*, or more usually, a bishop *in partibus*. The emoluments of a bishop arise from his parish, —which is generally the best in the diocese,—from licenses, and from the cathedraic. Licenses are dispensations from the publication of banns in cases of marriage. They vary in amount from 5s. to 1l., and occasionally more, according to the circumstances of the contracting parties; and as the dislike to a previous public announcement of the marriage ceremony is very prevalent, the income from this source is considerable. The cathedraic is an annual sum varying from 2l. to 10l., according to the value of the parish, paid by the incumbent in aid of the maintenance of the episcopal dignity.

Every diocese has a dean, appointed by the cardinal in Rome, who

has the direction of ecclesiastical matters in Ireland, and is called the cardinal protector. It has also an archdeacon appointed by the bishop. Both these dignities are merely nominal, without either jurisdiction or emolument.

The incumbents of parishes are appointed by the bishop. If regularly collated, or in peaceable possession of the benefice for three years, they cannot be dispossessed, except for misconduct; otherwise they are removable at pleasure. A collation is a written nomination by the bishop. Coadjutors, or parish curates, are also appointed by the bishop, and removable by him at pleasure. The income of the parochial clergy arises from various sources, all voluntary. The Easter and Christmas dues consist of a certain sum paid by the head of every family in consideration of the spiritual instructions given to it. In country parishes it is generally 1s. at each festival, but is always expected to increase in proportion to the pecuniary circumstances of the parishioner. Marriage fees are another source of income. They are generally fixed at 10s. 6d., but increase in proportion to the opulence of the parties; and, in addition to this, a collection is often made by the friends of the young couple, for the benefit of the officiating clergyman. The fee for baptisms is 2s. 6d. A small sum is sometimes given for visiting the sick. Masses are paid for at rates from 2s. upwards. The opulent parishioners also send presents of corn, hay, and other agricultural produce to their clergyman, and generally take care that his turf shall be cut, his grain reaped, and his grass mowed, without expense to himself. Stations are half-yearly meetings at places appointed by the parish priest, where he hears confessions, administers communion, and catechises. A dinner is prepared for him in every house at which he holds a station. The customary stipend of a curate is the third part of the general receipts of the parish.

Monasteries and convents are numerous. Many of these institutions derive considerable funds from voluntary donations. The nunneries are supported partly by the sums paid by those who take the vows in them, for which from 300*l.* to 400*l.* is usually given, and partly from the annual fees or pensions paid for the education of the daughters of respectable Roman Catholics. The income derived from this latter source is very considerable.

2. *Presbyterian Church*.—The general government of the Presbyterian and other Protestant dissenting churches is modelled upon that of the church of Scotland. The spiritual affairs of every congregation are superintended by a minister, aided in matters of finance and discipline by lay elders. The ministers of a certain number of neighbouring congregations form a presbytery, of which lay elders also constitute a part. Each presbytery is governed by a moderator chosen from the ministers of its congregations, who hold stated meetings four times a year. Representatives chosen by these presbyteries form the ruling body of the church. It is called the synod; its president being a minister chosen annually under the name of moderator. The first presbytery in Ireland was formed at Carrickfergus in 1642, and gave rise to the synod of Ulster. The Presbyterian synod of Munster was formed about 1660. The presbytery of Antrim separated from the synod of Ulster in 1727, and the Remonstrant synod in 1829. A number

of seceders formed themselves into the Secession synod of Ireland about 1780. Previously to 1840 the number of presbyteries and congregations in each of these bodies was—

|                         | Presb. Congreg. |     |                          | Presb. Congreg. |    |
|-------------------------|-----------------|-----|--------------------------|-----------------|----|
| General Synod of Ulster | 24              | 275 | Presbyterian Synod of    |                 |    |
| Secession Synod . . .   | 10              | 132 | Munster . . . . .        | 2               | 15 |
| Remonstrant Synod . .   | 4               | 27  | Presbytery of Antrim . . | 1               | 13 |

In 1840 the General and Secession synods having united, assumed the name of the General Assembly of the Presbyterian Church in Ireland, comprising 433 congregations, which were arranged under 35 presbyteries.

Another body, unconnected with the union, is the Reformed Presbyterian synod of Ireland, consisting, in 1841, of 4 presbyteries and 25 congregations. The total number of Presbyterians in 1834 was 642,356. The ministers are supported by voluntary contributions, the rents of seats or pews, and the *Regium Donum*, or Royal Gift, first granted in 1672 by Charles II., who gave 600*l.* of “secret service money” to be distributed in equal portions among them annually. The grant was discontinued towards the close of his reign and during that of James II., but was renewed by William III., who augmented it to 1,200*l.* a year. In 1784 the amount was increased to 2,200*l.*; in 1792 to 5,000*l.*; and in 1803 a classification was made according to the number of families in each congregation, and the amount of the minister’s voluntary stipend, by which those of the 1st class received 100*l.* annually; of the 2nd, 75*l.*; and of the 3rd, 50*l.* By gradual augmentations the *Regium Donum* has increased to upwards of 25,000*l.* a year. In 1831 the system of classification was abolished, and each minister now receives 75*l.* per annum, Irish currency.

The Remonstrant Presbyterian synod was formed in May, 1830, in consequence of the separation of 17 ministers, with their congregations, from the General Synod of Ulster, on the ground that, contrary to its usages and code of discipline, it required from its members in 1827 and 1828, submission to certain doctrinal tests and overtures of human invention. Since the formation of the Remonstrant synod, 12 congregations have been added to its numbers. There are some other descriptions of Presbyterians in Ireland, which it seems unnecessary to specify. Those wishing further information on this subject may consult *Thom’s Dublin Almanac*, the best work of its class with which we are acquainted. We have been indebted to it for most part of the foregoing statements on this subject.

3. *Numbers belonging to the different Sects in Ireland.*—Considering the nature of the penal laws by which the Catholics of Ireland were long oppressed, and that, notwithstanding their relaxation, the Catholics continued, down to a recent period, to be regarded by those in authority as a degraded *caste* unworthy to fill any office of power or emolument, it might have been expected that their numbers would have been materially diminished, compared at least with the adherents of other and more favoured sects. But such has not been the case. On the contrary, the unmerited persecution to which the Catholics have been exposed seems to have attached them the more to the faith of their ancestors: and, instead of declining, they have rapidly gained ground,

both in absolute numbers and in relation to others. It may be truly said of Catholicism in Ireland,—

Per damna per cædes, ab ipso  
Ducit opes, animumque ferro.

According to Sir William Petty, the population of Ireland, in 1676, amounted to 1,100,000, of whom 800,000 were Catholics, and 300,000 Protestants.\* The revolutionary struggle that soon after took place, and the migration of Catholics by which it was followed, and which was further promoted by the enactment of the penal laws, seem to have had a considerable effect on the proportion of Catholics. According to an official return made to Parliament in 1731, the population of Ireland was as follows:—

|                     | Protestants. | Catholics. | Both.      |
|---------------------|--------------|------------|------------|
| Ulster . . . . .    | 360,630      | 158,098    | 1,309,768  |
| Leinster . . . . .  | 303,087      | 447,916    |            |
| Munster . . . . .   | 115,130      | 482,044    |            |
| Connaught . . . . . | 21,604       | 221,780    |            |
|                     | 700,451      |            | 2,011,219* |

But since this epoch, a very decided change has progressively taken place in the proportions of Catholics and Protestants. The increase of population in Ireland since 1780 has, as we have already seen (vol. i. p. 437, &c.), been more rapid than in either England or Scotland; and this increase having principally taken place in the country, the population of which was, in most parts, essentially Catholic, the adherents of the latter faith were, in 1834, to all descriptions of Protestants in the proportion of 4·2 to 1, and to the members of the Established Church as 7½ to 1.

These results (which cannot have been sensibly changed in the interval) have been deduced from the following table, drawn up by the Commissioners appointed to inquire into the State of Religious and other Instruction in Ireland:—

*Table exhibiting the Number of Members of the Established Church, and of Roman Catholics, Presbyterians, and other Protestant Dissenters respectively in each Province of Ireland, and in the whole Kingdom, in 1834.*

| Ireland.                    | Members Established Church. | Roman Catholics. | Presbyterians. | Other Protestant Dissenters. | Total of all Sects. |
|-----------------------------|-----------------------------|------------------|----------------|------------------------------|---------------------|
| Province of Armagh . . .    | 517,722                     | 1,955,123        | 638,073        | 15,623                       | 3,126,741           |
| „ Dublin . . .              | 177,930                     | 1,063,681        | 2,517          | 3,162                        | 1,247,290           |
| „ Cashel . . .              | 111,813                     | 2,220,340        | 966            | 2,454                        | 2,335,573           |
| „ Tuam . . .                | 44,599                      | 1,168,568        | 800            | 369                          | 1,234,326           |
| Total Population of Ireland | 852,064                     | 6,427,712        | 642,356        | 21,806                       | 7,943,940           |

The statements now laid before the reader disclose the principal sources of those religious disputes by which Ireland has been so long agitated and disgraced. She is the only European country in which the religion of a small minority of the population has been exclusively

\* Political Anatomy of Ireland, p. 114, ed. 1719.

\* Newenham on the Circumstances of Ireland, Appendix, p. 18.

endowed and made the state religion. This preposterous arrangement subverts every argument alleged in defence of an establishment. Its ablest defenders, Drs. Warburton and Paley, distinctly admit that it is not instituted to promote the interests of what government may suppose to be the *true faith*; and that its only legitimate object is to furnish instruction and consolation, according to their own religious faith, to the bulk of the population, and especially to the lower classes, many of whom are so poor as to be unable to furnish it for themselves. But in Ireland we act in the teeth of this principle, and indeed, of the obvious dictates of common sense. There the adherents of the Established Church do not exceed *one ninth part* of the population; and this small minority consists almost entirely of the wealthier classes, who could, without difficulty, supply themselves with religious instruction. While, however, we have amply and, indeed, lavishly provided for the spiritual interests of the *rich* and the *few*, we have altogether neglected those of the *poor* and the *many*! We leave the clergy of the Catholics, that is, of more than five-sixths of the people, without any countenance from government, to depend for support on the voluntary contributions of their flocks, consisting, for the most part, of the poorest and most beggarly peasantry in Europe. And we have also seen that the Catholic population have not merely been left to provide themselves with religious instructors, but that they were farther compelled, down to a very recent period, to pay tithes; that is, to make over a tenth part of the produce of their farms and potato gardens to the established clergy, who, at the same time, were, and continue to be, in possession of all the extensive estates and glebe lands that formerly belonged to the Catholic clergy! Can we wonder, under such circumstances, at the rooted dislike and hostility evinced by the Catholic population to the Established Church? They do not look upon it as heretical only, but as the badge of the conquest of their country by England, and as being bottomed upon and upheld by injustice and oppression. The improvement in the assessment of tithe, and the reform of the Church, may lessen the dislike to it; but the radical objection to it is one of principle. So long as it exists, it must produce a sense of degradation and of unfair treatment on the one side, and of superiority and preference on the other. A majority may submit without much reluctance to see the same privileges conferred on a minority that they enjoy; but it is a contradiction and an absurdity to imagine that a decisive majority should ever willingly submit to be deprived of privileges enjoyed by a minority. A distinction of this sort is at variance with every principle on which society is founded: and, so long as it is kept up, it must necessarily be productive of violent animosities.

“It is ever to be remembered, in discussing the ecclesiastical state of Ireland, that the objections of the Roman Catholics to the Established Church of that country are not of *more* or *less*; that they would not be removed by the abolition of a few bishoprics, or the paring down of a few benefices; but that they lie against its very existence,—against the principle of making a public provision in Ireland for the clergy of the small minority, so long as the clergy of the large majority is left wholly destitute of aid from public funds. No im-

provements in the internal economy of the Established Church, in the distribution of its revenues, or the discipline of its clergy, tend to lessen the sense of grievance arising from this source; the objection is of *principle*, not of *degree*; and nothing short of perfect equality in the treatment of all religious sects will satisfy the persons whose discontent springs from this source. The effect of the preference in question is, that the whole body of Roman Catholics in Ireland are more or less alienated from the government, the author of their wrong, and are filled with jealousy and ill-will towards the more favoured Protestants. This feeling is the stronger, as the Roman Catholics are the most numerous sect in Ireland, and have, therefore, the better claim on the consideration of government. In England, where their number is insignificant as compared with that of the entire population, they defer to those superior claims for public support which the clergy of the Established Church are so fond of resting on—the numerical preponderance of their persuasion; but in Ireland, six and a half millions out of eight millions naturally feel that they have at least as good a right as any other sect to any endowment for ecclesiastical purposes which may be at the command of the State.” \*

For these and other reasons that will readily occur to the reader, we are clearly of opinion that the preferences that have hitherto existed in Ireland in religious matters should be put an end to. If there is to be only one endowed or favoured religion in Ireland, common sense would say that the Roman Catholic should have the preference. Why should it not enjoy the same favour in Ireland that the Presbyterian enjoys, because it is the religion of the majority, in Scotland? It is true, indeed, that the Catholic leaders, and even the clergy, pretend to disapprove of the proposal for the endowment of their church, and affirm they would be satisfied with the general establishment of the voluntary principle. We, however, attach little or no value to this opposition. Those who of late years have had the ascendancy among the Catholics, have rarely supported any measure fitted to promote the real interests of the country. They know that an endowed clergy would, most likely, be opposed to their projects; and the clergy are themselves compelled from their peculiar position to appear to approve of what, under other circumstances, they could hardly fail to condemn. But, admitting that the establishment of the voluntary system would be a vast improvement upon the present preposterous arrangements, the question is, would it be good policy to leave the Catholic clergy to depend in time to come, as they have done since the Reformation, on the stinted contributions of their flocks? The public interests require that they should be attached to the government; and does any one doubt that this will be best effected by providing, at the public expense, for their liberal support? At present they are in a state of degrading dependence on those who attend their ministrations. They dare not, how much soever they may disapprove of many of their opinions, publicly oppose them, except at the risk of being mulcted of a portion of their incomes.

Wherever they are kindly treated the Catholic clergy are the firmest

\* See the valuable work of G. C. Lewis, Esq, on *Disturbances in Ireland*, p. 513, &c.

friends of government, and of the laws ; and no doubt they would be so in Ireland were they patronised and paid by the public. The countenance many of them have given to the Repeal agitation, and their opposition to the National System of Education, are the necessary results of their false position. Had they possessed a " stake in the hedge," and been directly interested in the stability of the present order of things, their conduct would, no doubt, have been widely different ; and the demagogues who wish to dismember the empire, as well as those whose baser object is to enrich themselves by agitation, would have encountered the opposition, instead of having the support, of the majority of the Catholic clergy. Hence in our view of the matter the best interests of the State require that ample provision should be made for the latter. And having already conceded the principle in providing for the better education of the aspirants to the priesthood, we are bound, in consistency, to carry it out by making a provision for the priests. Unless this be done, the clergy will continue to be exposed to the full force of all the sinister influences which have had so powerful an effect upon their conduct ; which have made them the slaves rather than the guides of their hearers ; the abettors and not the opponents of agitation. Notwithstanding the many prejudices it will have to overcome, our conviction is, that in the end the establishment of the Catholic clergy will be found to be indispensable to the tranquillity and security of Ireland. At all events no means should be left untried by which their affection and good-will may be conciliated. And, certainly this desirable end will be more likely to be effected by their endowment than by the universal establishment of the voluntary principle. The latter would be a measure of doubtful policy ; and though we incline to think that it would be decidedly preferable to the existing system, we have no idea that it would be half so beneficial as an endowment. There is a wide difference between being attached to the State by substantial benefits, and being left, in common with others, to shift for oneself without countenance or protection of any kind.

### MISCELLANEOUS PARTICULARS.

#### CHAPTER 1.—ESTABLISHMENTS FOR PUBLIC EDUCATION.

##### SECT. 1.—*Education in England and Wales.*

No public or general provision has ever been made in England for the education of the great bulk of the people. Until a late period all that had been accomplished in this way had been the work of benevolent individuals and associations ; and it is astonishing how much has been effected within the present century by their exertions. Still, however, there is much room for improvement. The different associations act frequently on contradictory principles ; and being necessarily confined to

towns and populous districts, no inconsiderable portion of the children of the agricultural classes are yet either entirely without the means of school instruction, or are but indifferently supplied with it. And, how extensively soever charity schools may be supplied, they are accompanied with some considerable drawbacks. Something of degradation always attaches to the idea of being educated at a school supported either wholly or in part by voluntary subscriptions. Those who send their children to such schools, and even the children themselves, cannot but feel that they are admitted to them only because they are, in some degree, paupers, indebted to the bounty of others for what they cannot obtain for themselves; and this feeling has a tendency to weaken that sense of independence, and of self-respect, for the want of which the best education cannot fully compensate. In other respects, too, the charity system is open to various objections. Mr. Malthus did not scruple to say, that it was a national disgrace to England that the education of the bulk of the people should be left to Sunday and other schools, supported by the subscriptions of individuals, who may give to the course of instruction in them whatever bias they please.\* We are disposed to concur, with but little qualification, in this opinion. The attention of the legislature cannot, as it appears to us, be too early or earnestly directed to this subject. The experience of Scotland, Prussia, the United States, and various other countries, is decisive in regard to the vast advantages to be derived from the establishment of a well contrived system of national education—a system that should bring education to the door, as it were, of the poor man, and supply individuals of all classes with the means of obtaining *really good and useful* instruction at a reasonable cost.

At the same time, however, it must be admitted that it is exceedingly difficult to suggest any plan for a national system of education against which many weighty objections may not be fairly urged. Suppose it were enacted that a school for the elementary branches of education should be founded and endowed by government in every parish, or other convenient district, the knotty questions would immediately occur, whether shall any, and, if any, what system of religious instruction, be introduced into these schools? To whom shall the drawing up or choice of class books be intrusted? Shall the same class books, and the same plan of instruction, be adopted in all the schools, or, if not, how and to what extent shall they be varied? Shall it be compulsory on parents, as in Prussia, to send their children to school, or shall it be optional? In whom shall the appointment of schoolmasters be vested, and what shall be the test of their qualifications? These and other questions of the same kind, involving considerations of the highest importance, must all be investigated and disposed of, in one way or other, before any system of national education can be established. But so many and such formidable objections, originating partly in the difficulties inherent in the subject, and partly and principally in the discordant views and prejudices of the different religious sects and political parties amongst us, might be, and no doubt would be, made to every proposal for a national system of education, that, however beneficial, there are but slender grounds on which to hope for its establishment.

\* Essay on Population, 5th ed. vol. iii. p. 204.

Various charity schools for the elementary instruction of the poor were founded at different periods between 1690 and 1780; but it was not till about the latter epoch that the desultory efforts of benevolent individuals began to be systematised, and that exertions were made on a large scale, to procure for the poor the inestimable advantage of elementary instruction.

At present the primary instruction of the great mass of the population is principally supplied through,—1. Sunday-schools; 2. National Schools; and 3. British and Foreign Schools.

1. *Sunday Schools*.—These excellent institutions, which have contributed essentially to the improvement of the lower classes, were projected by, and owe their origin to, the sagacity and active benevolence of Mr. Robert Raikes, a printer of Gloucester. Mr. Raikes established Sunday schools in Gloucester in 1781 and 1782. The plan was soon after patronised by Dr. Barrington, then Bishop of Salisbury, and by many other reverend and learned individuals. Though still capable of much extension, it has been eminently successful; and has been carried to an extent which, at the outset, no one could have anticipated. The pupils are instructed in the principles and duties of religion, and are taught to read and write; they consist of adults as well as children. The meetings are generally in the afternoon of Sunday; so that, while they supply valuable instruction to the poor, they do not encroach on their employments, but make that time be devoted to the acquisition of knowledge that would otherwise be, most probably, wasted in idleness or dissipation.

2. *National Schools*.—Under this term is comprised a great number of schools, both new and old, conducted under what is termed the National System. This system originated in the efforts of various district societies, in different parts of the kingdom, to apply the principles of Dr. Bell, of Madras, to the government of the existing parochial free schools. In 1811 the different district societies were incorporated as members of a central association, for the education of youth in the doctrines of the national church. This society having acquired large funds, has been able, in the course of the present century, to found a large number of additional schools, in which education is given at a slight expense to the parents; with model schools (such as on the continent are termed Normal schools) for the instruction of masters and mistresses. The schools, therefore, under the management of the National Society are of two classes: the old parochial and free schools, and those of modern foundation, consisting of daily and Sunday schools. The characteristic of the system is, the use of the church catechism, and attendance on church worship by the children. The progress of the National Schools, since 1813, two years after the formation of the society, has, if we may depend upon their accounts, been as follows:—1813, 230 schools, with 40,484 children; 1820, 1,614 schools, with about 200,000 scholars; 1830, 2,609 *places*, containing 3,670 schools, with about 346,000 scholars; and since then their progress has been quite as rapid. But though there can be no doubt that these statements are much exaggerated, it must be admitted that the National Schools have contributed most materially to diffuse the advantages of

education. The society has expended very large sums in erecting and improving school-houses.

3. *The British and Foreign School Society* was founded in 1810. It arose out of the exertions of Mr. Joseph Lancaster. It is designed to promote the education of the working classes of every sect and denomination; and to facilitate this grand object, all religious tests are excluded, and no catechism or creed is allowed to be used in any of the schools. This society maintains a considerable number of schools in all parts of the country; and has established, in the Borough, a model school, on a large scale, and an establishment for the instruction of masters. Different opinions are, of course, entertained as to the distinguishing principle on which these schools are founded; but the education they afford is favourably spoken of by good judges. Mr. Pillans of Edinburgh, an excellent authority as to such subjects, says that the instruction given in the Lancastrian schools is very superior; that "there is much more play given to the faculties, more spirit in the instruction, and a vastly greater fund of knowledge acquired," than in most other schools.—(*Report on Education*, 1834, p. 42.)

In 1833 certain returns were published by the House of Commons of the various Sunday and other schools open for the education of the public in England and Wales. We inserted these returns in the last edition of this work, with an intimation that we considered them as "greatly exaggerated," and but little to be depended on. And it has since been shown, over and over again, that they were entitled to little or no credit. Mr. Haly, the secretary to the Southwark fund for schools, who has given much attention to the subject, supposes that in England and Wales, in 1833, provision had been made (exclusive of Sunday and endowed schools, *see post*) for the education of about 400,000 pupils;\* taking it, however, at 500,000, and supposing provision to have been made in the interval for an additional 500,000, the existing accommodation will be equal (exclusive of the endowed schools) to the wants of 1,000,000 scholars. But the population of England and Wales may at present (1846) be roughly estimated at 17,000,000, of whom about 2,500,000 may be of an age suitable to attend at school; and such being the case, it will follow, allowing for the attendance at endowed schools, that before the population be fully educated, provision will require to be made, in addition to that already in existence, for the instruction of, at least, 1,000,000 young persons! and, supposing each school to have at an average about 150 pupils, 6,600 new schools will be necessary to supply the deficit!

Though government has not been able to organise any system of national education, it has, within these few years, adopted a plan by which it has done a good deal to promote instruction without exciting the opposition that would have been called forth by its direct interference with existing systems. Parliament votes annually a sum for the promotion of education, the disposal of which is vested in the Committee of Council for Education. Hitherto the grants have been principally disposed of in advances towards the erecting of school-houses, but latterly, also, contributions have been made to the erection of

\* *Education, &c.* by W. T. Haly, Esq., p. 15.

houses for the masters. The grants to schools are at the rate of 1*l.* per head for every child in attendance, whether the school be for infants or more advanced pupils. Applications for these grants must be made by the promoters of the school through the National Society, or the British and Foreign School Society. The principal condition annexed to a grant is that the school so assisted shall be open to the visits and examinations of a government inspector. This condition, though of essential importance, was for a lengthened period the subject of much discussion; and it was not without great difficulty that, in 1839, the matter was adjusted. According to the present arrangement, the inspectors of the National Schools are clergymen nominated by the Committee of Education and approved by the Archbishop of Canterbury. All National Schools which have received grants are open to their inspection; and those which have not been assisted may be visited by the inspectors upon application to the trustees, with the sanction of the bishop of the diocese. In the case of the British and Foreign Schools the inspectors are laymen.—(*Haly*, p. 11.)

The inspection, as will easily be seen from these statements, is, in the case at least of the National Schools, in many respects defective. But such as it is, it has been productive of the best effects, by exhibiting the wretched state of not a few schools, which the public had been led to suppose were all but models of perfection. The establishment of a really efficient system of inspection, that should be applicable to all descriptions of schools, whether public or private, would, of itself, be an immense improvement. It would do more than anything else to expose and root out the ignorance and quackery so very prevalent amongst the masters and keepers of schools and other seminaries.

The grants to the Committee of Council have been as under, viz. :—

|                         | £.                |
|-------------------------|-------------------|
| From 1839 to 1842 . . . | 30,000 per annum. |
| From 1843 to 1844 . . . | 40,000 „          |
| In 1845 . . . . .       | 75,000 „          |
| In 1846 . . . . .       | 100,000 „         |

But to be fully effectual, the grant would require to be increased to 200,000*l.* or 300,000*l.* a year. At present the deficient supply of properly qualified teachers is the greatest drawback on the existing schools, and the greatest obstacle to the spread of new ones; and it would be of material service were government to endeavour to supply this deficiency by establishing schools in different parts of the country for the training of schoolmasters and schoolmistresses. Some addition should also, if practicable, be made to the emoluments of the teachers. Unless this be done, it will be idle to expect that properly qualified parties will devote themselves to the business of teaching.

*Free, Endowed, and Grammar Schools*—The names, free school, endowed school, grammar school, &c., are often used with some degree of confusion; but their proper meaning appears to be as follows :—A free school is, strictly, any school in which elementary instruction is afforded gratuitously (or nearly so) to the children of a particular locality, without reference to the source whence the funds are derived, whether from private subscriptions, as in many of our parochial schools, &c., or as in some corporate towns, from the

general property of the corporation. Endowed schools are those of which the expenses are wholly or partly defrayed out of endowments, given or bequeathed by the munificence of a founder. Grammar schools are endowed schools, to the constitution of which the founder has annexed the condition, that classical instruction should form either the whole or a part of their discipline.

The English free and endowed schools constitute a very peculiar feature in the educational establishments of this country. They afford, perhaps, the only example at present subsisting in Europe, of an extensive, numerous, and wealthy class of national foundations for the purpose of elementary instruction, in which the hand of government has never interfered to modify, reform, or direct, or in any way to alter the original disposition of their creators, except in a few insulated instances in which parliament or judicial tribunals have taken cognisance of cases brought before them.

Although some of these schools are of considerable antiquity, by far the greater part were founded during the century and a half following the Reformation. Some are of royal, but the great majority are of private endowment. Some, again, are open to scholars from all parts of England, or to any one nominated by the governors, &c., of the school; but the greater part are local, and their benefits confined to the natives of the place in which they are situated. The endowments are, of course, extremely various in amount; but the intention of the founder, even in the humblest of these institutions, appears, generally speaking, to have been, that the education afforded to the boys on the foundation should be gratuitous, and the schoolmaster paid by a salary arising out of the endowment.

Those among the free and endowed schools which were constituted without any express stipulation on the part of the founder, that instruction in the dead languages should form a part of their discipline, have remained, for the most part, as charity or gratuitous schools of elementary education. They have in general fallen, by degrees, into what is termed the National System. But the fate of those numerous schools in which the boys were, by the original statutes, to be instructed in Latin, that is, of the grammar schools, has been very different. It is probable that the general disposition among charitable individuals, during the age which followed the Reformation, to devote their liberality to the endowment of schools, was owing to the deficiency of education occasioned by the suppression of the monasteries and chantries, which had been of considerable service in the instruction of the lower classes. But, before the Reformation, the number of clergy, both regular and secular, was very large. Latin was a language in ordinary use for the purposes of the church; and those who recruited its ranks were taken, not from the superior classes only, but from the mass of the population. Hence the extraordinary number of students who thronged the universities in the fourteenth and fifteenth centuries: and hence, also, elementary instruction in Latin was not thought misapplied when bestowed on the humblest youth of the kingdom. At the Reformation the use of Latin in the churches was indeed abolished; but that event happened in a scholastic age, when ancient learning was still regarded as the fundamental groundwork of all know-

ledge. Hence the benevolent founders of our endowed schools did not scruple to require that instruction in the dead languages, or at least in Latin, should be communicated in their institutions, even when open to and intended for the poorest of their townsmen and fellow-parishioners. The equalising spirit of the Roman Catholic church, under which the lowest as well as the highest were reckoned alike fit for ecclesiastical employments, had not yet been effaced from the national mind.

In process of time, however, the taste for scholastic instruction in the dead languages gradually diminished; and the fortunes of the endowed grammar schools underwent considerable vicissitudes. Those which were situated in populous and wealthy towns continued in general to maintain their importance: many, also, were preserved in consequence of their connection with the universities, and the benefits which they held out to youths proceeding thither (out of nearly 500 free and endowed schools, described by Mr. Carlisle, in his work on these institutions, about 150 have advantages annexed to them in the way of fellowships, scholarships, or exhibitions). But a great number of those situated in poorer places, being hampered by the peculiarity of their original statutes, which makes them proffer a species of instruction for which there are no longer any candidates, have sunk into decay. The endowments, however, still remain; and the presentation to the masterships being frequently vested by the founders' statutes in corporations, colleges, or close bodies of governors, they have, in many instances, degenerated into sinecure offices.

Of those grammar schools which have survived as extensive and frequented seminaries, several have acquired, in ordinary language, the character of public schools. This, however, is a term of very arbitrary application. Sometimes all the larger grammar schools, established in considerable towns, connected with the universities by endowments, and affording preparatory instruction for them, are classed together, in ordinary language, as public schools. More commonly, however, this title is restricted to a few schools which have acquired it by prescriptive usage. These are, principally, those large establishments frequented by the youth of the higher classes; together with a few of a less aristocratical character, but which have a peculiar claim to consideration from the great number of boys instructed in them, and the munificent scale of their foundation. They may be ranked in three classes. 1. The three great collegiate schools, two of which are of royal foundation, and one of private endowment, which custom has placed on an equal footing with them: Eton, Westminster, Winchester. 2. The great metropolitan schools: Charterhouse, St. Paul's, Merchant Taylors', Christ's Hospital, &c. 3. A select number of grammar schools, varying according to circumstances, in which the foundation is unimportant, but which have acquired, either by a species of prescription or from the talents and popularity of individual masters, a character as preparatory schools for the universities, and are much resorted to by the wealthier classes.

*Eton College*, although not the oldest foundation of its class, deserves on many accounts the first mention in an account of English scholastic

institutions. Not only has it been for a lengthened period the most frequented and celebrated of our public schools, but the mode of instruction pursued at Eton, the grammars and other books used there, and its internal regulations, have been followed and borrowed by a large proportion both of the public and private classical schools of the country. It is in fact the model-school for most institutions of a similar kind; and, until the present time, it has undergone less variation in the quality and character of the instruction which it professes to give than almost any other. By entering somewhat minutely into the details of its constitution, we are enabled to form a pretty correct idea of the English system of classical education, as pursued, with only a very gradual change, ever since the Reformation.

Eton College was founded by Henry VI., in 1440, under the name of the College of the Blessed Virgin Mary beside Windsor. The parish church of Eton, then a small village adjoining Windsor, was pulled down, and a new church erected, to be both parochial and collegiate. The chapel was founded in 1441, in which year also the second charter of foundation was granted; the third and final in 1442: the statutes were completed in 1446. The body thus constituted consisted of a provost; ten fellows (although that number was not in fact completed); a master of the school; ten chaplains; an usher; ten clerks; seventy scholars; sixteen choristers, and ten almsmen or breadmen. The numbers of some of these were however reduced in process of time: there are now seven fellows, two chaplains, two lay-clerks, ten choristers, and two masters, on the foundation: the assistant masters of the school not being necessarily connected with it.

This royal foundation, in its early progress, met with much opposition, and suffered some spoliation from succeeding kings, especially Edward IV. But from the reign of Henry VIII. downwards its history has been one of continued prosperity. The present collegiate edifice was erected at various periods: it contains, in two quadrangles, the chapel, the two schools, upper and lower, the masters' chambers, the provost's lodge, the private residences of the fellows, and the library.

The provost of Eton is elected by the fellows. For many years, however, it has been the custom to elect the nominee of the Crown, provided the appointment is statutable, and there be no personal objection to the individual. The right of the fellows to elect their own provost has not been disputed. The fellows fill up any vacancy among themselves by election. They may marry; and their residence, with an income averaging 650*l.* a year, is found by the college: they are, however, entirely unconnected with its duties as a place of education. The master and lower master are elected by the provost and fellows. The assistant masters, of whom there are 13 in the upper school, are appointed by the head master, subject to the veto of the provost. The three assistants in the lower school are appointed by the lower master, subject to the veto of the provost and head master. They have been for many years elected from the fellows of King's College, Cambridge.

But this restriction was not usual in former times; and it has been occasionally dispensed with in later years: it is not imposed either by the letter or the spirit of the statutes.

The seventy scholars, or, as they are termed, in consequence of the

wish of George III., "king's scholars," are eligible from eight years of age to fifteen. The statutable qualification is, that they should be "poor and indigent," words which of course receive a very liberal interpretation, though, in point of fact, the boys admitted on the foundation have, for the most part, less wealthy parents than the independent members of the school. The appointment is eagerly sought, on account of the pecuniary advantages attending it. Preference is, by the statutes, given to boys of those parishes in England and Wales where Eton has estates, and next, to those born in the counties of Buckingham and Cambridge. The foundation was made entirely with a view to the instruction of youth for holy orders; and we find it consequently provided, that no one so maimed in his limbs as to be under the canonical impediment as to entering orders, can be admitted on the foundation. Scholars of the foundation are lodged within the college. The first 49 have separate rooms, which serve both for sleeping and for study. The 21 juniors sleep in a public dormitory, but have studies for preparing their lessons and exercises. Three rooms assigned to boys in the sixth form are situated near the studies and dormitory to preserve order. The scholars are provided with beds, breakfasts, dinners, and suppers, by the college. Their education is gratuitous. The expense incurred for a boy on the foundation cannot exceed 30*l.* a year, unless his parents choose to supply him with unnecessary funds. The election is by merit only. At the election of 1846, there were 53 candidates for 6 vacancies; 20 names were placed on the indentures. The total expenses of a boy educated at Eton as an *oppidan* may perhaps average from 100*l.* to 150*l.* per annum in the upper part of the school.

The election of scholars takes place every year on the last Monday of July or the first of August. The electors are the provosts of Eton and King's College, the vice-provost of Eton, the master of Eton, and two masters of arts (called posers) of King's College. These functionaries divide the appointments among themselves. The usual number admitted on what is termed the indenture, at each election, is twenty-four: they are then admitted on vacancies occurring; at the same time, twelve or more of the head boys among the scholars are placed on the roll for King's College, to fill up such vacancies as may occur in it. Failing King's, collegians are superannuated at nineteen (or eighteen, if they attain that age without being placed on the roll for King's College). Of this last foundation some account will be given under the head of the university of Cambridge.

The king's scholars at Eton are subjected, with regard to their discipline and management, to the peculiar and strict regulations of the foundation; but in respect of the education which they obtain, they are in all respects exactly upon the same footing with the oppidans or independent scholars, who are not upon the foundation. The two classes of boys are confronted together in the ranks (or forms as they are termed) of the school, and enter into competition together at the examinations. There used to be a certain feeling of pride on the part of the oppidans, which prevented much association between them and the collegers, except in the upper part of the school. But the late munificent subscriptions of old Etonians, assisted by Her Majesty, Prince Albert,

and the Queen Dowager, has made so great an alteration in the comforts and general position of the collegers, that this exclusive feeling is gradually subsiding; and the election by merit is likely, in a few years, to have the effect of making the collegers hold the same rank in the school as the scholars of Trinity and the students of Christchurch hold in their respective colleges. It is not very easy to ascertain at what time the practice of admitting independent scholars to partake of the education furnished by the college first began: it was perhaps coeval with the establishment itself, and parts of the statutes have been supposed to refer to it. The number of boys at Eton, including both collegers and oppidans, was, in the election list of 1846, 777. This, however, exceeds the average number, as the list of election is the fullest of the year.

The oppidans board either in the houses of the lower master or assistants: or, at a somewhat lower charge, in the boarding houses attached to the school; some few, chiefly of noble birth, in private lodgings, under the care of private tutors. In any case, however, each is placed by his relatives under the care of the lower or some one of the assistant masters as his tutor. The head master receives annually, from each six guineas a year; the tutor ten: the board, with its attendant expenses, in a boarding-house, is usually estimated at fifty. It has been also for a long time the custom at Eton for each oppidan, on leaving school, to present the head master with a fee, which varies according to the circumstances or inclination of the individual, but is seldom less than 10*l*.

The classification of boys, according to proficiency, in forms and removes, at Eton, (which, with some variations, has been pretty generally adopted elsewhere,) comprehends both oppidans and collegers without distinction.

The removes or changes of place occur in June and immediately before the Christmas holidays, so that promotion takes place twice in each year. There are four removes in the third form, three in the fourth, two in an intermediate form between the fifth and fourth forms, which is called the Remove, two in the lower division of the fifth form, and two in the middle division. When a boy has reached the upper division of the fifth form, there are for him no more half-yearly changes. He passes into the sixth form, when there is a vacancy, according to his place in the division. The lower school contains the first, second, and third forms.

The examination takes place in passing from the first to the second form, from the second to the third, and from the two lower removes to the two upper removes of the third form. Occasionally a boy of greater proficiency is allowed to take a higher remove *per saltum*.

In the upper school the examinations take place on passing from the fourth form to the remove, and from the lower remove of the lower division of the fifth form to the upper. The other half-yearly changes take place without examinations; but no boy is permitted to proceed without a favourable character from the master of his division or class.

The head master's division varies from 30 to 36. The other classes are of larger size, decreasing, however, in number as they reach nearer to the sixth form.

This form contains from 20 to 22. Several of the fifth form are added to make up the head master's division.

All boys below the fifth form are, by the constitution of Eton, fags; which implies that each is assigned to some upper boy as under his particular authority, and also that the whole of the lower boys collectively are liable to fag for the fifth and sixth forms: so that one of the latter meeting one of the former, has a right to command his services, unless he be on an errand for his own individual master or some other. But it is almost unnecessary to add, that the supposed severity and degradation of fagging are in general greatly exaggerated.

The first seven of the collegers and the whole of the oppidans in the sixth form are called *præpositors*, and act in some measure as assistants to the masters, having a certain jurisdiction in enforcing the discipline of the school among the lower boys, and on certain occasions even among those of the fifth form.

The head of the whole school is generally a colleger, and is styled captain. As the collegers are subject not only to the examinations which take place in passing from the remove to the fifth form, but also to a yearly examination, either by the provost and head master or by the six electors, the captain of the collegers holds his place by merit, and not by seniority.

The sessions of all parts of the school take place at the same time, but in different rooms.

The arrangements of Eton with respect to school-hours are nearly as follows:—Three days in the week are whole school-days; two half, and one whole holiday, besides such as are occasional; but a saint's day, when it occurs, is only substituted for the ordinary whole holiday. On a whole school-day, there are four school-times; on a half holiday, two. These school-times vary from an hour and a half to three-quarters of an hour in length, the longest being the earliest. This first school-time is in general, and in most forms, devoted to the repetition of tasks learnt by heart; the others, to the reading of passages in Greek and Latin authors. These readings are thus managed:—the whole remove, or the whole form, having a particular portion of an author to prepare beforehand, are expected to be ready for it in school: when the master "calls up" a certain number, taken at hazard, with each of whom he construes a part of it, until school-time be over. But the task of preparation for these readings, which of course occupies the greater part of the time devoted to education, is performed, not in school, but in private; that is, in general, by the upper boys in their private rooms, or "studies," with the occasional assistance of their public tutors; by the lower boys, in the "pupil-rooms" of their tutors, and under their eye.

The amount of classical works actually read through in the course of school business is very small. Even in the upper school, Homer's *Iliad*, Virgil's *Æneid*, and Horace, are the only books which it is customary to read through by fixed portions: and these are so small (thirty or forty lines in general) that it takes a very long time to get regularly through them. In reading them, the boy is required to attain a correct grammatical knowledge of construction, and of historical and mythological subjects, by their perusal. The well-known Eton *Latini* and Greek Grammars form the bases of the grammatical instruction of

the school: these are learnt by heart; and boys also are expected to be able to repeat and apply their rules, when called upon, to that portion of the author which they are reading. Other classical works are read only in volumes of extracts taken from a few of the Greek and Latin poets and prose writers; mostly compiled for the use of Eton school. A play of some Greek tragic author is also usually in the course of reading by the upper school. It must not, however, be supposed that the routine of lessons gone through in school comprises the whole or even a large part of the reading of the more studious boys. Much more is read at other hours with their tutors, and much in private under their advice and direction.

But in every part of the school, and more especially as the boy advances towards the highest, his powers are especially directed towards classical composition. A certain number of exercises, as they are termed, are expected every week from each boy, unless in the event of one of those occasional festivals, which are termed whole holidays without exercise, on which one is excused. These exercises, in the upper school, consist of Latin themes, that is, prose compositions, generally on moral subjects; translations into English from classical writers; Latin verses, lyrical, heroic, and elegiac; and, occasionally, Greek verses and themes. A certain length of exercise is required; but boys are allowed and stimulated to exceed that amount; and when the exercises (after being revised by the public tutor) are sent in to the master, he selects a few of the best, which are publicly read in school, and for which certain rewards are given. As the actual work done in school is about the same for all the upper school, that is, for boys varying in age from fourteen to nineteen, it may be supposed that by far the greatest share of labour, by the most advanced and industrious boys, is bestowed on composition; and hence arises the merited celebrity of Eton in this branch of classical attainment.

Little attention was paid at Eton, until lately, to religious instruction: it is now, however, considerably increased. The Duke of Newcastle, a few years ago, founded a scholarship, and a medal for classics and divinity. There are usually between 30 and 40 candidates, of whom the best becomes scholar, the next in merit is medallist, and considerable proficiency is shown in these examinations.

With respect to the habits of life, and domestic government of boys at Eton, some difference subsists between collegers and oppidans. The former attend prayers every evening and also on Sunday morning in the lower school, and then retire to their several rooms or dormitory. The collegers also have their dinners in the college hall. The sixth form have a supper-room in the new buildings, as have also the first six of the fifth form. The remaining 54 keep in the hall.

The oppidans in the tutors' houses, and in some of the dames' houses, have daily evening prayers. Prayers take place on Sunday in every house, morning and evening. In the tutors', all boys have single rooms except brothers, who are generally placed together in larger rooms. In the dames' houses only a small portion have single rooms. The rest are placed two in a room, and sometimes, but rarely, three.

The number in dames' houses is not restricted; in tutors' houses it never exceeds 30.

All boys attend chapel twice on Sundays, and at 11 and 3 on all other days when there is no school at those hours.

Such is a brief review of the scholastic system of Eton; from which it will be observed, that the course of instruction is essentially classical. But of late years the study of mathematics has extended very far in every part of the school. The same may be said of French. German and Italian are learned only by a few. There are many pupils in drawing and water colours. All these studies, however, are left to the choice of the parents; but when they have signified their wishes, attention is enforced as much to them as to the ordinary school lessons.

A prize for the encouragement of modern languages has, within a few years, been established by His Royal Highness Prince Albert to the amount of 50*l.*; and another for mathematics by G. Tomline, Esq., M.P. The examinations for these prizes have been satisfactory. There are several other school prizes: viz., for an English historical essay in the head master's division; for tasks or exercises in Greek or Latin verses composed during the Easter and Christmas vacations; for declamations to collegers in the sixth form previous to Easter and Christmas; and others for themes and verses in the higher divisions of the school.\*

With regard to the remaining public schools of England, those which are possessed of ancient and considerable endowments have been, in general, governed by regulations of their own, and not framed on the Eton model. All, however, more or less resemble it. And those which have been raised to the rank of public schools, from mere common charter or free schools, in modern times, have in general formed their discipline and government after the fashion of that of Eton, and employed the same school books; unless where some innovations have been made in later times. To the former class belong Winchester, Westminster, and the great metropolitan schools: to the latter, Harrow, Rugby, Shrewsbury, &c.

*Winchester College* is the most ancient of the English public schools; it has also preserved, partly in consequence of that circumstance, many peculiarities of feature and constitution, in which it differs from Eton and the great majority of schools formed on its model. It was founded by the famous William of Wykeham, Bishop of Winchester (born 1324, died 1404), in 1382, nearly at the same time as his other splendid establishment, New College, Oxford (described under the head of that university), to which it was intended to serve as a nursery. The foundation consists of a warden, a schoolmaster, and usher, ten fellows, seventy scholars to be instructed in grammatical learning, three chaplains, three clerks, and sixteen choristers. The fellows at Winchester, as at Eton, have residences provided for them; but are unconnected with the business of the school.

The seventy scholars are admissible from eight to seventeen years of age. There are usually about 200 or 250 boys in all, including those not on the foundation. Vacancies are filled up at the election in July, both for Winchester, and New College, Oxford, much in the same manner

\* This account of Eton has been revised by the highest authority, and gives a perfectly accurate account of the present state of the school.

as that already described with respect to Eton and King's. Two rolls are made: that for the New College consists of two founders' kin, elected on examination; they are not superannuated until twenty-four years of age. The remainder of the roll is filled up from the best qualified of the upper boys of the school, elected on examination, with a preference for some (called superannuates) between eighteen and nineteen, who leave the school immediately after election. These are sent to New College as vacancies occur. The roll for Winchester is made up, first, of two founders' kin; and, next, of boys nominated in turn by six electors: the wardens of New College and Winchester, the two posers from New College, the subwarden of Winchester, and the head-master.

Boys on the foundation are provided with board and lodging within the walls of the college. The remainder are lodged under the immediate care of the head master, in a pile of buildings contiguous to his house, and forming part of the college.

The scholars are liable only to annual payments amounting to about 20*l.* a year, besides their travelling expenses, &c.

*Westminster College*, the second great scholastic establishment of royal foundation, was established by Queen Elizabeth in 1560; but it only replaced a school of great antiquity and celebrity, which had been attached to the ancient abbey.

Westminster College is not, like the other great schools, endowed with lands and estates of its own. But the revenues of the collegiate church of Westminster are charged with the support of two masters and forty scholars (called king's scholars). The scholars are lodged and boarded in the dormitory and hall of the school: they wear a gown, cap, and college waistcoat. The number of independent scholars (town boys) varies according to circumstances: some are boarders; others day boarders, lodging at home. The expense of the education of both classes of boys has recently been much reduced; and that of the king's scholars will not in future exceed, all charges included, 45*l.* a year. The scholars, being elected from the school at large, for merit, form a superior class. At the end of the fourth year, eight or ten of the senior boys on the foundation are elected off, according to the vacancies occurring, to Christ-church, Oxford, and Trinity College, Cambridge (see Oxford and Cambridge). The election for scholars is after an examination of a very peculiar character, in which the boys hold disputations with each other, *virâ voce*, in Latin and Greek (termed challenges), and take places according to their success. There are 10 or more elected out of twenty, thirty, or forty candidates, of the lower forms of the school, boys not being admitted into college after the age of 14. The number of boys in the school varies according to circumstances: of late years it has been comparatively small. The Westminster holidays, differing from those of most public schools, are at Christmas, Whitsuntide, and in the month of August.

The principal metropolitan endowed schools, not collegiate, are—

1. *The Charterhouse*.—This foundation stands on the site of a Carthusian convent founded by Sir Walter de Manny in 1361: and its name is derived from a corruption of the French appellation, *Chartreux*.

After the suppression of the monasteries this estate passed through several hands, and was finally sold by the Earl of Suffolk to Thomas Sutton, Esq., citizen and girdler, in 1611; who founded on it the hospital and school of the Charterhouse, with large endowments, the gross rental of which, in 1815, was not less than 22,000*l.* per annum. Among the governors are generally some of the highest personages in the country; and vacancies in their number are filled up by a majority of their voices. There are on the foundation boys of two classes—pensioners and scholars; both nominated in rotation by the governors. The number of pensioners is limited to eighty, that of scholars to forty-four; the former are fed and lodged at the expense of the hospital, and have a pension of 25*l.* per annum and one cloth gown: the scholars are educated wholly at the expense of the hospital. By its statutes, none can be admitted under the age of ten, nor above fourteen. The course of classical study in the Charterhouse is similar to that pursued at other public schools; but it has a Latin and Greek grammar of its own. The exhibitions to the universities do not appear to be specifically limited in point of number: boys are elected to them by the board of governors, on examination: they have their option, both as to college and university; and are allowed 80*l.* a year for the first three years, and 100*l.* for proceeding to the degree of B. A. Gratuities of 100*l.* are given to those scholars who do not proceed to either of the universities. There are also some additional exhibitions to particular colleges at Oxford, given by the will of a benefactor. Some of the boys, not on the foundation, are boarded by the masters, and the others attend the school daily and reside with their parents. Their number fluctuates according to the causes which control those of other public schools, but of late years it has been comparatively limited.

2. *St. Paul's School* was founded, in 1509, by the celebrated and excellent John Colet, D.D., dean of St. Paul's (born 1466, died 1519); who conveyed for that purpose his estates in the city of London to the Mercers' Company, whom he constituted governors of the school. He drew up, with his own hand, rules for its government; which are curious, from the mixture of an enlightened generous liberality, which did not often accompany the charitable spirit of the age, with a quaintness peculiar to it. Thus, while instead of adopting the local restrictions usual among his contemporaries, he directs that in his school shall be taught "Children of all nations and countries indifferently," he limits their number to 153, in allusion to that of the fishes caught by St. Peter. He appointed the learned Mr. William Lilly, one of the earliest teachers of Greek in this country, first master of the school; and it deserves to be mentioned that Erasmus, who was an intimate friend and correspondent of Colet, contributed, at his request, the greater portion of the Latin Syntax, and sundry emendations, to the famous grammar published under the name of Lilly, and especially intended for the use of the new seminary. Erasmus, also, contributed some minor works, at Colet's suggestion, in express furtherance of the same benevolent object.\* This is a free, and was, till lately,

\* Colet was himself a contributor to the grammar: see Knight's *Life of Colet*, pp. 112–17, ed. 1823, a valuable and an instructive work, and the art. Lilly, in the *Penny Cyclopædia*.

strictly a classical school; but the study of mathematics has been recently introduced. Scholars are admitted up to the age of 15, and are superannuated at 19. The school possesses, from a benefaction of Lord Camden (A.D. 1633-34), who was educated in it, two exhibitions to Trinity College, Cambridge, respectively of the value of 100*l.* and 80*l.* a-year. Two other exhibitions are given annually, out of the general revenue of the school, of the yearly value of 120*l.* and 50*l.* There are, besides, various smaller exhibitions to Cambridge. The scholars are admitted, and the exhibitioners nominated, by the Court of Assistants of the Mercers' Company after the annual examination, which takes place in the fourth week after Easter. The school has a high master, surmaster, under master, assistant master, and a mathematical master, and, deservedly, enjoys a high character.

3. *Merchant Tailors' School* was founded in 1561 by Sir Thomas White, and endowed by him and other members of the Company. It has a principal and four under masters. The number of boys is usually limited to about 250, who are presented in rotation by members of the Company's court. This school has forty-three fellowships at Oxford (of which thirty-seven are at St. John's), and seven at Cambridge; besides numerous scholarships and exhibitions. Mathematics, French, and writing have been recently introduced as part of the education in this school; instruction in writing is given by two extra masters.

4. *Christ's Hospital*, more commonly known as the Blue-coat School, is one of the noblest institutions in London. It was incorporated by Edward VI. in 1553, and owes its origin to the active benevolence of some distinguished citizens. It was intended to maintain, clothe, and educate the young and helpless; and 340 boys and girls were admitted soon after its foundation. A second charter from Charles II. in 1673, provided for the education of 40 boys in mathematics and other learning calculated to qualify them for the sea-service. The management of the institution is vested in a body of governors, consisting of the Lord Mayor and Court of Aldermen, and twelve Common Councilmen, elected by the other members of the Council, with a large number of eminent individuals (at present, 1846, nearly 500, including Her Majesty the Queen), who have each contributed at least 400*l.* to the funds of the institution; but recently the qualification for a governor has been raised to 500*l.* Children are admitted on the presentation of the governors, and the privilege of presentation is thus regulated: each member of the Court of Aldermen has one presentation annually at Easter, the Lord Mayor for the year having one extra; the president, who is usually an alderman, has two extra, and the treasurer two also, besides his presentation as a governor. Every new governor made in the preceding year has one, and the remaining vacancies are then filled by the other governors in rotation, each of them coming in turn usually every third year. The present (1846) revenue of the hospital, arising from rents, benefactions (which vary from 6,000*l.* to 10,000*l.*), and all other sources, amounts to about 44,000*l.* a year, and its expenditure to nearly as much. Its establishment in London, on the site of the Old Grey Friars' monastery, accommodates, at present, 918 boys; and it has attached to it a subsidiary establishment at Hertford, for the younger children, where there are now

437 boys and 76 girls, making in all 1,431 children, maintained, clothed, and educated by the establishment. There are schools for grammar, mathematics, writing, drawing, and French. The Grecians, or those most advanced in the grammar-school, are sent with valuable exhibitions to Oxford and Cambridge, and those in the mathematical school are placed with commanders of ships, and equipped with clothing and nautical instruments, at the hospital's expense. Others are apprenticed to different trades. A magnificent building, called the Great Hall, erected by public subscription, and finished in 1829, opens towards Newgate-street, and is one of the finest ornaments of the city. The hall, in which the children breakfast, dine, and sup, is 187 feet in length, 51 in width, and 46½ feet high. The well known dress of the boys, which has not been changed since the formation of the institution, is not merely grotesque and antiquated, but inconvenient and uncomfortable; and it is certainly high time that it were modified. Presentations cannot be obtained except through governors.

5. *The City of London School*, established in 1835, may be said to have resulted from the inquiries of the Charity Commissioners. A Mr. Carpenter, town-clerk of London, in the reign of Henry VI., had left an estate charged with the maintenance and education of *four* boys, the value of which had greatly increased without any more extended application of the funds. Repeated inquiries and remonstrances at length induced the corporation to establish a school on the site of Honey-lane market, Cheapside. The system of instruction includes classics, mathematics, modern languages, and all the usual branches of a general education; and the school is attended by upwards of 500 boys. Fourteen valuable scholarships and exhibitions to Oxford, Cambridge, and the University of London are attached to the school. The buildings, occupying a space 180 feet in length, and 80 feet in breadth, are commodiously contrived, and have externally some pretensions to architectural elegance.

Of the remaining schools of the kingdom usually considered as public, *Harrow* may, perhaps, claim the first rank: although poor in point of endowment, being, in fact, only a common grammar-school, which, by a concurrence of circumstances, has become an established place of education for the wealthier classes. The free grammar-school of Harrow was founded in 1571, by John Lyon, a yeoman of the parish; who conveyed property to six trustees (styled governors) for the endowment of a schoolmaster and an usher; for the gratuitous instruction of the children of the parish; and for the endowment of four poor scholarships or exhibitions for the two universities. He gave, however, permission that the schoolmaster might receive *foreigners* in addition to the youth of the parish, and take such stipends of them as he could get. By degrees the little parish school rose into a fashionable place of education; and the only parishioners who took advantage of it were such as, from station in society, could place their children on a footing with the "foreigners." The inhabitants of the parish endeavoured, in 1809, to reform the constitution of the school for their own benefit, by an appeal to the Court of Chancery; but judgment was pronounced in favour of the present system.

The governors of Harrow are, according to the statutes, to be six of

the noblemen and gentlemen who reside in the parish; but a liberal interpretation has been put on the condition of residence. They appoint the head-master and under-master: the number of assistants being fixed by the head-master himself. The school has, since its foundation, been endowed with four scholarships by private benefactors; but has no other university advantages. The boys of the foundation board at home, and are exempted from the payment of school fees: their number is always small. The remainder board either with the master, or at private boarding-houses; each being under the tutorship of a master, according to the selection of his relatives. The number in a school possessing no foundation of consequence, varies, of course, with the popularity of the master; and has, of late years, fluctuated very greatly. The system of education at Harrow, both in points of form and discipline, and in more substantial matters, has always been closely modelled on that of Eton; which Harrow has at different times since its foundation rivalled in public opinion among the higher classes. The only material difference in respect of discipline is, that fagging is confined to boys below the fourth form; of whom there are usually only a very small number. He who from circumstances is so situated as to have a fag of his own, is therefore a highly privileged individual.

In respect of the instruction communicated at Harrow, some important innovations on the old scholastic system were made under the superintendence of a late head-master, Dr. Longley; both in classical learning, by the introduction of books of extracts from good authors, exclusively for the use of the school, and in other respects, by some additional attention to mathematical study, to geography and modern history: and an increased instruction in divinity. The age of boys at Harrow is nearly the same with that of the oppidans at Eton: the majority do not come to the school until after twelve, and do not remain much later than seventeen.

*Rugby School*, in Warwickshire, was founded by Lawrence Sheriffe, citizen and grocer of London, in 1567. Its high character as a public place of education commenced after its regulation by a private Act of Parliament in 1777. Like Harrow, it combines gratuitous instruction for the boys of Rugby and its neighbourhood (who are considered as on the foundation), with the education of a considerable number of boys, varying from 300 to 450, from all parts of the country, at their own expense. The head-master keeps a boarding-house: there are also private boarding-houses. By the statutes no boy can be admitted after fifteen, nor remain after nineteen; but the age at which they enter, and the duration of their stay at school, are much the same as at Eton and Harrow. The vacations are only two—at Christmas and Midsummer. Rugby has fourteen valuable exhibitions at either university, but no other patronage.

Considerable alterations were introduced by the late head-master, the celebrated Dr. Arnold, into the discipline of Rugby school, and into the course of education pursued there; some account of which may be found in one of the early volumes of the *Quarterly Journal of Education*. The acquisition of modern languages, and the study of modern history, have been rendered essential parts of the instruction of

the school; which has in other respects been rendered more comprehensive in its character.

The free-schools at Reading, Repton, Manchester, and Shrewsbury, are also enumerated among public schools, in the later accounts of those establishments. In ordinary language, however, they are not so designated, except perhaps the last. There is, in fact, no distinction, except that of usage, which has elevated Rugby and Harrow, although unendowed to any great amount, to the character of public schools; and by which, from time to time, others also are so designated, according as the talents and popularity of the head-master, or other adventitious circumstances, make them places of resort for the scholastic education of children of the higher orders. This has been especially the case with Shrewsbury, which for many years, while under the superintendence of Dr. Butler, afterwards Bishop of Lichfield, was generally ranked among the great public schools of the country. This school is also rich in scholarships and exhibitions. The number of boys is from 250 to 350. Of late years it has been celebrated for the proficiency in classical scholarship, particularly in Greek and Latin composition, and in grammatical learning, which has been attained by its pupils; who have carried away a very unusual proportion of the prizes and other classical honours awarded at the two universities.

*Income of Endowed Schools.*—The total number of endowed schools in England and Wales is very great, and the revenue at their disposal much larger than is generally imagined. We believe, indeed, that if the property set apart by the benevolence of private individuals, for the purpose of providing for education in England and Wales, were judiciously and economically administered, it would go far to furnish funds, not only for the support of the existing schools, but to defray a large portion of the cost of a proper system of national instruction. According to the Digest of the Reports of the Commissioners, printed in 1841, the sums appropriated for the purpose of education in endowed and unendowed schools were as follows:—(See p. 330.)

It appears from this table, that, under the present defective and slovenly management, the income of endowed schools, exclusive of the sum appropriated to that purpose by the chartered companies of the metropolis, amounts for grammar schools to 152,048*l.*, for schools not classical to 141,385*l.*, and for educational purposes to 19,112*l.*, making a grand total of 312,545*l.*, which, under efficient management, and including the contributions of the metropolitan companies, would no doubt amount to 500,000*l.* a year.

But exclusive of this, it is seen from the Digest referred to above, that a large mass of property, amounting to no less than 1,209,296*l.* a year, is appropriated to other charitable purposes, the utility of many of which, though undisputed when the grants were made, has now become exceedingly doubtful. We admit the difficulties that stand in the way of legislative interference in such cases, but they are not insuperable; and it appears to be at variance with every principle on which society is founded, to continue to lay out property on institutions, or for objects that have been ascertained to be either injurious or of little utility, when it might be employed to promote objects of undoubted

*Account of the Annual Income of Grammar and other endowed Schools, &c., in the different Counties of England, and in Wales, according to the Returns of the Charity Commissioners.*

national importance. The subject of endowments ought to be carefully sifted. The regulations of the founders should be respected only so long as they conduce to, or, at all events, are not opposed to, the public interest. Whenever they come into conflict with the latter, they certainly should be modified, and made to harmonise with what it may reasonably be presumed would have been, could he have foreseen the results, the will of the founder. By cautiously acting on this principle, we have little doubt that a free revenue might be obtained, without injury to any useful purpose, for educational objects, in England and Wales, of 750,000*l.* a year.

*Universities.*—The universities of England, like those of most continental countries, were originally framed on the model of that of Paris, the most ancient and most celebrated of them all. At how early a period schools and places of education of general resort may have existed in Oxford and Cambridge, is a question which cannot be distinctly answered, and which, luckily, is of little importance. But, whatever their origin, the educational establishments in these

the school; which has in other respects been rendered more comprehensive in its character.

The free-schools at Reading, Repton, Manchester, and Shrewsbury, are also enumerated among public schools, in the later accounts of those establishments. In ordinary language, however, they are not so designated, except perhaps the last. There is, in fact, no distinction, except that of usage, which has elevated Rugby and Harrow, although unendowed to any great amount, to the character of public schools; and by which, from time to time, others also are so designated, according as the talents and popularity of the head-master, or other adventitious circumstances, make them places of resort for the scholastic education of children of the higher orders. This has been especially the case with Shrewsbury, which for many years, while under the superintendence of Dr. Butler, afterwards Bishop of Lichfield, was generally ranked among the great public schools of the country. This school is also rich in scholarships and exhibitions. The number of boys is from 250 to 350. Of late years it has been celebrated for the proficiency in classical scholarship, particularly in Greek and Latin composition, and in grammatical learning, which has been attained by its pupils; who have carried away a very unusual proportion of the prizes and other classical honours awarded at the two universities.

*Income of Endowed Schools.*—The total number of endowed schools in England and Wales is very great, and the revenue at their disposal much larger than is generally imagined. We believe, indeed, that if the property set apart by the benevolence of private individuals, for the purpose of providing for education in England and Wales, were judiciously and economically administered, it would go far to furnish funds, not only for the support of the existing schools, but to defray a large portion of the cost of a proper system of national instruction. According to the Digest of the Reports of the Commissioners, printed in 1841, the sums appropriated for the purpose of education in endowed and unendowed schools were as follows:—(See p. 330.)

It appears from this table, that, under the present defective and slovenly management, the income of endowed schools, exclusive of the sum appropriated to that purpose by the chartered companies of the metropolis, amounts for grammar schools to 152,048*l.*, for schools not classical to 141,385*l.*, and for educational purposes to 19,112*l.*, making a grand total of 312,545*l.*, which, under efficient management, and including the contributions of the metropolitan companies, would no doubt amount to 500,000*l.* a year.

But exclusive of this, it is seen from the Digest referred to above, that a large mass of property, amounting to no less than 1,209,296*l.* a year, is appropriated to other charitable purposes, the utility of many of which, though undisputed when the grants were made, has now become exceedingly doubtful. We admit the difficulties that stand in the way of legislative interference in such cases, but they are not insuperable; and it appears to be at variance with every principle on which society is founded, to continue to lay out property on institutions, or for objects that have been ascertained to be either injurious or of little utility, when it might be employed to promote objects of undoubted

their origin, foundations for the benefit of poor students, raised by the munificence of private individuals. In these foundations, a certain number of youths were admitted as scholars, for whom lodging was provided, and a provision toward their maintenance, that they might enjoy the benefit, in which all participated alike, of the nearly gratuitous instruction of the university; a certain number, generally of graduates, denominated fellows, received a higher provision; the head of the institution, being called by the various names of principal, rector, master, warden, dean, &c. These colleges were appropriated, according to the caprice of the founder, to the natives of particular districts, students of particular schools, &c. Finally, a university, under the ancient system, was completed by the appointment of professors, or recognised public readers in the faculties, paid by salaries instead of the small fees previously received by the regents,—an innovation which, in the course of time, materially interfered with the right of lecturing by simple graduates, though they continued to exercise that right down to a very late period.

Such, in a few words, is the outline of the constitution of universities, according to the usual form of these institutions in the fourteenth and fifteenth centuries. But in process of time, their constitution was materially changed in all countries; and in none, perhaps, has it been more changed than in England. Hence, though the foregoing sketch be material to the understanding of the technical language and system of Oxford and Cambridge, their present constitution is widely different from that which it delineates. The steps by which the alteration took place were very gradual, and chiefly originated in the increased influence of the colleges.

The oldest college in Oxford is supposed to be Merton, founded by John de Merton, about 1261. Peterhouse, as a college, is the most ancient in Cambridge, although St. John's existed before it as an endowed religious house; its charter of foundation bears date 1283. From that period to the Reformation, the progress of collegiate foundations was continual. Fourteen colleges were founded before the Reformation in Oxford: thirteen in Cambridge. The number of students in the two universities was greatest in the thirteenth century, when they were calculated, in each, at many thousands. In the following century they greatly diminished, owing partly to the decreasing repute of the scholastic philosophy, and partly to civil war,—a tendency which was still farther increased by the religious disturbances of Henry VIII.'s reign; so that at the Reformation, while the colleges had become comparatively numerous, the halls had fallen into much decay, and both universities were nearly destitute of students, except those attracted and supported by the charitable foundations of the colleges. In 1500, the inhabited halls in Oxford were reduced to fifty-five: in 1546, to eight; and the few which survived, did so from their becoming the property of colleges, while others were merged in the colleges themselves.

When, therefore, after the Reformation, the universities began to be again frequented by numerous students, the colleges almost alone survived the wreck of the ancient university institutions. It was, probably, not until the sixteenth century that they received inde-

pendent members, unconnected with their foundations, as students. But in the course of that century the whole academical population became congregated within their walls and those of the few licensed halls. Several new colleges were also founded in both universities during that century, and various halls transmuted into colleges. In the reign of Elizabeth, when the new system had become fully established, the regent masters were deprived of the initiative in legislative measures in the House of Convocation in Oxford, which was transferred to the hebdomadal meeting of heads of houses; and the council or meeting of high functionaries, styled the Caput, was invested with the power of putting a previous veto on any grace, *i. e.*, legislative measure, to be proposed in the senate at Cambridge.\* The statutes of Oxford were reduced into a body under Archbishop Laud (chancellor of the university) in 1638, and still form the recognised academical code; though since that period, the greater part of them has become virtually obsolete, and the change from the ancient university system to the modern confederacy of colleges has been completely effected. In the first place, all substantial examination for degrees (except the lowest in arts, to which may be added at Cambridge the lowest in civil law and in medicine) has been discontinued. The other degrees are conferred, as of right, on those who have attained a particular standing, without reference to proficiency, or (with some slight exception) the necessity of residence. Consequently, all compulsory attendance on the lectures of the public readers or professors in the various faculties has been nearly dispensed with; and, with few exceptions, they are now attended only by voluntary hearers. The *necessary* education of Oxford is confined to that required to attain the degree of bachelor of arts. The amount of proficiency indispensable for the attainment of this degree is fixed by the university; and it is conferred on such only as have satisfied public examiners of their having attained this proficiency. The instruction required for this object is furnished by the tutors of the several colleges. And as no one can belong to either university, unless he have been entered at, and have resided within the jurisdiction of, one of its colleges or licensed halls, so no one can attain the university degree of B.A. unless he have gone regularly through the course of collegiate instruction of the house to which he belongs. The system of honours, that is, the system of classifying the competitors for the degree of B.A., according to their proficiency, is of modern institution. This preliminary notice seemed to be necessary, by way of introduction, to a description of the English universities. In proceeding to lay before the reader an account of their present constitution, and of the education which they give, we begin with Oxford; but the greater part of the usages which we shall detail are common to both; and, where any difference may exist, it will be specially noticed.

The colleges of which each university is composed are to be regarded in a double light: in the first place, as charitable foundations for the maintenance of a number of students, and of resident graduates; in the next place, as houses of education, in which youths desirous of

\* See a letter by Casaubon, dated July, 1613, giving an account of the University of Oxford, and of the Bodleian Library, in Hallam's *Literature*, iv. 86.

their origin, foundations for the benefit of poor students, raised by the munificence of private individuals. In these foundations, a certain number of youths were admitted as scholars, for whom lodging was provided, and a provision toward their maintenance, that they might enjoy the benefit, in which all participated alike, of the nearly gratuitous instruction of the university; a certain number, generally of graduates, denominated fellows, received a higher provision; the head of the institution, being called by the various names of principal, rector, master, warden, dean, &c. These colleges were appropriated, according to the caprice of the founder, to the natives of particular districts, students of particular schools, &c. Finally, a university, under the ancient system, was completed by the appointment of professors, or recognised public readers in the faculties, paid by salaries instead of the small fees previously received by the regents,—an innovation which, in the course of time, materially interfered with the right of lecturing by simple graduates, though they continued to exercise that right down to a very late period.

Such, in a few words, is the outline of the constitution of universities, according to the usual form of these institutions in the fourteenth and fifteenth centuries. But in process of time, their constitution was materially changed in all countries; and in none, perhaps, has it been more changed than in England. Hence, though the foregoing sketch be material to the understanding of the technical language and system of Oxford and Cambridge, their present constitution is widely different from that which it delineates. The steps by which the alteration took place were very gradual, and chiefly originated in the increased influence of the colleges.

The oldest college in Oxford is supposed to be Merton, founded by John de Merton, about 1261. Peterhouse, as a college, is the most ancient in Cambridge, although St. John's existed before it as an endowed religious house; its charter of foundation bears date 1283. From that period to the Reformation, the progress of collegiate foundations was continual. Fourteen colleges were founded before the Reformation in Oxford: thirteen in Cambridge. The number of students in the two universities was greatest in the thirteenth century, when they were calculated, in each, at many thousands. In the following century they greatly diminished, owing partly to the decreasing repute of the scholastic philosophy, and partly to civil war,—a tendency which was still farther increased by the religious disturbances of Henry VIII.'s reign; so that at the Reformation, while the colleges had become comparatively numerous, the halls had fallen into much decay, and both universities were nearly destitute of students, except those attracted and supported by the charitable foundations of the colleges. In 1500, the inhabited halls in Oxford were reduced to fifty-five: in 1546, to eight; and the few which survived, did so from their becoming the property of colleges, while others were merged in the colleges themselves.

When, therefore, after the Reformation, the universities began to be again frequented by numerous students, the colleges almost alone survived the wreck of the ancient university institutions. It was, probably, not until the sixteenth century that they received inde-

pendent members, unconnected with their foundations, as students. But in the course of that century the whole academical population became congregated within their walls and those of the few licensed halls. Several new colleges were also founded in both universities during that century, and various halls transmuted into colleges. In the reign of Elizabeth, when the new system had become fully established, the regent masters were deprived of the initiative in legislative measures in the House of Convocation in Oxford, which was transferred to the hebdomadal meeting of heads of houses; and the council or meeting of high functionaries, styled the Caput, was invested with the power of putting a previous veto on any grace, *i. e.*, legislative measure, to be proposed in the senate at Cambridge.\* The statutes of Oxford were reduced into a body under Archbishop Laud (chancellor of the university) in 1638, and still form the recognised academical code; though since that period, the greater part of them has become virtually obsolete, and the change from the ancient university system to the modern confederacy of colleges has been completely effected. In the first place, all substantial examination for degrees (except the lowest in arts, to which may be added at Cambridge the lowest in civil law and in medicine) has been discontinued. The other degrees are conferred, as of right, on those who have attained a particular standing, without reference to proficiency, or (with some slight exception) the necessity of residence. Consequently, all compulsory attendance on the lectures of the public readers or professors in the various faculties has been nearly dispensed with; and, with few exceptions, they are now attended only by voluntary hearers. The *necessary* education of Oxford is confined to that required to attain the degree of bachelor of arts. The amount of proficiency indispensable for the attainment of this degree is fixed by the university; and it is conferred on such only as have satisfied public examiners of their having attained this proficiency. The instruction required for this object is furnished by the tutors of the several colleges. And as no one can belong to either university, unless he have been entered at, and have resided within the jurisdiction of, one of its colleges or licensed halls, so no one can attain the university degree of B.A. unless he have gone regularly through the course of collegiate instruction of the house to which he belongs. The system of honours, that is, the system of classifying the competitors for the degree of B.A., according to their proficiency, is of modern institution. This preliminary notice seemed to be necessary, by way of introduction, to a description of the English universities. In proceeding to lay before the reader an account of their present constitution, and of the education which they give, we begin with Oxford; but the greater part of the usages which we shall detail are common to both; and, where any difference may exist, it will be specially noticed.

The colleges of which each university is composed are to be regarded in a double light: in the first place, as charitable foundations for the maintenance of a number of students, and of resident graduates; in the next place, as houses of education, in which youths desirous of

\* See a letter by Casaubon, dated July, 1613, giving an account of the University of Oxford, and of the Bodleian Library, in Hallam's *Literature*, iv. 86.

obtaining university degrees are lodged and placed under the superintendence of tutors. In the first point of view, each college is an independent corporation, wholly unconnected with the university at large, except as its members, individually, are subject to its statutes; governed by laws of its own, being for the most part such as were imposed by the original founder, and subject to the inspection of its own visitor, appointed in its charter of foundation.

At the head of each college is the head or principal, an officer called by various titles in different colleges (master, rector, president, warden, &c.). Except in one or two royal foundations, the heads of colleges are appointed by election of the fellows, from among their own number. This office is for life; and they are generally allowed to marry. The incomes of the heads of colleges vary so greatly as to render it impossible to give any definite account of them; they generally arise from the produce of a double fellowship, from college livings attached to the headship, &c. In most colleges the heads are necessarily clergymen. They exercise superior authority in the discipline of the college, considered as a place of education; but in other respects they only form part of its legislative council, being assisted by the fellows. Both at Oxford and Cambridge the heads of colleges exercise an important office in the government of the university, which will be explained when those bodies are considered collectively.

The fellows form the governing body of the college. Their number is everywhere different: some fellowships are constituted by the original foundations, and, in many colleges, others have been added by subsequent benefactors. In numerous colleges in both universities, fellows are necessarily graduates, either by statute or by common usage; having passed the lowest degree, that of B.A., or student in civil law. But this is a rule subject to many exceptions, as every foundation is governed by its own laws; *e. g.* at New College, Oxford, being an establishment connected with the college of Winchester, persons of the founders' kin are fellows as soon as admitted, and the rest after two or three years' probation. The classes of individuals eligible to fellowships are also limited by the statutes peculiar to each establishment, so that the greatest variety prevails. In Cambridge, however, limitations to particular schools, dioceses, and districts are less common than in Oxford; but, on the other hand, it is the ordinary practice in the former university for each college to elect, to its fellowships, only students of its own. From the great size of the colleges of Trinity and St. John, the choice in them is very large, and the election has all the advantages of open competition,—the fellows being elected out of the body of scholars after a strict examination in classical and mathematical learning, and wholly on comparison of their relative merits. In Oxford, all or some of the fellowships, at several colleges, are open to all graduates of the university; but while in some of these the election is on the principle of free competition, and preceded by a strict examination, it is, in others, matter of private interest and favour. The great majority, however, of Oxford fellowships are limited by the will of the founders to particular schools and localities, or come by rotation to such as are already scholars on the foundation. The fellows, therefore, of the two universities constitute a very miscellaneous body, comprising, in some

houses, the highest talent and abilities of each ; while, in others, they are not distinguished by these characteristics.

Fellowships are in general limited to persons studying with a view to holy orders : but there are exceptions to the rule in both universities. Time is allowed by the statutes for an individual elected to make his choice of a profession ; and thus a certain number, who prefer to remain out of orders, vacate their fellowships after a few years. Vacancies are also made by marriage, against which the statutable rule is uniform in all houses ; and by the acceptance of livings in the gift of the college (which are offered to the fellows as they fall vacant in order of seniority), or of any other living or situation statutably incompatible with the fellowship. Thus the succession is in most colleges pretty rapid. The incomes of fellowships are extremely various : the best at Oxford are supposed to be worth, in good years, from 600*l.* to 700*l.*, while many do not exceed 100*l.*, and many at Cambridge fall far short of that sum. They are paid out of the college revenues, which are for the most part received in corn rents, varying with the price of that commodity. The fellows have also a considerable portion of their board provided for them by the college, if in residence. The amount received from a fellowship varies from year to year ; part of the income of a college being usually derived from fines on the falling in of beneficial leases, and the corporate expenses of the college being also very variable. It is usual in most colleges for certain funds to be set apart yearly, derived in part from taxation of the fellowships, in part from the rent of rooms, &c. &c., for the general purposes of the establishment, technically styled "Domus." Out of this fund, repairs of buildings, purchase of livings, &c., are usually made ; and in this manner the great architectural undertakings of late years in both universities, but more especially in Cambridge, have been provided for.

The college tutors, who take charge both of the students on the foundation, and of those who are independent of it, are selected from among the fellows, together with the officers, as dean, bursar, &c. Besides these officers, the fellows are not in general required to be in residence. There are, however, usually a certain number, either taking pupils as private tutors, or residing for purposes of study ; and among the older fellows, there are to be found in most colleges a few who prefer the quiet monotony and ease of a college life to a dwelling elsewhere. It is customary in some colleges for individuals elected to fellowships to pass a year as probationers, during which they receive no income, and are considered as holding their appointment merely at will.

The scholars are under different regulations, and enjoy different advantages, at different colleges. They are upon the foundation ; but not so closely connected with it as the fellows. The period of eligibility varies ; but those elected are always undergraduates. In the larger colleges at Cambridge, the scholarships are numerous, and open to undergraduates of the college, forming small college prizes : at Oxford, the scholars in some colleges succeed by rotation to fellowships. In the latter university they wear a different gown from the rest of the undergraduate students. Scholars are often elected, both in colleges where the competition is open, and where it is restricted,

before they have begun to reside at the university. Scholarships are, as may be supposed, very various in point of emolument; ranging from 100*l.* or 80*l.* to 20*l.* or less per annum, together with some advantages in the way of board. In respect of discipline and education, scholars are on precisely the same footing as the independent students. In some colleges, the body answering to that of scholars bears a different name; as the demies (*semicommunarii*) of Magdalen, Oxford, &c. &c.

Exhibitions are annual pensions, given by colleges, free and endowed schools, &c., to support or aid youths proceeding from them to the universities or to particular colleges. Some are very valuable. Exhibitioners are not in general considered as on the foundation.

Besides these, there are several classes of inferior students (and also choristers in some colleges) provided for, wholly or in part, by the foundations. These poor students bear various names; as, at Oxford, servitors, bible-clerks, (at Christ-church, scholars.) They were generally required to perform some menial offices in the college; a custom of which some relics still subsist. At Cambridge, where they are generally termed sizars, their position is more elevated.

In point of college system, the laws which regulate the several foundations, their component members, and the relation in which they stand to the university, there is no material difference between Oxford and Cambridge. But in tracing the system of education pursued at each, in which both the college and the university perform their respective parts, it becomes necessary to consider the two institutions separately. The following account, therefore, will relate exclusively to the course of study and academical progress of a student at Oxford: the plan pursued at Cambridge will then be detailed separately, in so far as it differs from the former.

Every individual admitted to the University of Oxford (in the language of the place, matriculated) is entered on the books of some college or hall. At the time of matriculation, he is sworn to observe the statutes of the university, or submit to such penalties as may be imposed for their violation; and subscribes his assent to the Thirty-nine Articles. Whether he commence residence immediately on matriculation, depends on circumstances: it is not usually required of him until three or four terms afterwards; nor can he be admitted unless there be room for him in college, as lodging out in the town is in no case allowed to men under twelve terms' standing. There is no difference, in respect of priority of degree, admission, &c., between gentlemen commoners and commoners: the only privileges of the former consist in a particular dress, and in a separate table at the college dinner, with some trifling indulgences in particular colleges. Noblemen, however, and the eldest sons of baronets and knights, have certain advantages; the time for passing the first degree being shortened in their case.

Subjoined is a summary of the different periods at which the several degrees, &c., occur in the course of a student at Oxford. It will be recollected, that there are four academical terms in the year: Hilary, Easter, Trinity (or Act), and Michaelmas; and that the year of academical residence includes, in all, rather more than half the real year.

*Responsions* (preliminary examination), from sixth to ninth term.

*General Sophist* (a mere formal title), after two years.

*Degree of B.A.*, after sixteen terms complete; of which twelve are only necessary in residence.

*Degree of M.A.*, twelve terms from that of B.A.; of which actual residence is requisite during one only. (A master of arts becomes a regent after the act subsequent to his degree: and thus acquires the privilege of voting in convocation. The act is on the first Tuesday in July.)

*Degree of Bachelor in Civil Law*, three years from the regency.

*Degree of Bachelor in Civil Law*, without passing through arts, twenty-eight terms; of which seventeen in residence.

*Degree of Doctor in Civil Law*, five years from B.C.L.; shortened to four for those who intend to practise at Doctor's Commons.

*Degree of Bachelor in Medicine*, one year from regency; doctor in medicine, three years more.

*Degree of Bachelor in Divinity*, seven years from regency; doctor in divinity, four more.

*Degrees in Music* are merely honorary: but the performance of some piece of music is required by way of exercise.

On matriculation, the student is assigned to the superintendence of some one of the tutors of his college. This, however, in most colleges at Oxford, is little more than a form; as all the tutors (two, three, four, or five in number) generally divide both the discipline and instruction of the college among themselves; and the student is equally under the superintendence of them all. The chief part of the instruction imparted by the tutors is comprised in the lectures which they deliver. But these lectures are not harangues, like those of the professors here and in the Scotch colleges, but a species of catechetical exercises intermixed with reading and discussion. The practice is for the tutor or lecturer to go over some portion of a classical or mathematical work, in use at the university examinations, to explain it to his pupils, and to examine them upon it. This appears to be a far more effective method of instruction than that of more formal lectures, even when the latter, which is rarely the case, are followed by examinations. The principal objection to the system turns upon the fact of its being wholly intended and calculated to fit the student for passing the peculiar examinations he will have to undergo; the making him acquainted with the subjects prelected upon in all their bearings being held to be a different and, practically, an inferior consideration. This, however, is an objection that applies to all systems of teaching in which examinations are to be the principal tests of proficiency; and with which, consequently, it is very difficult to deal. Students at Oxford at first generally attend the prelections of three or four tutors each day. There is but little division of labour among the latter in the same house. Divinity is usually part of the province of the dean of the college (the highest of its officers connected with education); and there is, in those which have a considerable number of undergraduates, a tutor whose lectures are confined to mathematics: but, with these exceptions, every portion of the range of subjects constituting the academical education may be taken indifferently by any tutor. Tutors, also, occasionally prelect to a smaller class, consisting of those about

to be examined for honours, on authors of greater difficulty. Besides the lectures, there are college examinations at the close of the term (called collections), occasional compositions in Latin and Greek, and college prizes for composition.

In the sixth or eighth term (unless dispensation be obtained for a later period) after matriculation, the student must pass the preliminary university examination termed *responsions*, or, in common parlance, "little go." This examination is generally in three or four classical authors, selected by the student; and either a portion of the Oxford logic, or a few books of Euclid, according to his choice.

As there is no classification of merit in this examination, there is no temptation to exceed the necessary amount of proficiency. The examiners are termed the masters of the schools. To have thrice failed in passing this examination (in Oxford phraseology, to have been plucked), is generally considered a disqualification for farther pursuing the studies of the university.

After this period, the more important preparation for the public examinations for the degree in arts generally begins in earnest. Those who are anxious to take honours, generally about this time engage a private tutor (not necessarily of their own college) who may be able to render them more assistance, and pay them more exclusive attention than the tutor of the college. The fee of a *private* tutor at Oxford is 50*l.* a year; at Cambridge, where the academical year is rather shorter, 40*l.*

The public examinations for the degree of bachelor of arts are held twice a year; viz., in Michaelmas and Easter Terms. For those who are simply desirous of obtaining the necessary degree, without any honourable distinction, it is necessary to be able to undergo an examination,—1. In divinity: amounting to a general acquaintance with the original gospels, scripture history and doctrine, the Thirty-nine Articles of the Church, and the arguments usually adduced in support of them. 2. In classical literature: generally speaking, two Greek and two Latin authors, selected by the student among those of the more classical æra, with which a pretty accurate acquaintance is required. 3. In logic: this relic of the old discipline of the schools, retained at Oxford only, consists merely of Dean Aldrich's *Compendium of Logic*, which the student is expected to have learnt so as to be able to apply its rules practically to proposed questions. 4. In Latin and English composition.

The examiners for the degree are eight masters of arts, four in classics and four in mathematics, appointed by the vice-chancellor and proctors, with the sanction of Convocation. Those who fail in showing such an amount of proficiency as, in the opinion of the examiners, entitles them to their degree, are said, in the language of the place, to be "plucked;" a phrase which originates in an ancient custom by which any one, who objected to a degree about to be conferred in congregation, notified his dissent by plucking the sleeve of the proctor's gown.

The examination for honours, though different in many particulars at Oxford and Cambridge, is a peculiar characteristic of the system of the English universities. It is, however, of comparatively recent date:

having been first introduced, at Oxford, by the Examination Statute of 1801, remodelled by that of 1807. It has subsequently undergone many alterations; and, from being almost wholly conducted *vivâ voce*, has recently been more assimilated to that of Cambridge, by means of written answers. The present system is on the following footing:—

The candidate for honours may seek to attain them in classical literature and moral philosophy (in *litteris humanioribus*), or in mathematics (in *disciplinis mathematicis et physicis*), or in both. It is, however, indispensably necessary, as a preliminary condition, that he should satisfy the examiners of his proficiency in divinity, although he is not, in general, subjected to a severer trial on this head than those who merely “go up” for a common degree; or “pass,” as it is termed. It is also necessary for the candidate for mathematical honours to “pass,” in the first instance, in classics.

The classical examination is conducted, in the main, on the principle of allowing the student to choose the books in which he is to be examined. These, however, must be pretty numerous, and comprise a tolerably extensive circle of Greek and Latin authors. Nevertheless, it is not common, at Oxford, to find in the university examinations any attention paid to Greek history, or poetry, after the time of Alexander; nor to Latin history, later than the reign of Augustus. The classical æra, with which the Oxford student is rendered tolerably familiar both in respect of historical detail and literary style, is narrowed within a very limited compass; and this, in the opinion of many, is advantageous, because he is thus conversant only with the best models of composition. It may be said that ancient authors are studied, at Oxford, rather in an enlarged than in a critical view. The discipline of the place may inspire the student with the taste of a scholar, but does not, in general, confer that close analytical knowledge of the ancient languages which is so much sought after at Cambridge. Composition, however, as well English as Greek and Latin, is gradually becoming a more and more essential part of the Oxford examinations. And it has been said, that while the plan, until lately, was for each student to be examined separately, an approximation has been made, of late years, to the Cambridge system of “papers;” the same set of questions being proposed in common to a certain number of candidates.

Two treatises of Aristotle,—the *Nicomachean Ethics*, and the *De Rhetorica*,—are still reckoned necessary class-books at an Oxford examination for honours: and some others of his works are occasionally added, at the discretion of the student. These books must be studied, and the substance of their contents committed to memory, pretty exactly: they furnish, likewise, subject-matter for a pretty extended course of examination in moral philosophy and in general literature. Plato is, or was recently, little studied at Oxford. In Greek composition, the principal models studied and followed are the dramatists, Thucydides, and Xenophon: in Latin, Virgil, Horace, &c., generally receive little attention beyond what is necessary to refresh school recollections. Livy is much read, Tacitus less; Cicero, by no means with so much assiduity as might be expected among gentlemen devoted to classical study: nor is elegance in Latin prose composition often

acquired. English composition is generally confined, at examinations, to a few translations, and to an essay or two on philosophical or antiquarian subjects, and is but seldom what might and should be expected. Part of the examination (less considerable now than heretofore) is conducted *vivâ voce*; the examiners successively confronting the student for three or four hours. The classical examination for honours lasts three or four days.

Mathematical examinations are conducted according to the Cambridge system; being, in pursuance of the latest regulations, wholly managed by way of written questions and answers. Out of ten papers of questions (in an examination of 1832), three were in algebra and geometry; two in the differential calculus; one in Newton's Principia, mechanics, hydrostatics, astronomy, and optics, respectively. It has been said, that the qualifications required of a first class man in mathematics, at Oxford, are about the same with those of an inferior wrangler at Cambridge: but it is obviously impossible to institute any exact comparison between them.

When the examinations are concluded, the candidates for honours are *classed*. There are four classes of honours in each branch; the number of those who have "passed" without attaining honours forming the fifth class in the classical branch. Their names are not published; while those included in the two sets of four classes are printed, each class alphabetically, in the university bulletin, and rendered public. There is thus an approximation to a system of ranking according to merit, without its being fully acted on, for all those whose names stand in the same class appear as equals. There are ordinarily from six to twelve names in each of the two first classes: of course, a first class in both classics and mathematics (a "double first," in the language of Oxford) is the highest honour to which a student can attain. Instances are common enough of candidates for honours succeeding only so far as to pass: sometimes they have not even that good fortune; while, on the other hand, individuals who merely go up for a "pass," by evincing an unusual proficiency in their examination, find themselves elevated to the fourth or third class in classics.

This account of the examinations for honours will serve, with proper modifications, as a sketch of the manner in which other examinations are conducted; such as those of the colleges for fellowships and scholarships; those for the open university scholarships, &c. It is only necessary to state that mathematical knowledge generally goes for little in college competitions for fellowships, unless the college should chance to be in want of a mathematical tutor.

With the degree of B.A., or, rather, with the examination for it, the academical course of a student virtually ends; and a majority, including most of those not destined for the church, leave the university immediately afterwards; having remained there three or four years. The expenses of an undergraduate vary so materially, according to the habits of each individual, that it is impossible to give any satisfactory statement on the subject. Perhaps the whole expenditure of such commoners as live on the most economical scale (allowing for travelling expenses), may vary from 200*l.* to 250*l.* a-year; what is spent above the latter sum must be set down to the tastes

and inclinations of the individuals. This does not, of course, include a private tutor's fee, an expense which is seldom incurred except by those who are preparing for honours, and not always by them. The college accounts (technically called battels), which comprehend a slight annual payment to the university, the college fees to tutors, expenses of board, room-rent, coals, candles, and a few other items, vary from 60*l.* to 100*l.* at different colleges, for commoners, and from 30*l.* to 40*l.* more for gentlemen commoners. There are sundry abatements for those on the foundation. The students dine together in the college hall, sitting at separate tables according to their ranks and degrees: their other meals they take in their own rooms.

There is, however, always a considerable number of graduates, of the degree of B.A., in residence at Oxford. Those who intend to enter orders must attend a course of lectures of the divinity professor after their degree. One term of residence, also, is required for a bachelor of arts, before he can proceed to the degree of M.A. There are probationary fellows, of whom residence is required, and others preparing themselves for examination for fellowships: others, again, reside as private tutors. Those on the foundations are, for the most part, accommodated within the colleges: the rest lodge in the town.

Degrees in civil law, and medicine, are merely nominal honours, which, though not conferred on special examination, cannot be obtained until after a bachelor's examination in arts. They are assumed, in general, by such as intend to practise in Doctors' Commons, or as physicians. For degrees in divinity, attendance on divinity lectures is requisite: there are, besides, disputations and exercises enjoined by statute for all the higher degrees, but their performance is little more than nominal.

Few remain at Oxford after the degree of M.A., except such as are concerned with the discipline either of the colleges or of the university, as tutors, professors, &c. But it is usual for most masters of arts, especially for clergymen, to keep their names on the books of their respective colleges, at a slight annual expense. By this means they retain the privilege of voting in the Houses of Congregation and Convocation; and thus it is that questions affecting the government of the university, the election of its representatives in parliament, its officers, &c., are frequently decided by non-resident voters.

The university of Oxford is incorporated by the style of "The Chancellor, Masters, and Scholars of the University of Oxford." Its ancient charters to this effect are confirmed by the Act of Incorporation, passed in the thirteenth year of the reign of Queen Elizabeth. Its statutes, as previously stated, were reduced into a digest in the chancellorship of Archbishop Laud; whose "*Corpus Statutorum*" is still recognised as the governing code of the university, though many of its provisions have been, in effect, abrogated by usage.

The Chancellor of Oxford was elected in ancient times, for three years; but since 1484, for life; and this office, originally held by a resident at the university, has long been little more than an honorary dignity, conferred on some distinguished lay or spiritual lord. But,

although the Chancellor's ordinary powers are delegated to the Vice-Chancellor, he is still the first officer of the university, and is legally invested with its civil jurisdiction.

The High Steward, or Seneschal, is appointed by the Chancellor: his principal office is that of holding the university courts leet. He has a criminal jurisdiction; and he is the proper defender of the privileges of the university. This office may also be performed by deputy.

The Vice-Chancellor is, in effect, the supreme executive and judicial authority in both universities. He is annually nominated, at Oxford, by the Chancellor as his deputy; but, in practice, the office is held in rotation by the heads of colleges for four years.

The proctors (senior and junior) are university officers, appointed annually: they are nominated by the colleges from among their own members, each college taking its annual turn according to a peculiar cycle, fixed by the Caroline statutes of Charles I. They must be masters of arts between the standing of four and ten years. Their duties are of a very miscellaneous character; but they are best known as conservators of the peace of the university; in which office they are assisted by the pro-proctors, and have under their command the academical constabulary force. They have power to repress disorders among the students, to inflict summary academical punishments, such as the imposition of tasks, confinement to college, &c.; and they have also an extensive police jurisdiction in the town. Their summary authority extends both over undergraduates and bachelors of arts, who are still considered by the university as in *statu pupillari*.

The corporate business of the university is transacted by the masters at large in two different assemblies. *Congregation* consists of regents, either *necessary* or *ad placitum*; i. e., chiefly residents at the university. Its business is chiefly of a formal character: confined to the giving degrees and granting dispensations. *Convocation* is the legislative assembly of the university. Members of Convocation are all regents, whether on the foundations, or independent members who retain their names on the books of the colleges (*convictores*). The members of Convocation amounted, in 1846, to 3,068. But the legislative power of this body is limited by two material restrictions. In the first place, any proposition to explain or amend a royal, or Caroline, statute (those enacted by Charles I.) cannot be received without royal permission. In the next place, any proposition to enact any other new statute, or explain an old one, must first be referred to the hebdomadal meeting; which, if it approve the proposition, draws up the terms in which it must be submitted to Convocation; and thus, in fact, takes the initiative in every measure. This body was first instituted in the reign of Charles I., and is composed of the Vice-Chancellor, proctors, and heads of houses.

The Oxford professorships are of two classes; those established by royal foundation, and those of private endowment. It has been already seen, that the professors, as such, have no direct concern with academical education or discipline. Attendance on their lectures is seldom necessary for the attainment either of university rank or college emolument; although, for the purpose of being admitted to holy orders,

it is necessary for bachelors of arts, unless they have a dispensation, to give a brief attendance to the lectures of the *regius* professor of divinity. The lectures of professors, therefore, are only attended by voluntary students. Some lectures are given gratuitously *ex officio*; but there are also courses for which fees are received. Popular lectures on interesting subjects frequently attract considerable audiences; but, in general, public lectures are ill attended; and sometimes those which should be given *ex officio*, are dispensed with, on the score of non-attendance.

The *regii professores*, appointed by the Crown, comprise those of divinity, civil law, medicine, Hebrew, and Greek, founded by Henry VIII.; and those of botany, modern history, anatomy, since founded, or enlarged from private foundations. They are generally well paid, not only out of stipendiary funds, but also by valuable preferments attached to the professorships; *e. g.*, canonries of Christchurch to those of divinity and Hebrew. The private professorships are,—1. Of divinity, the Margaret professorship, founded by the mother of Henry VII., filled by election of all graduates in divinity. 2. In literature and languages; the Camden professorship of ancient history, founded by William Camden, Esq., in 1622: election by Convocation. Poetry, by Henry Birkhead, Esq.: election by Convocation. Anglo-Saxon, by Dr. Rawlinson, in 1750: election by Convocation. Arabic, Laudian professorship, founded by Archbishop Laud: election by officers named in the foundation. Arabic readership, by the Lord Almoner. 3. In common law, the Vinerian professorship, founded by Charles Viner, in 1755, together with common law scholarships: elections by Convocation. 4. in political economy, a professorship founded by Henry Drummond, Esq., in 1825: election by Convocation. 5. The professorships and readerships in the natural sciences are very numerous; but, as these sciences are in no respect introduced into the academical system of education, Oxford has never been in repute as a school of natural philosophy. They are,—The Sedley professorship of natural philosophy (electors appointed by the founder and warden of All Souls); the Savilian professorships of geometry and astronomy (electors appointed by the founder). Lord Lichfield's clinical professorship, and the Aldrichean professorships of medicine and chemistry (founded 1803): election by Convocation. Lee's lectureship in anatomy, and the readerships in experimental philosophy, mineralogy, and geology, appointed by the Crown. 6. Professorship of music, founded by William Heather, in 1626: electors, the proctors. As a general rule, professorships are open to members of all colleges; but it is not usual for Convocation to elect two members of the same college in succession to the same professorship.

The public orator was first appointed in the reign of Elizabeth. He is chosen by Convocation. His duty is, to write letters and addresses on public occasions, to present persons on receiving honorary degrees, and to deliver an annual Latin oration.

The university of Oxford is amply provided with public rewards, for competition among undergraduates and bachelors of arts, mostly through the munificence of private benefactors, both in the shape of annual prizes, and of scholarships, &c. These are open generally to

the whole university, although in some cases, the eligible or preferable candidates are limited by the terms of the endowment. The annual undergraduates' prizes are for Greek, Latin, and English poems: the bachelors' prizes, for Latin and English essays, and also for essays on subjects connected with divinity. There are classical university scholarships of two foundations (Craven and Ireland), mathematical and divinity scholarships, all given by open competition before examiners appointed by the university. Particulars respecting them are given in the University Calendar.

The Commemoration, or Act, is held once every year, on the first Tuesday in July, in the academical building called the theatre. On this occasion honorary degrees are conferred, high officers inaugurated: the public orator recites his annual oration, and the prize essays and poems are read. Honorary degrees, conferred on persons not connected by residence with the university, are usually in civil law.

It would be unpardonable to conclude this account of the principal establishments of the university, without noticing its great libraries, the Bodleian and the Radcliffe. The former derives its name from its munificent benefactor, the famous Sir Thomas Bodley (born 1544, died 1612), who bestowed on the university a large collection of books and manuscripts, brought, at an immense expense, from all parts of the world; and who, also, built a magnificent hall for their reception, and bequeathed large funds for their preservation and future increase. Besides the books that have been purchased and acquired by donations from Laud, Selden, and a host of others, this library has received, for many years past, copies of all works entered at Stationers' Hall; so that it now comprises a very large and most valuable collection. The Radcliffe Library was founded by the posthumous liberality of an opulent physician of the same name (born in 1650, died in 1714). A magnificent circular building for the reception of the books was opened in 1749: the latter principally consist of works on Natural History and Medicine; and of late years none else have been added to the collection.

The famous printing establishment, called the Clarendon Press, from Lord Clarendon, who gave the copyright of his History of the Rebellion to Oxford, was originally established in 1712 in a building erected from the profits of this work. Latterly, however, it has been removed to a more splendid and extensive building. It is under the superintendence of a committee of eleven delegates; and all the books which issue from it are either such as are printed under the command and direction of the delegates, or by private authors, with their express permission.

The income of the university itself is inconsiderable; arising, in part from property, but chiefly from fees paid on degrees, &c. The revenues of the professors and other officers are generally distinct from the public chest of the university, and arise out of royal or private endowment. But the great wealth of Oxford is concentrated in the hands of the colleges; and as these bodies, collectively, form the academical body (all education for university purposes being carried on within their walls, and all students entered on their books), a separate mention of each appears to be a necessary part of an account of the university.

*University College* is ranked in common opinion as the oldest in Oxford, though, perhaps, without any very substantial reason. The era of its foundation is, in fact, unknown; but its oldest statutes bear the date of 1280. The foundation consists of a master, thirteen fellows, sixteen scholars, and exhibitioners. Of the fellowships (which, as well as the scholarships, were given by different benefactors), some are for natives of the county of Durham only; some for those of the dioceses of York, Durham, and Carlisle; others for those of the rest of England, with the exception of these dioceses. Number of resident undergraduates generally fifty or sixty.

*Baliol College* was founded by John de Baliol of Barnard Castle, in Yorkshire, and his lady Dervorgilla, between 1263 and 1268. The foundation, increased by the donations of various benefactors, is for a master, twelve fellows, and fourteen scholars, besides a considerable number of exhibitioners: of the exhibitions 14 are for natives of Scotland, 4 being appropriated to Episcopalians, and 10 to *alumni* of the University of Glasgow. Adam Smith held one of the latter. The fellowships and scholarships, at Baliol (with the exception of two of each, which are confined to persons elected from Tiverton School), are open to the university in general, and are among general prizes, being given away on a *bonâ fide* examination to the best candidates. The master and fellows of this college enjoy a privilege possessed by no other in either university—that of electing their own visitor. Baliol has no gentlemen commoners. The number of commoners in residence is generally from sixty to seventy.

*Merton College* originated in the translation of a foundation by Walter de Merton, Bishop of Rochester, and Chancellor of England, from Malden, to Oxford, in the year 1274. Parts of the buildings belonging to this college, including its treasury or record room, and its library, are regarded as the oldest specimens of collegiate architecture in Oxford. The foundation is for a warden, twenty-four fellows, fourteen *portionistæ* (vulgo postmasters), four scholars, two chaplains, and two clerks. The postmasters correspond, in fact, to the scholars of other colleges. The fellowships are open to natives of all parts of England (not including Wales), with the exception of those of the dioceses of Hereford, Chichester, Exeter, Rochester, Lichfield and Coventry, Chester, and Carlisle. The fellows are elected by favour, and not on comparison of literary merit. The independent members are not numerous, generally from fifteen to twenty commoners. The chapel of Merton is a fine specimen of the English style of the fourteenth and fifteenth centuries.

*Exeter College* was founded in 1314, by Walter de Stapledon, Bishop of Exeter, with the title of Stapledon Hall; and the scholars from Hart Hall were then removed to it. The present foundation consists of a rector and twenty-five fellows, besides numerous scholars and exhibitioners. Some of the fellowships are confined to particular dioceses, others to particular counties, generally in the west of England; but, as far as is consistent with the terms of the foundation, the election to some of them is open to free literary competition. The independent undergraduate members are usually a small number of gentlemen commoners, and from 80 to 100 commoners.

*Oriel College* was founded in 1326, by Edward II., "on the suggestion of his almoner, Adam de Brome." The name is derived from a small house, or messuage, called la Oriole in the old statutes of the house, which stood on the spot afterwards occupied by the foundation. This college has a provost, eighteen fellows, and twenty-four scholars and exhibitioners. Four of the fellowships are for the counties of Somerset, Dorset, Wilts, and Devon: the rest are open to nearly unrestricted competition. They have been long regarded as among the most distinguished prizes which Oxford offers to academic merit, the election taking place on a *bonâ fide* examination. This college has usually from ten to twenty undergraduate gentlemen commoners, and from fifty to seventy commoners in residence.

*Queen's College* was founded by Robert Eggesfield, chaplain to Philippa, queen of Edward III., for the encouragement of students from the north of England. The old foundation consists of a provost and sixteen fellows, two chaplains, eight taberdars (so called from the taberd, or gown, which they formerly wore), twelve probationary scholars, and three clerks. The fellows must be elected from the counties of Cumberland and Westmoreland. There is also a new foundation, consisting of eight fellowships, four scholarships, and several exhibitions, founded chiefly out of estates left for that purpose by John Michel, Esq., of Richmond, in Surrey. These last fellowships are only for the term of eleven years; an unusual limitation in the university. They are open, and candidates elected on free competition. It has also numerous exhibitions. The independent members are numerous: about 100 undergraduates are generally in residence.

*New College* was founded in 1386, by the famous William of Wykeham (already mentioned as the founder of Winchester college), for a warden, seventy fellows and scholars, ten chaplains, &c. The fellows and scholars are chosen by annual election from the college at Winchester, vacancies being filled up as they occur. Those of kindred to the founder are fellows at their first admission, without regard to age: the rest are considered probationers, and termed scholars for two years. Members of this foundation are exempted from the university examinations, proceeding to their degree immediately, by virtue of a certificate from their college. Except a few gentlemen commoners, rarely exceeding six or seven undergraduates, this magnificent institution admits no independent members. It is remarkable, considering the want of stimulus to exertion which is supposed to result from their exclusion from the schools, that many members of New College have been distinguished as *prizemen* for their merit in classical composition. The chapel of New College is usually considered as the finest interior in Oxford, though falling far short of the inimitable chapel of King's at Cambridge. It has, however, been much defaced by modern restorations.

*Lincoln College* was founded in 1427, by Richard Fleming, Bishop of Lincoln. The foundation consists at present of a rector, twelve fellows (limited to the old dioceses of Lincoln and York, except one, which is confined to the diocese of Wells), eight scholars, twelve exhibitioners, and a Bible clerk. This college has generally from thirty to forty undergraduate commoners.

*All Souls College* was founded in 1437, by Henry Chichele, Archbishop of Canterbury; and his foundation remains unaltered. It consists of a warden, forty fellows, two chaplains, and a number of clerks. The election of fellows to this foundation is entirely unrestricted: the qualifications required by statute for a candidate are that he shall be "*benè natus, benè vestitus, et in arte cantandi mediocriter doctus!*" In practice the fellows are elected from the university at large, because of personal interest with the electors, or of birth, connection, and agreeable manners: and, true to their original constitution, it has been for several years the aim of the college to draw to itself the most distinguished candidates who could be found in these respects, without much or any regard to scholastic attainment. This college is the only one in Oxford which subsists entirely as a society of graduates, admitting no independent members, and no students, except the few clerks attached to the establishment. The beautiful towers of All Souls, structures belonging to no particular school of architecture, were raised about the middle of last century.

*Magdalen College* was founded in 1456, by William of Waynflete, Bishop of Winchester and Chancellor of England. The foundation consists of a president, forty fellows, thirty scholars (called *demies*), and several inferior members. The fellows are variously limited to different dioceses and counties: the demies may be elected from any part of England from which any fellows are eligible, with the exception of the dioceses of York and Durham. This is one of the wealthiest collegiate foundations in England; but its elections are so restricted by statutes, that it is also one of the closest. The only independent under graduates are a few gentlemen commoners. Much of the architecture of Magdalen College is well worthy of notice; but its chief title to admiration is the elegant tower, said to have been designed by Wolsey, which forms so prominent an object to those who enter Oxford from the east; it was raised in the reign of Henry VIII.

*The King's Hall and College of Brazen Nose* was founded in 1509, by William Smith, Bishop of Lincoln, and Sir Richard Sutton of Prestbury, in Cheshire. Its name is derived merely (it is supposed) from the brazen nose which decorated, by way of knocker, the door of the old hall on the site of which it was founded. This college has received many benefactions since its first establishment. It has, at present, a principal, twenty fellows, thirty-two scholars, and several exhibitions. Both fellowships and scholarships are, for the most part, confined to natives of particular localities, with preference, in some instances, to the kindred of the various founders. This college usually holds in residence a small number of gentlemen commoners, and about 100 commoners.

*Corpus Christi College* was founded in the year 1516, by Richard Fox, Bishop of Winchester, for a president, twenty fellows, twenty scholars, and two chaplains. The fellows are elected from among the scholars, the latter being confined to various dioceses and counties. The undergraduate members not on the foundation are only six or eight gentlemen commoners.

*Christ Church* was originally founded by Cardinal Wolsey, and

subsisted four years under his patronage; but at the period of his disgrace the foundation was still incomplete. Henry VIII. first suspended, and finally re-established, it; and, in 1545, the episcopal see having been at the same time fixed at Oxford, this institution was placed on the double footing of a college and a cathedral. The foundation then consisted of a dean, eight canons, eight chaplains, &c., together with sixty students; to whom forty more were afterwards added by Queen Elizabeth, and one by a subsequent benefactor (William Thurston). The canons of Christ Church have houses provided for them within the college: they may marry, and are on the same footing with the canons of other cathedral churches. One canonry is permanently attached to the office of divinity professor: another to that of Hebrew professor. Of the students, sixty-one are nominated by the canons, these nominations being a matter of private patronage: they answer both to the scholars and fellows of other colleges, being elected as undergraduates, and retaining their studentships until death or promotion. Queen Elizabeth's forty are elected from Westminster college.

This noble foundation, the first in Oxford, and, in some respects, the first in England (Trinity College, Cambridge, being its only rival), gives also instruction to a great number of members not on the foundation. It has been, in fact, for many years, the favourite place of education for noblemen, and for young commoners of rank and wealth. The number of noblemen varies according to accident, but usually comprises all those who attend the university. The undergraduate gentlemen commoners in residence generally vary from thirty to sixty: the commoners average ninety or a hundred. The buildings of Christ Church form a magnificent whole; but in detail, with the exception of the fine hall, they do not equal parts of some other colleges in architectural beauty. The old church of St. Fridiswida, now serving the double purpose of cathedral and college chapel, is a Norman building of high antiquity.

*Trinity College* was originally founded under the patronage of the priors and bishops of Durham; but that foundation having been suppressed at the Reformation, a college was established on its site by Sir Thomas Pope, in 1554, for a president, twelve fellows, and twelve scholars; to which a scholarship and three exhibitions have since been added. The scholarships are open, and given by free competition. The fellows are elected either from actual or superannuated scholars, with no restriction, except that there cannot be more than two of the same county (with the exception of Oxfordshire, which may have five at the same time). There are several exhibitions: and a few undergraduate gentlemen commoners, and fifty or sixty commoners.

*St. John's College* was founded in 1555, by Sir Thomas White, alderman and merchant tailor. It consists of a president, fifty fellows and scholars, &c. Of the fellowships, six are for founders' kindred; seven appropriated to particular endowed schools; the rest to Merchant Tailors' school. The founders' kin are fellows on admission; the rest scholars (or probationary fellows) for three years. There are generally from thirty to forty undergraduate commoners in residence.

*Jesus College* was founded by Queen Elizabeth, in 1571, on the

benefaction of Hugh Price, treasurer of St. David's. It has received additional benefactions; and now consists of a principal, nineteen fellows, eighteen scholars, &c., mostly natives of Wales. The independent members, of whom there are generally fifty or sixty undergraduates, are, for the most part, from the same part of the island.

*Wadham College* was founded in 1613, by Nicholas Wadham of Merifield, in Somersetshire, and Dorothy, his wife, for a warden, fifteen fellows, fifteen scholars, &c. The fellows are superannuated after eighteen years. They are elected from the scholars: of these the greater part are admitted on open competition: a few restricted to particular counties. Resident undergraduates about fifty.

*Pembroke College* was founded in 1624, by the endowment of the ancient Broadgate Hall, by Thomas Tesdale, Esq., and the Rev. Richard Wightwick, having obtained its name from Philip, Earl of Pembroke, then Chancellor of the University. At present the foundation consists of a master, eighteen fellows, and sixteen scholars. The fellowships, and most of the scholarships, are variously limited to schools, districts, and founders' kin. There are from forty to fifty independent undergraduates in residence.

*Worcester College* was founded by the endowment of Gloucester, or St. John the Baptist's Hall, a very ancient institution, in 1714, by Sir Thomas Cookes, of Bentley, in Worcestershire. The foundation, which has since received sundry augmentations, consists at present of a provost, twenty-one fellows, sixteen scholars, and three exhibitioners. The fellowships and scholarships are founded by various benefactions; and the fellows all elected from the scholars of their various foundations. Some of the scholarships are open. There are of independent undergraduates usually from ten to twenty gentlemen commoners (called in this college fellow-commoners) and about sixty commoners.

*Halls.*—The five surviving halls of Oxford are unincorporated foundations; so that whatever estates or other property they possess are held in trust for them by the university. The members of halls enjoy the same privileges as those of colleges. The principals receive annual rents from the students inhabiting the halls, who are independent members. The chancellor of the university appoints the heads of halls (with the exception of St. Edmund's Hall, to which the provost and fellows of Queen's appoint). The tutorial department, in such of these halls as still serve the purpose of education, is in the hands of the principal and vice-principal. St. Mary's Hall, belonging to Oriel College, has from twenty to thirty undergraduates (gentlemen commoners and commoners); Magdalen Hall (to Magdalen College), ninety; St. Alban's Hall (to Merton), twenty; St. Edmund's Hall (to Queen's), forty; Newtown Hall (to New College), a few. Students frequently come to these halls more advanced in years than is usual among those who commence their academical course in colleges; and the rules of residence are not, in some of them, as strictly enforced as elsewhere.

The number of names on the books of the colleges and halls, at Oxford, in January 1846, amounted to 5,873, of which 3,068 were members of Convocation (*i. e.* all regent masters, and upwards) leaving a surplus of 2,805. How many of the latter were undergraduates in residence

is not easily ascertained; but, in all probability, the number does not fall short of 1,500. There were, during 1845, 438 matriculations.

*Cambridge.*—The organisation of the collegiate bodies, and their rules of government, at Cambridge, vary from those of Oxford only in a few unessential particulars. The three ranks of independent undergraduates, in the former university, are noblemen, fellow-commoners (so called originally from having their commons, or college dinner, at the same table with the fellows), and pensioners. With respect to the discipline and government of those *in statu pupillari*, it is to be observed, that students at Cambridge do not subscribe to the thirty-nine articles, either at matriculation or afterwards; although, on taking their degree of B.A., they are obliged to sign a declaration of adherence to the Church of England. Lodging in college is not enforced on undergraduates, if there be not room within the walls of the building for their accommodation. It is chiefly to this circumstance that the great increase of students at Cambridge, of late years, is to be attributed; the members of the other university being necessarily limited by the amount of room for lodging them. With regard to members on the foundation, the scholars of most colleges at Cambridge, being generally elected by free competition from among the undergraduate members, form rather a distinguished class among the students than a body distinct from the independent members, and chosen without free competition, as is generally the case at Oxford. A distinction exists between two different classes of fellowships in most houses at Cambridge, which is only partially known at Oxford; viz., between the foundation fellowships, and what are termed the bye-fellowships and appropriated fellowships: the former being part of the original endowments, and generally open to all parties; the latter, founded by subsequent donations, and frequently limited by local or other restrictions. In most colleges, the governing body is composed of the foundation fellows only; and they alone are eligible to college offices. It has been already stated, that the general usage, at Cambridge, is for each college to elect its fellows from among its own members, whether scholars or independent: the chief exceptions to this rule occur in the small colleges, when they are in want of some individual to fill the office of tutor, and no satisfactory candidate presents himself in their own number.

In general, it may be said, that the Cambridge system is less strict in point of external discipline, and the undergraduates under rather less close control, than at the sister university; on the other hand, that emulation and close attention to study are more favoured and encouraged. All the regulations, both of the colleges and university, tend in this direction. Open competition, and rank according to merit, form the cardinal principles of the academical constitution, as far as it relates to students.

The system of public examinations pursued at Cambridge is, in many respects, different from that which subsists at Oxford: its details will serve to show what is the character of the instruction, and academical discipline, of the university: the public examinations being intended to call forth and exhibit the results of that instruction.

The peculiar characteristic of Cambridge is, and has been for nearly

two centuries, the pursuit of the mathematical studies, and of those branches of natural philosophy which depend upon them. It is, probably, in consequence of the general attention to these studies, that physical science, in all departments, has been more cultivated in this than in the sister university; but the proficiency of Cambridge men, in many departments not immediately connected with mathematics, can only be regarded as an indirect result of the cultivation of the latter; to which, and its cognate sciences, the chief machinery of the place, the lectures both public and private, the honours and emoluments both of the university and the colleges, have hitherto been chiefly devoted. Classical study, though now elaborately carried on, is comparatively of recent introduction.

The academical year at Cambridge commences with Michaelmas Term, when the several courses of lectures, &c., begin. At the end of each of the two first years college examinations are held, when the men of each year, as they are termed (*i. e.* all who have commenced residence at the same Michaelmas), are classed in order of merit. These examinations, in colleges of so great extent as Trinity and St. John's, almost partake of the nature of university competition.

The first university (or "previous") examination for the degree of B.A., takes place in the Lent Term of the second year from that in which the student commences residence. This "little-go" is of recent introduction (1829). The subjects of examination are the elements of divinity (including the Evidences of Christianity of Paley, the favourite text author of Cambridge), and one Greek and one Latin author. After this examination, the candidates are merely arranged, alphabetically, in two classes; those who have passed with credit, and those who have passed simply. Rejected candidates must attend the next year's examination.

The "previous examination" is followed by the "exercises," performed only by those who aspire to honours. These relics of old scholastic fashion consist of Latin theses (generally on subjects of moral philosophy), which are propounded by the student who is candidate for the degree of B.A. (the respondent), and answered by others, styled "opponents," in syllogistic form, in Latin, under the superintendence of the moderator. These exercises take place during the year preceding that in which the respondent intends to pass as B.A.

The practice of "degrading," or postponing for a year the degree of B.A., which had become common among students, gave rise to a recent statute, by which degraders are not allowed to present themselves as candidates for honours except by special permission.

The senate-house examination for the degree of B.A. takes place every Lent Term; so that (contrary to the Oxford practice) all the men of the same year, except such as have degraded, enter into competition at the same time.

The questionists, or candidates, consist of those who are and who are not candidates for honours. Each class is examined separately. The examination of the latter lasts six days: it is entirely conducted on paper; and the subjects, or questions, and exercises proposed are the same for all. They are in Euclid's Elements, arithmetic, and algebra, with some in the elementary parts of natural history; Homer and

Virgil, including questions in grammar, history, and geography; Paley's Evidences and Natural Philosophy; and Locke.

The examination of the candidates for honours (mathematical tripos) is confined to the mathematical and cognate sciences; with the addition of questions in divinity, logic, and moral philosophy; which, however, are regarded as subsidiary to the great purpose of the examination. It lasts seven days; the first six being entirely devoted to mathematics. Each day is of five hours and a half. On the first day, the examination extends to "such parts of pure mathematics and natural philosophy as do not require the methods of the differential calculus;" and, during the successive days, it gradually rises in difficulty. On the seventh day, the candidates are examined in logic, moral philosophy, and divinity. After the close of the examination the candidates most distinguished (thirty at least) are arranged in order of merit; being divided into the classes of wranglers, and senior and junior optimes; the highest of all being senior wrangler for the year: the greatest of English academical honours. The others, that is, in Cambridge idiom, the *οἱ πολλοί*, or many, are also arranged according to merit. Those candidates between whom the examiners do not assign a difference of merit are *bracketed* as equals.

Down to a recent period the candidates for honours were divided into four classes, to whom different questions were usually proposed. But owing to the difficulty of fairly determining upon the comparative merits of those who had been subjected to different examinations, this plan, after undergoing various modifications, was wholly abandoned in 1838, since which time the same questions have been proposed to all candidates.

*Smith's Prizes* are two annual prizes for commencing Bachelors of arts in mathematics and natural philosophy. They are made the subjects of open competition shortly after the period of the mathematical tripos. Hence the adjudication of these prizes is, in some sort, the decree of a court of appeal, in which, sometimes, that of the examiners is reversed, and the second, or even a lower, wrangler becomes first prizeman.

The classical tripos, or examination, follows some weeks after the mathematical. It is a voluntary competition, to which those only who have obtained mathematical honours are admitted. It lasts five days; and the candidates are arranged, in order of merit, in three classes. The Chancellor's medals are annually given to two commencing bachelors of arts, senior optimes at the lowest, for classical merit. These, therefore, like the Smith's prizes, form separate subjects of competition: but it very often happens that the same individual has stood at the head of the classical tripos, and has also obtained the first Chancellor's medal.

The characteristic of classical study, at Cambridge, is a minute attention to the critical peculiarities of the Greek and Latin languages. This is carried to a greater extent than at Oxford; and the system of examination is framed with a view to produce and elicit as much of this knowledge as possible. Thus the "questions," or select portions of ancient authors, given to candidates for the tripos for translation and elucidation, are usually selected either from their

difficulty and grammatical or rhetorical peculiarities, or from their lying out of the line of ordinary reading, so that the student in explaining them, may be thrown as far as possible on his own resources. Such a mode of examination would appear to imply an extensive course of study on the part of the candidates. But that study, speaking generally, though critical, is not comprehensive. Familiarity with a few authors of the better age supersedes a general acquaintance with the remains of classical antiquity. It seems as if the University of Cambridge had borrowed from its own mathematical discipline the habit of binding down the mind to exercise itself thoroughly in a narrow range of topics, during the short space of the three academical years which pass before the degree.

Original composition forms no part of the tripos examination ; but it is, on the other hand, a chief feature in the competition for the university scholarships. There are also annual prizes, as at Oxford, for several species of classical composition. It is in these exercises that the result, both of the previous knowledge and facility acquired at public schools, and of the critical acumen attained at Cambridge, is evinced in the most brilliant, if not the most satisfactory, manner.

The present statutes of the University of Cambridge were granted by Queen Elizabeth. The senate, or legislative body of the university, consists of two houses, the regents and non-regents. But every grace (*i. e.* proposition submitted to the senate) must have the previous approbation of the council, called the caput ; which consists of the vice-chancellor, a doctor in each of the three faculties, and two masters of arts, who in practice are all five nominated by him.

The principal officers of the University of Cambridge have nearly the same titles and offices with those of Oxford ; namely, the chancellor, high steward, vice chancellor, public orator (who is, as it were, the secretary of the senate, writing, reading, and recording letters to and from it, and presenting to honorary degrees), and the two proctors. There are also two officers peculiar to Cambridge, styled moderators, who are deputies of the proctors, and whose office it is to superintend the public exercises and examinations.

The principal professors are, the regius professors of divinity, civil law, physic, Hebrew and Greek, appointed by Henry VIII. ; the Margaret professor of divinity, whose chair was founded by the mother of Henry VII., Margaret Countess of Richmond ; the regius professor of modern history, appointed by George I. in 1724. Besides these, there are two professorships of Arabic (one founded by Sir Thomas Adams, in 1632 ; and the other styled the Lord Almoner's professorship) ; the Lucasian professorship of mathematics ; professorships of casuistry, music, chemistry, astronomy and experimental philosophy, anatomy, botany, geology, astronomy and geometry, natural and experimental philosophy, English law, medicine, mineralogy, political economy ; and a third professorship of divinity, founded by John Norris, Esq., in 1768. As at Oxford, the appointment to some of these is vested in the senate, to others in the Crown, and to others in special bodies of electors.

The professors, with the exception of those of civil law and medicine, are not directly concerned in the public education of the uni-

versity : although their lectures are, in general, better frequented than those delivered in Oxford. The following table exhibits the principal rules respecting the time required for proceeding to degrees at Cambridge. It will be observed that the year, at this university, for the purpose of residence, consists only of three terms ; residence in Trinity Term not being required.

Degree of *B.A.*, after twelve terms, of which ten in residence.

*M.A.*, bachelors of arts of three years' standing.

*Bachelor of Divinity*, A.M. of seven years' standing ; but, by a peculiar usage, persons are allowed to proceed to this degree at the end of ten years without having taken any other ; styled ten-year-men.

*D.D.*, B.D. of five years', or A.M. of twelve years', standing.

*Bachelor of Civil Law* must be of six years' standing complete, and have resided nine terms : a B.A. of four years' standing is also admissible to this degree.

*Doctor of Civil Law*, five years from degree of B.C.L., or seven from that of M.A.

*Bachelor in Physic* may be admitted after five years' standing, and nine terms' residence.

*Doctor in Physic*, same as Doctor in civil law.

*Licentiate in Physic*, M.A. or M.B. of two years.

*Bachelor in Music*, required to enter his name at a college, and perform an exercise in his art.

*Doctor in Music*, generally a bachelor in music.

The following are the collegiate establishments of Cambridge, in order of foundation. It will be observed, that the name *Hall* is not given, as at Oxford, to houses without endowment : it is, in fact, used indiscriminately with *College*. The fellowships and scholarships are unlimited, or nearly unlimited, as to the birthplace or place of education of candidates, unless where otherwise specified.

*St. Peter's College* (commonly called Peter House), founded in 1257, by Hugh de Balsham, Bishop of Ely. The present foundation has sixteen fellows, ten by-fellows, and sixty-two scholars. One-fourth of the foundation fellows must be in orders ; the by-fellows are not entitled to offices in the college, or to a vote in its affairs.

*Clare Hall*, founded in 1326, by Dr. Richard Badew, as University Hall ; afterwards reconstituted by Elizabeth de Burgh, sister of Gilbert Earl of Clare. The society consists of a master, twenty-two fellows, and thirty-four scholars.

*Pembroke College*, founded in 1347, by Mary Countess of Pembroke, has a master, sixteen fellows, thirty scholars, with numerous exhibitioners.

*Gonville and Caius College* was founded, as Gonville Hall, in 1347, by Edmond Gonville. John Caius, the celebrated physician, consolidated this foundation with a new one of his own in 1558. There are twenty-nine fellowships, of which twenty-one are open, the rest limited : two of the fellows must be physicians. There are also forty-two scholarships, four valuable studentships in physic, and eighteen exhibitions. This college is the only one in either university, although both confer degrees in medicine, which has served, in reality, as a nursery for physicians.

*Trinity Hall* was founded in 1350, by William Bateman, Bishop of Norwich. It has twelve fellowships, usually held by graduates in the civil law, to the study of which this college is more peculiarly appropriated. It has also fifteen scholarships.

*Corpus Christi College* (also called Benedict, or Bene't) was founded in 1351, by the brethren of two guilds, or corporate societies, in Cambridge. It has twelve fellowships, of which two are appropriated to Norwich school, and two to natives of Norfolk; and numerous scholarships and exhibitions. The buildings of this college (commenced in 1823) are among the most elegant specimens of modern Gothic in either university.

*King's College* was founded in 1441, by Henry VI., by whom it was connected with his foundation of Eton College. The society consists of a provost and seventy fellows and scholars, elected from the seventy scholars of Eton, by seniority, according to the system detailed under the head of Eton. They become fellows at the expiration of three years from their admission. By special composition with the university, the members of this house (like those of New College, Oxford) are exempt from the university examinations and exercises, and from the authority of the university officers within their own walls. The buildings of King's College are of several dates. The magnificent chapel was begun by Henry VI.: its construction was continued under several reigns; and it was completed, with money bequeathed by Henry VII., in 1515. The grand court adjoining to the chapel has been recently erected in a very sumptuous style; but, although the details of its architecture are mainly taken from those of the chapel, the general effect is strikingly dissimilar.

*Queen's College* was founded by Margaret of Anjou, in 1446. It has nineteen foundation fellowships, limited in a peculiar manner, one by-fellowship, and numerous scholarships. Its head is styled president.

*Catherine Hall* was founded in 1473, by Robert Woodlark, provost of King's. It has fourteen fellowships, of which six are on the foundation; and forty-three scholarships.

*Jesus College* was founded in 1496, by John Alcock, Bishop of Ely. There are sixteen foundation fellowships, open, by a recent statute, to all Her Majesty's subjects. The master and fellows nominate two candidates on a vacancy, of whom the Bishop of Ely (the visitor) appoints one. There are, also, three fellowships of recent foundation; and forty-six scholarships and exhibitions.

*Christ's College* was founded in 1451, by King Henry VI.; additionally endowed by Margaret Countess of Richmond and Derby, in 1505. There are thirteen clerical and two lay fellowships, partially limited; and more than ninety scholarships and exhibitions.

*St. John's College* was founded in 1511, by the executors of Margaret Countess of Richmond and Derby, the munificent benefactress of Christ's College. It has thirty-two foundation fellowships, thrown open, by royal letters patent, to all natives of England and Wales; and twenty-one appropriated fellowships of different foundations. The electors are the master and eight senior resident fellows. There are 114 scholarships. This college has been distinguished, for a lengthened

period, for the high mathematical qualifications required from its fellows; and, in this respect, a rivalry, renewed at every university examination, subsists between it and Trinity: but the latter has, of late years, been superior in the classical attainments of its members. The buildings of St. John's have been increased by a large quadrangle on the left bank of the Cam; forming one of the finest collegiate edifices in England.

*Magdalen College*, begun in 1519, by Edward Stafford Duke of Buckingham, and completed in 1542, by Lord Chancellor Audley, has four foundation and thirteen by-fellowships, with forty-three scholarships.

*Trinity College*.—This magnificent establishment was founded by Henry VIII., in 1546, on ground which had been occupied by several suppressed colleges and hostels. It has a master and sixty fellows, elected from the scholars, graduates below the degree of M.A.; sixty-nine scholars; and numerous exhibitioners. The fellows (except two) must go into orders on the expiration of seven years from the degree of M.A. The government of the college is vested in the master, who is appointed by the crown, and eight senior fellows. Trinity has acquired the highest distinction among the colleges at Cambridge for the number, rank, and fortune, of its independent members; and, also, for its high character as a place of education. The acquisition of a fellowship at Trinity may be considered as the first collegiate honour in England, from the select character of the competitors; the scholars being themselves chosen for merit out of the great body of the undergraduates of the college; whilst, out of this distinguished class, a further choice is made on the election of a fellow. The buildings of Trinity are the most extensive belonging to any single college in either university, as the number of its resident undergraduates is by far the greatest. The great quadrangle is the largest at Cambridge, and larger than any at Oxford. Neville's Court is remarkable for the elegant collegiate style of its architecture.

*Emanuel College* was founded, in 1584, by Sir Walter Mildmay, Chancellor of the Exchequer in the reign of Elizabeth. It was regarded, in the early times of its foundation, as a seminary of puritan opinions. There are twelve original foundation fellowships, and three subsequently added, with numerous scholarships and exhibitions.

*Sidney Sussex College* was founded in 1598, pursuant to the will of Frances Sidney Countess of Sussex. There are nine foundation fellowships, and three appropriated; twenty foundation scholarships, open to all individuals; and two for scholars from Tiverton school; and sixteen exhibitions.

*Downing College* was founded in pursuance of the will of Sir George Downing, dated 1717; but the college was not incorporated until 1800. When complete, the society will consist of a master, professors of law and medicine, sixteen fellows (of whom two clerical), and six scholars. All graduates of Oxford and Cambridge are eligible to fellowships. The lay fellowships are tenable only for twelve years.

The number of members on the books at Cambridge, in 1846, was 6,487: of these 3,451 were members of the senate, the remainder

being 3,036. In 1835 the numbers at Oxford and Cambridge were nearly equal ; but at present Cambridge has 614 members on its books more than Oxford. This, we have seen, has been occasioned partly by the accommodation for students not being restricted to the college buildings, as in the sister university ; but it has partly, also, been owing to other causes. Cambridge has much more than doubled the number of its students since the commencement of the century. Trinity alone has 495 under-graduates, and St. John's 355. We may remark, before dismissing this part of our subject, that a work on English university education, which should describe the changes it has undergone, and its present state, and which should, at the same time, carefully estimate and exhibit its peculiar merits and defects, is a desideratum which, perhaps, is not destined to be very speedily supplied. Dr. Whewell's two treatises on University Education are the best of the existing publications on the subject. They, however, refer more especially to Cambridge ; and, though able, discover quite as much of the spirit of a partisan as of that of a philosopher.

It only remains to notice the establishments for the higher branches of education which have arisen of late years in the metropolis, Durham, &c., to which the character of universities can hardly be said, in strictness, to belong, inasmuch as the power of granting degrees has not been conceded to them.

*University College* (formerly *London University*) was founded by a company of shareholders, with a view partly to pecuniary advantage, and partly to supply general education, combining a more extensive range of subjects than those in which instruction is given at Oxford and Cambridge, to persons of every class of religious opinion. It was opened in October, 1828. It was modelled on the plan of the universities of Scotland and Germany ; not being intended to enforce any system of academical residence or discipline ; but merely to furnish education by means of public lectures by professors, dependent on fees from their pupils ; to institute examinations and prizes for the benefit of such as attended these lectures, &c.

The government of the college is vested in a council, elected by the proprietors, which has power to make regulations, accept endowments, appoint officers, professors, tutors, &c. Instruction is provided in the three faculties of arts, medicine, and law. There are thirty-two professorships, viz. : nine in literature, six in mathematical and physical sciences, three in ethical and political sciences, three in law, eleven in medicine ; but some of these are vacant, and some held with other professorships. It has certain scholarships, founded by private endowment. The session of the university commences on the 1st of October for the medical classes, and on the 1st of November for the others. The manner of instruction in the Latin and Greek classes, and those of modern languages, &c., is, in general, catechetical, by daily examination in passages previously studied by the scholar ; and by written exercises. In the classes attended by junior students there are frequent examinations ; and two regular examinations, on the Cambridge plan, in the course of the year.

Hitherto, this institution has had but little success ; the only portions of it which have answered the expectations of the founders, by

furnishing regular collegiate courses of instruction, being the medical, mathematical, and classical departments. The remaining classes, such as those of law, natural science, philosophy, &c., have remained only partially connected with the establishment; being thinly attended, and, in many instances, more numerous by independent auditors, not going through a regular course of education, than by those belonging to the latter class.

Connected with the college is a preparatory school, which is pretty well attended; a library, museum of anatomy, and an hospital.

*King's College*, London, is situated on ground presented to the foundation by George IV., forming the east wing of Somerset House. The funds for the erection and support of the institution were raised partly by donations and partly by shares. The government is vested in a council consisting of three classes; the visitor (the Archbishop of Canterbury), the perpetual governors by virtue of offices (viz., the Lord Chancellor, Archbishop of York, Bishop of London, and several other high functionaries), the governors for life, and the councillors simply. The establishment is divided into two parts, junior and senior. The junior department consists of the *King's College* preparatory school: connected with the establishment are various schools in different parts of the country. The senior department is divided into the general school, with sixteen professors in various branches; and the medical school, with nine. The chief difference between the two establishments consists in the fact of there being a divinity professor attached to *King's College*, which is instituted professedly, although not exclusively, for the instruction of youth according to the tenets of the Church of England.

*University of London*. Various negotiations had been entered into, at different times, between the government and the councils of *University College* and *King's College*, relative to the conferring of degrees by the latter. These, however, proved unsuccessful; but, in order to obviate the inconvenience arising from the want of an establishment with power to confer degrees in the metropolis, government established, by charter, dated the 28th of November, 1836, the *London University*. This consists of a senate, who appoint individuals in the various departments of literature and science, whose duty it is to examine all candidates for degrees educated at *University College*, *King's College*, and such other institutions as Her Majesty in Council may from time to time choose to specify. On the formation of this new metropolitan university, *University College* relinquished its former title, which had been from the first a misnomer, and received a charter of incorporation by the name which it now bears.

We are inclined to regard the establishment of the *University of London* as a very considerable improvement. The entrusting of the examination of candidates for degrees to gentlemen nowise connected with their education, goes far to obviate all chance of improper individuals being graduated because they happen to be educated at certain places, or by certain parties; and is, in this way, of material advantage. It is difficult, however, to see any good reason why those individuals only, who have been educated at certain specified establishments,

should be entitled to appear before the examiners. Provided a person have the necessary information, it is of no importance to the public how he came by it. Make sure, by a searching examination, that candidates are entitled to the distinctions to which they lay claim; but, having done this, it is mere impertinence to inquire how or where they were educated.

The *University of Durham* has been recently founded, chiefly by private endowment from the bishop and wealthy prebendaries of the diocese. The establishment consists of a warden, professors, tutors, readers, and lecturers; its professed object is, the furnishing instruction to students in the north of England, with a view to holy orders.

The same object is sought to be accomplished, on behalf of the poorer class of students in Wales, by the establishment of the College of St. David's at Lampeter.

*Mechanics' Institutes.*—Exclusive of the instruction at the above-mentioned schools and colleges, considerable exertions have been made within these few years to diffuse instruction among tradesmen, mechanics, &c., in large towns, by the establishment of what have been called Mechanics' Institutes. These are supported partly by contributions, and partly by the subscriptions of the members. Short courses of lectures, illustrated with experiments, are given on the most popular branches of natural philosophy, and occasionally on departments of literature, moral philosophy, political economy, &c. Reading rooms are attached to the greater number of these institutions, which, speaking generally, are well attended. On the whole, we believe these establishments have been productive of considerable advantage. The instruction they supply is, no doubt, very flimsy and superficial. But it notwithstanding serves to expand and inform the minds of the auditors; and is perhaps the most suitable to them. An improvement in the system of school education, by qualifying the members of Mechanics' Institutes the better to appreciate accurate scientific discussions, would be the most likely means by which to improve the lectures given at the institutions in question.

## SECT. 2. *Education in Scotland.*

*Early History of Literature and Education.*—Scotland, in ancient times, was barbarous in the extreme, being destitute alike of any tincture of education and of literature. It is doubtful whether druidism ever extended so far north; and as Scotland was but imperfectly subjugated by the Romans, who speedily withdrew from it, and who do not appear to have founded any colonies to the north of the Tyne, the probability seems to be that she continued in nearly primæval barbarism till the introduction of Christianity, to which she owed the first rudiments of civilization and of learning. The date of this event is not well ascertained; but the more probable opinion seems to be that it was introduced by St. Columba, a native of Ireland, in the 6th century,\* when the king and his principal nobles are said to have been

\* St. Ninian is said, by some authorities, to have introduced Christianity more than a century before Columba; but no dependence can be placed on the accounts of the former, and but little on those of the latter.

baptized. The saint is reported to have fixed his residence in the small island of Iona, or Icolmkill, on the west coast of Scotland, where the foundations were early laid of that famous monastery or school, whence, to borrow the words of Dr. Johnson, "roving clans and savage barbarians derived the benefits of knowledge and the blessings of religion." But in these rude and unsettled times, the seats of learning and philosophy were not exempted from attack; and after a career of about three centuries, Iona is said to have been rased to the ground by Danish and Norwegian invaders, and its inmates massacred. It recovered, however, from this shock, and new buildings were erected, of which the remains even at this day are pretty extensive; but it never regained its original ascendancy. Numerous monasteries were established in the 12th century; and with them, and under the same roof, were connected seminaries of education, which continued to be, for two or three centuries, the only schools in the kingdom. What literature and science prevailed were confined to the monks, and to those, whether laymen or clergymen, who availed themselves of the instruction which monastic establishments afforded. It was then a common practice among the barons and higher gentry to board their children with the monks that they might be educated by the latter—(*Chalmers's Caledonia*, i. 768, and the learned *Dissertation* prefixed by Dr. Irving to his *Lives of the Scottish Poets*.)

*Foreign Universities.*—It cannot be said that literature attained to any great eminence under the auspices of the monasteries. The character, too, of these institutions gradually deteriorated; licentiousness and ignorance usurped the place of religion and knowledge; and the interests of education suffered accordingly. In the mean time, Scotland produced many distinguished scholars and authors; but most of them owed their principal acquirements to foreign instructors. So little, indeed, was native science esteemed, that, in 1282, Dervorgilla, daughter of Allan Lord of Galloway, and wife of John Baliol, founded and endowed a college at Oxford for the reception of Scotch students; and, in 1326, a college was founded and endowed at Paris by the bishop of Moray, for a similar purpose. Scotch students also resorted to Salamanca, and other seminaries on the continent. The students of the university of Cambridge were, in 1270, classed by nations; and five English, three Scotch, three Irish, and two Welsh collegians, were invested with a kind of rectorial power, for the maintenance of order among their respective countrymen.—(*Irving's Dissertation*.—*M<sup>r</sup> Crie's Life of Knox*, vol. i.)

*Scotch Universities.*—St. Andrews, the oldest of the Scotch universities, was founded by papal authority in 1413; that of Glasgow, by the same authority, in 1450; that of Aberdeen, also with the sanction of the pope, in 1494, though education did not commence in it till 1500; and that of Edinburgh, the only one established since the Reformation, in 1582. The university of St. Andrew's consisted, at one time, of three colleges, instituted at different periods, St. Salvador's, St. Leonard's, and St. Mary's; but, in 1748, the first two were united, and the buildings of St. Leonard's were alienated and converted into dwelling-houses. The university of Aberdeen consists of two colleges: King's, founded as now stated, in 1494; and Marischal College, founded

and endowed by George Keith, Earl Marischal, in 1593. The universities of Glasgow and Edinburgh contain one college each. None of these colleges or universities can be said to be liberally endowed; and, with the exceptions afterwards to be mentioned, none of them owe any considerable endowment to the Crown. They all originated in the piety or love of learning of individuals, or of public bodies, not in the public spirit of the legislature. In early times the Romish church devoted some means to that purpose; the town council of Edinburgh has expended, from time to time, considerable funds on the university of that city, and a large number of private individuals, at an early period of the history of these seminaries, bequeathed sums for extending the buildings, for the endowment of some particular professorship, or for the general benefit of learning within their walls. St. Andrew's has pretty ample endowments, arising from the original foundation, from lands either given to the university, or purchased by its own accumulated funds, from teinds (tithes), royal grants, the donations of private individuals, &c., insomuch that, taking one class with another, the endowment of each professor averages about 230*l.* a year. The two colleges of Aberdeen possess funds of a nearly equal amount, derived from similar sources. The university of Glasgow is somewhat more richly endowed, there being, at an average, a salary of about 300*l.* a year attached to each chair, exclusive of five *regius* professorships founded by the Crown, the aggregate endowment of which is 400*l.* Edinburgh university is comparatively ill-endowed. Twenty-four professors, including the principal, receive, at an average, about 120*l.* a year each; but while several receive considerably more than this sum, others receive proportionally less. The professors of Pathology, Chemistry, Materia Medica, Theory of Physic, Practice of Physic, Midwifery, and Clinical Medicine, receive no fixed salaries. A professorship of music has recently (1839) been established in consequence of a bequest to that effect by the late General Reid, with an annual salary of 300*l.* In Glasgow College, two professorships have recently been founded and endowed by the Crown; that of Forensic Medicine in 1839, and that of Civil Engineering in 1840. The principals of the different colleges receive no fees; but the professors, in addition to the endowment attached to some of their chairs, receive the fees of their respective classes, varying from 2*l.* 2*s.* to 4*l.* 4*s.* each student; and on these they, in fact, in most cases, mainly depend. The town council of Edinburgh, who from the first were the patrons of the university of that city, and the Crown, are the only parties authorized to found new professorships in it. If a private party wish to found a chair, either by bequest or otherwise, he must procure the sanction of the town council, which, however, has not hitherto been refused. The first *regius* professorship in Scotland, that is, the first professorship founded and endowed by the Crown, was that of Church History in the university of Edinburgh, in 1695: at present (1846) that university has ten such professorships, six of which enjoy an endowment of 100*l.* a year each: three have more than that sum; and one is unendowed. There are *regius* professorships in the other universities. (*Report of the Royal Com-*

*mission of Inquiry into the State of the Universities of Scotland, 1831.)*

**Bursaries.**—Bursaries are endowments for the support of students attending college. Of these some are enjoyed only for a single year, and others for a longer period, generally for four years. Some of them, according to the will of the testators, are in the gift of private individuals; others of public bodies: some of them cannot be given but after a comparative examination of candidates; while in others persons of a particular name, or from a certain district of the country, have a preference. Bursars, also, are not unfrequently required to follow a particular course of education, or must be at a particular stage of their college studies before they can be nominated. The conditions, in short, under which bursaries may be given away, or held, are nearly as numerous as the number of their founders. It is questionable if their influence be generally beneficial. Much of the money left for their foundation has been alienated or misapplied; and instead of the existing bursaries being given to poor but meritorious students, the reverse is as often the case; while many attend college solely because they can command bursaries, and not because they have any desire for learning, or wish to follow any learned profession. Bursaries thus factitiously add to the number of students, without promoting learning, or adding materially to the number of learned men in the country. At King's College, Aberdeen, there are 34 bursaries, held by 134 students, their aggregate value being about 1,800*l.* a year; and giving about one bursary to every *third* student. In Marischal College there are 40 bursaries held by 106 students, being also about a bursary to every *third* student. In the University of St. Andrew's there are 34 bursaries, whose aggregate value is about 1000*l.* a year, divided among 94 students. In Glasgow, bursaries of the aggregate value of 1,287*l.* a year are held by 71 students. In the university of Edinburgh there are 34 foundations for the benefit of 80 students, distributed as follows:—

|                                                 |       |    |

**Classes.**—The number of professors in the different universities was originally very small. In the university of Edinburgh, for example, there was at first only one; a second was soon afterwards added; then a third; but there were not above six till nearly a century after its institution; these were, the principal, who was also professor of divinity; four *regents*, or professors of philosophy; and a regent of

*humanity, (litera humaniores,)* now restricted to Latin. Each of the regents conducted his class for four successive years, including in his course of instruction almost every branch of science and literature; logic, metaphysics, ethics, mathematics, and physics. The college *curriculum*, or course of study, extended to four years under the same professor; at the end of which time the students, if found qualified, graduated as masters of arts; and if they were meant for the church, they placed themselves under the tuition of the professor of divinity. As society advanced, and the desire of knowledge increased, new subjects of instruction were introduced, new chairs established; and the division of labour in teaching was extensively acted upon. These remarks apply, in a greater or less degree, to all the Scotch universities; but as we have no space for lengthened details, it will be sufficient to lay before the reader the following synoptical view of the present state of the classes in these seminaries. We divide the subjects into four departments, viz.—I. Literature and Philosophy; II. Theology; III. Law; and IV. Medicine.

*Lectureships.*—The King's and Marischal Colleges, Aberdeen, have united in establishing lectureships, (not professorships,) on the following subjects, viz., anatomy and physiology, surgery, *materia medica*, institutes of medicine, medical jurisprudence, botany, midwifery, agriculture. These subjects are taught under the auspices of the two colleges, but the lecturers (unless they are also professors) are not members of the *Senatus Academicus*; a body composed solely of the professors. Marischal College has established two similar lectureships; but though the lecturers are not members of the *Senatus*, we have included them in the list of professors. There is a lectureship in the college of Glasgow on the structure, functions, and diseases of the eye. There are no lectureships in the universities of St. Andrew's or Edinburgh.

*Constitution of the different Universities.* The principal and professors of the different colleges and universities form, when met in council, the *Senatus Academicus* of each. The *Senatus* has the privilege of conferring degrees, and of determining the academical curriculum, or course of study necessary to qualify for degrees. There are two other functionaries, but those entirely of a civil nature, connected with these seminaries, the Chancellor and Lord Rector. The former is merely a nominal officer; but his duties, when they did exist, were of a visitatorial nature; he also had the honour of presiding in the councils of the university. He is chosen by the *Senatus*; and holds office for life. The rector is, in point of dignity, subordinate to the chancellor: his powers, however, have not, like those of the latter, fallen into abeyance; but, on the contrary, are often called into exercise. He is the guardian of the statutes, privileges, and discipline of the university; and has the superintendence of all matters connected with its civil affairs. He is, also, the judge ordinary, and, with the advice of assessors, generally chosen from the professors of theology and law, hears and determines causes. The Rector is elected by the students, who are divided into four classes or sections, each section choosing a delegate. In case of an equality of votes, the former rector decides the preference. He is elected only for a year, but is generally continued in office for two or three years. The university of Edinburgh forms, in some respects, an exception as to these matters. It has no chancellor, and the Lord Provost of the city is Lord Rector *ex officio*. The magistrates, whose predecessors may be regarded as the founders of the university, and who have been at all times its guardians, have power to institute new professorships, and to alter the academical curriculum. The Crown also assumes the right of instituting new professorships. The principal is officially at the head of the *Senatus*, and presides at its meetings. He formerly visited the different classes, examined the students as to their proficiency, and saw that the professors did their duty. But these duties have long been either almost or altogether laid aside. In St. Mary's College, St. Andrew's, and in the university of Edinburgh, the principal must be a clergyman, because in the former, the principal lectures on Systematic Theology, and in the latter, he is officially first professor of divinity, though in this latter capacity no duties now devolve on him. In the other colleges, the principal may be a layman, though this

is seldom the case. When he is a clergyman, he may hold a professorship, or a living in the church; and this, indeed, is generally the case. Robertson, the most illustrious by far of the principals of the Scotch universities, was one of the clergymen of the High Church, Edinburgh.

The following table (exclusive of the lectureships, already referred to) specifies the number of chancellors, rectors, principals, and professors in the Scotch Universities, with the dates respectively of the foundation of these seminaries :—

|                            | When founded. | Chancellors. | Rectors. | Principals. | Professors. |

*Number of Students.*—The number of students who attend the Scotch universities is less now than it was 25 and 30 years ago; a result that cannot, however, justly be attributed to any decay of learning or to a deterioration of these institutions in the interval. On the termination of the war in 1815, the outlet which had previously existed for young men in the army and navy being all but shut, many of them resorted to the learned professions, making a corresponding addition to the number of students. In consequence these professions were completely overstocked in the course of a few years; and having ceased to afford anything like a respectable subsistence to the majority of their cultivators, the motives to enter them, and to become students, declined accordingly. The heavy expense of a college education, may, also, have contributed to the decrease of students. Not only are the class fees the same as during the war, though the price of everything else has fallen, but the course of medical study has been greatly enlarged, partly by the addition of classes not formerly reckoned essential, and partly by extending the time of study to at least four years. In addition the institution of colleges in London, and in Durham, tended to withdraw students from those in Scotland; which tendency has been further promoted by the erection of medical schools in Liverpool, Manchester, and other large towns. It is to these causes, and we believe, also, to a growing sense of the inefficiency of the universities as places of instruction, that the reduction in the number of students must be attributed. The aggregate number of students in the Scotch universities is, at present (1846), about 3,000; of which Edinburgh has 1,109, or, including divinity students, about 1,200; of the remainder, Glasgow has above two-thirds. The attendance at St. Andrew's and Aberdeen, particularly the former, is comparatively small.

The following table shows the number of students that annually matriculated in the university of Edinburgh from 1791-2 to 1846 :—

| Years.    | Students. | Years.    | Students. | Years.    | Students. |
|-----------|-----------|-----------|-----------|-----------|-----------|
| 1791—1792 | 1,279     | 1825—1826 | 2,134     | 1834—1835 | 1,662     |
| 1799—1800 | 1,330     | 1826—1827 | 2,141     | 1835—1836 | 1,580     |
| 1809—1810 | 1,980     | 1827—1828 | 2,102     | 1836—1837 | 1,504     |
| 1815—1816 | 2,097     | 1828—1829 | 2,161     | 1837—1838 | 1,459     |
| 1820—1821 | 2,116     | 1829—1830 | 2,099     | 1841—1842 | 1,157     |
| 1821—1822 | 2,181     | 1830—1831 | 2,023     | 1842—1843 | 948*      |
| 1822—1823 | 2,344     | 1831—1832 | 1,923     | 1843—1844 | 961       |
| 1823—1824 | 2,273     | 1832—1833 | 1,908     | 1844—1845 | 1,000     |
| 1824—1825 | 2,198     | 1833—1834 | 1,754     | 1845—1846 | 1,109     |

This list contains the whole number matriculated during both the winter and summer sessions, including the theological students, whether regular or partial in their attendance, down to 1841-42. The greatest number of students was in 1822-3, when they amounted to 2,344. Since that time, the number has been almost regularly diminishing; the total falling off in 1845-46, as compared with 1822-23 (excluding divinity students), amounts to 962.

The following table shows the proportion in which the decrease has taken place in the different faculties.

| Years.                        | Literature and<br>Philosophy. | Medicine. | Law. | Divinity. |
|-------------------------------|-------------------------------|-----------|------|-----------|
| 1822—1823                     | 930                           | 867       | 274  | 278       |
| 1823—1824                     | 907                           | 870       | 260  | 252       |
| 1824—1825                     | 939                           | 777       | 233  | 249       |
| 1825—1826                     | 822                           | 891       | 298  | 223       |
| 1826—1827                     | 761                           | 858       | 286  | 236       |
| 1827—1828                     | 738                           | 807       | 335  | 222       |
| 1828—1829                     | 745                           | 859       | 301  | 256       |
| 1829—1830                     | 716                           | 896       | 277  | 210       |
| 1830—1831                     | 676                           | 840       | 292  | 215       |
| 1831—1832                     | 650                           | 810       | 273  | 190       |

\* Since the disruption, or the formation of the Free Church in 1843, the number of divinity students has greatly decreased, though again on the advance; but we have no information of their exact numbers. The aggregate number of students since 1842-3, given above, is exclusive of divinity students. The Free Church is at this moment (1846) occupied in the erection of a college, on a large scale, in Edinburgh.

*Number of Graduates in Medicine.*—The first attempt to have the different branches of medicine regularly taught in the university of Edinburgh, was made in 1720, soon after which, five professors in the medical faculty were appointed; and that number has been gradually augmented till the present time. Reckoning from 1726 to 1826, the total number of graduates amounted to 3,070, or to an average of 30 *per annum*. But for the last twenty years the average is rather above 100 a year.

| Years. | Number of Graduates. | Years. | Number of Graduates. | Years. | Number of Graduates. |
|--------|----------------------|--------|----------------------|--------|----------------------|
| 1815   | 82                   | 1830   | 107                  | 1839   | 119                  |
| 1817   | 92                   | 1832   | 112                  | 1841   | 103                  |

*College Discipline.*—At an early period of their history the students attending the universities were required to lodge within their walls, but this is no longer the case. They now reside wherever they find it convenient: it is enough that they attend (and even this is sometimes dispensed with) the classes which they have entered; and observe becoming behaviour in their class-rooms, and within the precincts of the university. The superintendence of their respective professors, and of the *Senatus*, does not extend farther; and they are not required to use any distinguishing academical dress, except in certain classes, in the university of Glasgow. Admittance to college is not connected with any religious test, nor are there any religious exclusions. All sects enjoy the same privileges, whether Jew or Christian, catholic or protestant, episcopalian or presbyterian. The professors, however, are required to be presbyterians, and to subscribe the Confession of Faith, and the standards of the established church; but this condition is sometimes overlooked; and, most probably, will be speedily abolished. The session lasts between five and six months, beginning in some of the universities in October, in others early in November; and terminating in the end of the ensuing month of April. There are in some colleges summer classes, which last only three months, or from the beginning of May till the end of July. Each student must enrol his name in the *College Album*, and pay 1*l.* for a matriculation ticket, whether he attend one class only or any greater number.

The system of teaching in the Scotch universities, though somewhat improved of late years, is exceedingly defective. Except in the Greek, Latin, and mathematical classes, and a few others, it is mostly carried on by lectures, unaccompanied by questions or examinations of any kind, in which the professor is generally quite as anxious to display his own attainments as to instruct his pupils. It is not, however, going too far to say that formal harangues of this sort are about the least efficient of all the modes in which information can be conveyed to the student. Even when compiled in the clearest and delivered in the most appropriate manner, the instruction embodied in a lecture is

apt to escape the hearers or to be misapprehended by them. The student has no time for reflection; and if he happen to withdraw his attention for a moment, or, to lose the thread of the argument, the chances are he will derive but little benefit from what may follow. Even the ablest lectures, if unaccompanied by discussions, explanations, and examinations, are frequently good for nothing as means for the communication of information. The lectures of the late Dr. Thomas Brown, which are published exactly as they were delivered, may be referred to in illustration of this statement. They are both ingenious and refined; but, owing partly to the difficulty of the subjects and partly to the want of clearness and precision in the style, they are not easily or readily followed even by experienced readers; and were totally unintelligible to nine-tenths of the youths to whom they were originally addressed by their author. A good deal has been said about the expediency of university reform in England; but we apprehend that those who inquire into the matter will find that it is still more called for in Scotland.

A Royal Commission was appointed in 1826, to visit the universities and colleges of Scotland. It took evidence in regard to the mode in which they were conducted, the system of instruction in them, their property, the appointment of professors, &c., and gave in a voluminous, if not a very able or satisfactory, report on these subjects in 1830. Nothing, however, has been done to further the recommendations contained in that report, except that a bill, founded on them, was introduced into Parliament in 1836. Its leading provision was the appointment of a general board of visitors over the several universities, and of specific boards for each of these institutions; these visitors to have power to reform the course of study, to abolish old professorships and to institute new ones, &c. It may be mentioned that a similar board of visitors was appointed for the Scotch universities in 1690; and that the rules and regulations that have obtained in them, from that period to the present day, are substantially those determined and enacted by that board. Another Royal Commission was appointed in 1837 for making farther inquiry into the state of the University of St. Andrews; but though it made an elaborate report, chiefly on the unseemly squabbles by which it has been agitated, no measure has been founded on it.

#### *Parochial Schools.*

*History.*—We have previously seen that monasteries contained at one time the only seminaries of education in Scotland; and when schools existed in the larger burghs at that early period, they were under the patronage of some religious house. Long prior to the Reformation there seem to have been such schools, where Latin was taught, and others for affording instruction in the vernacular tongue. As early, indeed, as 1494, the subject attracted the attention of the Scotch parliament; it being then enacted that “all barrones and freeholders that are of substance, put their eldest sonnes and aires to the schules, fra thay be six or seven years of age, and to remaine at the grammar schules quhill they be compeentlie founded, and have perfite Latin; and thereafter to remaine three years at the schule of

art and jure [law], swa [so] that they have understanding of the laws."—(*Acts of the Scotch Parliament*, 1494, c. 54.) These grammar schools, however, were generally attached to some religious establishment, and were subject to the church, and considered as part of the ecclesiastical establishment.—(*Dunlop's Parochial Law*, § *Schools*.)

After the Reformation, the establishment and maintenance of schools became an object of anxious attention on the part of the protestant clergy. In the First Book of Discipline, compiled in 1560, it is recommended that every parish where there is a town of any reputation, shall have a schoolmaster, "able to teach the grammar and Latin tongue;" and that in landward parishes the minister "take care of the youth of the parish to instruct them in the rudiments, particularly in the catechism of Geneva." The Church deserves credit for never having lost sight of this object: many acts of the General Assembly were passed on the subject; and when applying for the restitution of the church property, the endowment of schools was not forgotten by the ecclesiastical courts.—(*Buik of the Universal Kirk*.—*Dunlop, ut supra*.) But though the clergy used all their influence to induce the government to co-operate with them in carrying their views into effect, the latter did not interfere effectually till 1616. In that year the Privy Council enacted, "that in every parish of this kingdom, where convenient means may be had for entertaining a school, a school shall be established, and a fit person appointed to teach the same upon the expense of the parishioners, according to the quality and quantity of the parish." Episcopacy then predominated; and this act was directed to be carried into effect "at the sight and by the advice of the bishop of the diocese in his visitations." In 1633 the act of Council was ratified in Parliament.—(c. 5.) This, which was the first legislative enactment authorising the establishment of parish schools, provided also for their endowment. The bishops of the several dioceses were empowered, with the consent of the landholders, and the majority of parishioners, and if the former refused, with the consent of the latter alone, "to set down and stent upon every plough and husband-land, according to its worth, for the maintenance and establishing of the said school."—(*Dunlop, ut supra*.)

During the civil wars another Act was passed (1646, c. 46), which, though rescinded at the Restoration, was adopted almost *verbatim* in the celebrated statute of William and Mary in 1696, the foundation of the present parochial system. This latter statute is as follows. The estates of parliament "considering how prejudicial the want of schools in many congregations hath been, and how beneficial the providing thereof will be to the kirk and kingdom, do therefore statute and ordain that there be a school founded, and a schoolmaster appointed, in every parish (not already provided), by advice of the presbyteries; and to this purpose, that the heritors (landholders) do in every congregation meet among themselves, and provide a commodious house for a school, and modify (fix) a stipend to the schoolmaster, which shall not be under 100 merks (5*l.* 11*s.* 1*d.*) nor above 200 merks (11*l.* 2*s.* 2*d.*), to be paid yearly at two terms," &c. The land was burdened with the payment of this stipend according to

valuation. And on the failure of the heritors to carry into effect the provisions of this law, the several presbyteries were authorised "to nominate 12 honest men within the bounds, who shall have power to establish a school, modify (fix) a stipend for the schoolmaster, and set down a stent tax for the heritors, which shall be as valid as if done by themselves."—(*Acts of the Scotch Parliament; Dunlop.*)

The provisions of this statute were immediately carried into effect in most parishes, though in others not till a comparatively recent date. In some parishes, situated in remote parts of the country, the statute was a dead letter till within the last few years. But it may now be said that, with extremely few exceptions, every parish is provided with one or more schools, with the legal salary attached to them.

*Salary of Schoolmasters.*—The stipend or salary of schoolmasters continued as fixed by the statute of William and Mary, 1696, till 1803, when it was enacted (43 Geo. III. c. 54), "that from and after the term of Martinmas next, the salary of each parochial schoolmaster, in every parish in Scotland, shall not be under the sum of 300 merks Scots (16*l.* 13*s.* 4*d.*) *per annum*, nor above the sum of 400 merks (22*l.* 4*s.* 5½*d.*), except in the cases hereinafter mentioned." These exceptions are thus explained:—"That in case of those parishes which consist of districts, detached from each other by the sea, or arms of the sea, or of one or two islands, or where it is otherwise of great extent or population, so that one parochial school cannot be of any effectual benefit to the whole inhabitants of such parishes, it shall be competent to the heritors and minister, if they shall see cause, on fixing a salary of 600 merks, or the value of three chalders of oatmeal, to divide the same among two or more teachers, according to the extent and population of the parish," the mode in which these proportions shall be applied being fixed by the statute. But in cases where the heritors have to pay a higher salary, they are exempted from the obligation of providing school-houses, dwelling-houses, and gardens, for the teachers among whom this higher salary is to be divided. To the other teachers, with the salary above specified, the heritors have to provide, "a commodious house for a school," a dwelling-house, "not to consist of *more* (it is presumed that *less* was meant) than two apartments, including the kitchen," together with ground for a garden, which shall contain, at least, a quarter of a Scotch acre. This garden is to be inclosed; but in lieu of the garden, it is competent to make an addition to the salary of the teacher, at the rate of eight bolls of oatmeal per acre; the value of this allowance to be determined by the *fiar* prices of the year. The salary cannot be diminished; but provision is made for its being augmented at the end of every 25 years from the passing of the Act. This augmentation proceeds on the following principle. At the date of the passing of the Act, the chalders of oatmeal was estimated at 200 merks. At the end of each 25 years, the value of the chalders is to be determined by the *fiar* prices throughout the different counties of Scotland; and according as that value is higher than 200 merks, the salaries of the schoolmasters are to be proportionally augmented. In 1828, the end of the first 25 years, the salary of each parochial schoolmaster, agreeably to this principle, was raised upwards of a third; the *maximum* in a parish where there is only one endowed school, being

34*l.* 4*s.* 4*d.*; the *minimum*, 25*l.* 13*s.* 3*d.* At the end of another period of 25 years, another augmentation may take place; but, whatever be the price of grain, the salary cannot be lower than the sum already fixed.—(43 Geo. III. c. 54.—*Dunlop.*)

*Number of Schools.*—From the provisions of the Act of the 43 Geo. III., as stated above, it appears that certain parishes may have one or more endowed schools; and such is the case. There are 916 separate parishes in Scotland, exclusive of the *quoad sacra* parishes; and the total number of schools, endowed by the Act in question, amount to 1,162; so that there are 146 secondary or *side* schools endowed. Generally, there is but one secondary school in a parish, but sometimes more. The average endowment of these 1,162 schools is 25*l.* 10*s.*, making the aggregate salaries, 29,642*l.*—(*House of Commons Papers*, vol. vii., 1837. *Report relative to the Fund for the Relief of the Widows and Children of Burgh and Parochial Schoolmasters in Scotland for 1835*, p. 120.) This endowment, including all Scotland, amounts to about 15*s.* per 100*l.* of the valued rental. But this does not include the newly endowed parliamentary parishes in the Highlands, 41 in number.

*Branches of Education.*—The landlords (heritors) and ministers of parishes determine the branches which a schoolmaster must be competent to teach. These, of course, vary somewhat in different parishes. In burghs, there is often a separate school for classics, or for classics and French. But taking the parochial schools in general, the branches taught are very numerous, comprising Latin, Greek, French, arithmetic, elementary mathematics, geography, book-keeping, and the more elementary departments of an English education. In some instances, Greek, French, and mathematics are omitted. In *side* schools, however, the classics are seldom required as a necessary qualification on the part of candidates for the office of master. The law makes no provision for the payment of assistant teachers; if an assistant be employed, he is paid by the person employing him. Most of the teachers have received a university education. In the three counties, for example, of Aberdeen, Banff, and Moray, out of 137 teachers, there are only 20 who have not studied at college.—(*Report, ut supra.*)

*Induction of Schoolmasters.*—When a parish school becomes vacant, a person to supply the vacancy should be elected within four months from the date of the vacancy. The right of election is vested in the landlords and minister of each parish; but if they delay or neglect to nominate an individual within the time specified, the appointment is transferred to the commissioners of supply for the county. But the nominee, whether of the one party or the other, is not really schoolmaster till his nomination be confirmed by the presbytery, by whom he is examined, and by whom, if he be found disqualified, or if his moral character be deemed objectionable, the election may be set aside. The decision of the presbytery is final in all matters respecting schoolmasters; unless when a civil question arises, which may be carried by the teacher before the court of session. All parochial schoolmasters must be members of the establishment, and are required, on their induction, to subscribe the confession of faith, and the standards of the church. Committees of presbytery visit once a year and examine the

various schools within their limits ; they should also report, annually, on the state of schools to the General Assembly ; but this is not generally done ; and the examinations are, for the most part, exceedingly defective, being, in truth, little better than quackish advertisements in recommendation of the masters. The subjecting of the parochial schools to the inspection of impartial and properly qualified officers, who should report their condition to Government, would be a great improvement.

*Burgh Schools.*—The provisions of the 43 Geo. III., c. 54, do not extend to the case of “a parish which consists only of a burgh, or a part of a royal burgh.” Schools were, in fact, established in most royal burghs, and endowed by the magistrates, long prior to the establishment of parish schools. The election of schoolmasters for royal burghs is vested in the magistrates ; the authority and superintendence of the church not being recognised in their case. In some burghs the endowment of the school is derived partly from the heritors, and partly from the magistrates ; but, even in this case, the latter possess the right to nominate the master, and exercise full control over him, independent either of the presbytery or heritors. — (*Dunlop, § Burgh Schools.*) The aggregate number of 1,162 schools, given above, includes burgh schools.

*School Fees, &c.*—The heritors and minister not only determine the branches of education which a schoolmaster shall teach, but they also fix the amount of fees to be paid by the scholars. The schoolmaster is farther bound to teach gratuitously “such poor children of the parish as shall be recommended by the heritors and minister, at any parochial meeting.”—(*Dunlop.*) In the three counties of Aberdeen, Banff, and Moray, out of 7,674 scholars, 767, or a tenth of the whole, were taught gratuitously ; but this, we incline to think, is above the average of the kingdom. The fees are, in general, exceedingly low ; being sometimes only 1s. per quarter for English. In the burghs, they are about 5s. per quarter for English, writing, and arithmetic ; and 7s. 6d. for the learned and foreign languages. The following list shows the ordinary amount of fees for different branches, in the three counties now mentioned ; and we believe that, with little variation, it may be applied to all parochial schools in Scotland : it is, perhaps, rather above than below the average :—

| Branches.                                     | Fees per Quarter. |    |    |        |
|-----------------------------------------------|-------------------|----|----|--------|
|                                               | s.                | d. | s. | d.     |
| English reading . . . . .                     | from              | 1  | 6  | to 2 6 |
| English, with penmanship . . . . .            | „                 | 2  | 0  | „ 3 6  |
| English, penmanship, and arithmetic . . . . . | „                 | 2  | 6  | „ 4 0  |
| Mathematics . . . . .                         | „                 | 3  | 0  | „ 10 6 |
| Latin . . . . .                               | „                 | 2  | 0  | „ 7 6  |
| Latin and Greek . . . . .                     | „                 | 5  | 0  | „ 10 6 |
| French . . . . .                              | „                 | 5  | 0  | „ 10 6 |

Geography and English grammar are sometimes taught, conjointly with English, without any additional fees : at other times, an additional charge is made. Courses of book-keeping, navigation, or mensuration, are generally charged separately, being from 10s. 6d. to 21s. each course.—(*Report of the Trustees of Dick's Bequest.*)

The following table shows the numbers (in the counties of Aberdeen, Banff, and Moray) that were recently found studying different branches of education, out of a total number of 7,674 scholars. The propor-

tions it exhibits may be regarded as applicable to most parochial schools of Scotland.—(*Report of Trustees, &c.*)

| Branches.       | Number of Scholars. | Branches.     | Number of Scholars. |
|-----------------|---------------------|---------------|---------------------|
| English . . .   | 7,400               | Geography . . | 175                 |
| Writing . . .   | 4,105               | Latin . . .   | 433                 |
| Arithmetic . .  | 2,422               | Greek . . .   | 36                  |
| Mathematics . . | 122                 | French . . .  | 2                   |

We have previously stated that the average fixed salary of parochial teachers may be about 25*l.* 10*s.*; and as the school fees produce somewhat less, their annual income may be taken at about 48*l.*, exclusive of house and garden. In the majority of parishes, however, they have slight additional emoluments, arising from their being session clerks, inspectors of poor, and, in some instances, precentors. They also have small perquisites for making up militia lists, enrolments under the Reform Act, &c. But, including all sources of emolument, we shall, perhaps, be beyond the mark if we estimate their average incomes at from 60*l.* to 65*l.* a year. In some parishes, perhaps about 100, money has been placed in *mortmain*, or bequeathed by benevolent individuals for the better endowment of parish schools, in addition to the legal salary. The revenue arising from this source, which is often very trifling—not exceeding 1*l.* or 2*l.* a year, though sometimes more considerable—is not included in the foregoing estimate.

#### *Society for Propagating Christian Knowledge.*

But parish schools—admirable though they be as far as they extend—are too few and too thinly scattered to embrace the children of the entire community. This deficiency seems to have been felt even at a time when the population of Scotland was only about half what it now is; and means were adopted to supply it. So early, indeed, as the year 1701, a few private individuals in Edinburgh formed themselves into an association now well known under the title of “The Society in Scotland for propagating Christian Knowledge;” the object of which was, by means of schools, to disseminate religious instruction, and thus to promote moral improvement. The General Assembly lent their countenance to the plan by issuing proposals (in 1707), with the view of forwarding the objects for which the society was instituted. In 1709, it obtained the patronage of Queen Anne, who granted letters patent under the Great Seal of Scotland for erecting the subscribers into a corporation. The grand object of the society, as described in the patent, was, as it still is, “the promoting of Christian knowledge, and the increase of piety and virtue within Scotland, especially in the Highlands, islands, and remote corners thereof, where error, idolatry, superstition, and ignorance do mostly abound, *by reason of the largeness of the parishes and the scarcity of schools.*” The schools instituted and supported by this society are of two kinds. Those on the first patent (granted by Queen Anne) are exclusively for literary and religious education: those on the second patent (granted by George I.)

are chiefly schools of industry for the instruction, particularly of female children, in spinning, knitting, sewing, &c.; but where the ordinary branches of education are also taught, when there is no other school in the neighbourhood. The second patent schools are taught solely by females. The society has also under its employment catechists and missionaries, which last are ordained clergymen of the established church. The duty of the catechists is to go from house to house, in a given district, to read and expound the Scriptures to the different families, and to catechise or examine them. The society has accumulated a capital of about 100,000 .,—the result of donations, annual contributions, and legacies. The capital is vested in land, mortgages, and government funds. They have an annual sermon preached in Edinburgh, when a collection is made for behoof of the funds. All these sermons have been published, and have appended to them the reports of the society. The following table shows the extent of their operations, which have regularly been increasing, in 1844.—(*Report for 1844, by John Tawse, Esq. Advocate.*)

| Number of Schools, &c.        | Average Number of Scholars in each. | Total Number. | Average Salaries. |    |     | Total annual Amount of Salaries. |    |    |
|-------------------------------|-------------------------------------|---------------|-------------------|----|-----|----------------------------------|----|----|
|                               |                                     |               | £.                | s. | d.  | £.                               | s. | d. |
| 150 Schools on first patent . | 66½                                 | 10,979        | 15                | 14 | 4½  | 2,358                            | 0  | 0  |

| 11 Missionaries . . . .       | ..                                  | ..            | 45                | 18 | 2   | 505                              | 0  | 0  |
| 39 Catechists . . . .         | ..                                  | ..            | 8                 | 10 | 9   | 333                              | 0  | 0  |
| 359                           | ..                                  | 13,991        | .                 | .  |     | 4,238                            | 0  | 0  |

All the society's teachers, male and female, receive fees from their scholars. All the teachers on the first patent have a house, garden, and pasture for a cow,—accommodations generally, if not always, contributed by the landholders of the place in which the school is placed; indeed, as a condition of its being so placed. The landholders, it may be remarked, have been always liberal on this point, and in every other respect as regards this excellent society. Its operations may be said to be confined exclusively to the Highlands and islands: at least, of 357 functionaries, only six teachers and one missionary are stationed south of the Forth and Clyde. When the society was instituted, neither the Bible nor any religious book had been translated into the Gaelic language; they have supplied this defect. They have had the Scriptures translated into that language, and a great variety of religious works, either wholly or partially at their own expense. All the teachers are obliged to teach Sunday schools.

*The General Assembly's Education Committee.*

But, notwithstanding all that the Society for propagating Christian Knowledge had done, the state of education in the Highlands and

islands, was found to be very defective. In 1824, the General Assembly appointed a committee to inquire into the existing state of education and religious knowledge throughout Scotland. This committee ascertained that, in the south and east parts of the country, the number of schools was ample, and that scarcely an individual could be found who had not been taught to read. The result of their inquiries as to the rest of Scotland was far from being so favourable. They found that, in the north-west parts, about 10,500 children, under 15 years of age, were destitute of the means of education, and that 250 additional schools were necessary: and they afterwards ascertained that the total number of persons of both sexes, of six years of age and upwards, in all the parishes of the Highlands and islands, unable to read either in the English or Gaelic language, amounted to 83,397. Nor was the state of education in the Lowlands, particularly in cities, so favourable as the committee at first was led to believe. In five parishes in Glasgow, for example, it was proved that there were no fewer than 1,432 persons of both sexes, of 15 years of age and upwards, unable to read.

The General Assembly's Committee has been annually continued; and has now, indeed, become a permanent body. By means of subscriptions, donations, church collections, and bequests, they have accumulated a capital stock of 10,240*l.*, and their annual expenditure is between 2,000*l.* and 3,000*l.* They have 187 schools in operation, which is about double the number that existed ten years ago; and they contemplate a speedy extension of the number. A Sunday evening school for giving instruction in religion is attached, as part of the system, to each of these seminaries. To teachers who can teach the higher branches, such as Latin, mathematics, &c., they give a salary of 25*l.*; to those professing to teach only the ordinary elementary branches, 20*l.* The teacher is, besides, supplied with a school and dwelling-house, a garden, fuel, and a small patch of land; accommodations either provided by the heritors, or by the people immediately interested, on the principle adopted by the Society for propagating Christian Knowledge. The teachers are allowed to charge fees, to the same amount as are levied at the parish school: but in many instances no fees can be obtained, owing to the poverty of the people: in others, reduced fees are taken; and when full or partial fees are paid, it is not always in money, but sometimes in some sort of produce, and sometimes by work done on the garden or land of the teacher. It is ascertained that the total amount of fees does not exceed 5*l.* per annum for each teacher. There are libraries attached to the schools, the books being issued for the benefit of the scholars, and of those who attend the Sunday evening schools.

From returns made from 82 of the schools, the results are as follows:—

| Number of Schools. | Total Number of Scholars. | Number of Scholars paying no Fees. | Number paying equivalents. | Number paying less than 5 <i>l.</i> a year. | Number who pay more than 5 <i>l.</i> |
|--------------------|---------------------------|------------------------------------|----------------------------|---------------------------------------------|--------------------------------------|
| 82                 | 6,806                     | 1,650                              | 1,610                      | 3,137                                       | 409                                  |

The following tables give a view of the comparative state of these

schools, and of the different branches of education taught at them, in 1837 and 1845, respectively :—

| Total Number of Schools. | Total Number of Scholars. | Numbers learning. |          |          |                  |                   |                 |                   |        |
|--------------------------|---------------------------|-------------------|----------|----------|------------------|-------------------|-----------------|-------------------|--------|
|                          |                           | Gaelic.           | English. | Writing. | Arith-<br>metic. | Book-<br>keeping. | Geo-<br>graphy. | Mathe-<br>matics. | Latin. |
| 1837.<br>89              | 7,366                     | 2,047             | 5,930    | 3,178    | 3,002            | 115               | 343             | 61                | 85     |
| 1845.<br>187             | 11,181                    | 1,354             | 9,169    | 4,544    | 2,912            | 239               | 2,067           | 153               | 139    |

It thus appears that, while within 1837 and 1845, the number of pupils has increased upwards of a third, the proportion learning Gaelic has decreased a half; and that English, Geography, Mathematics and Latin have made a striking advance. Education has assumed a more healthy state; and the Erse of the Highlander is gradually giving way to the English.

*Normal Schools.*—There are two Normal Schools, one in Edinburgh, and the other in Glasgow, established and supported partly by a government grant, and partly by the General Assembly of the established church. The Edinburgh school was attended in 1845–6 by 84 teachers, pupils in the art of tuition, and by 500 children: the Glasgow seminary by 17 teachers, and by upwards of 500 children. Both institutions are in the greatest state of efficiency, and promise to be productive of extensive and lasting advantage to the education of Scotland.

*Schools belonging to the Secession Church.*

The Secession Church has, like the Establishment, taken much interest in the cause of education. A considerable number of congregations have schools, established by themselves, for the education of the children of their own members, though open to others. Congregations, in many instances also, have schools for the benefit of the poor. The number of schools, both in cities and in the country, thus owing their origin to the Secession Church, cannot be accurately estimated, but are very considerable, probably exceeding 100. Most other bodies of Christians, particularly the presbyterian dissenters, have distinguished themselves by their zeal in establishing schools.

In some of the schools maintained by the Secession, children of their own persuasion are educated either gratuitously or at a reduced rate. These schools are on a very large scale in large cities—Edinburgh for example—and form models of good tuition. Various schools are also instituted in towns by the Secession Church, for the education of the destitute poor not connected with them; and the subscription schools throughout the country are liberally supported by dissenters. In addition to all this, the dissenting ministers have (generally speaking), throughout their communion, schools which meet once or twice a week for religious instruction. The number of *Sunday schools* in Scotland is about 600, of which two thirds belong to dissenters.\*

\* The Free Church is making great efforts to have a school connected with each congregation. A good many such schools are in operation, and more are

*Private or Voluntary Schools.*

Under this designation we include all schools not comprehended under the previous heads of Parish Schools, or Schools of the Society for propagating Christian Knowledge, the General Assembly's Education Committee, and the Secession. We have no very accurate data for ascertaining the number of these voluntary schools; but it is supposed that they are to the established schools nearly as 4 to 1, or about 4,000 to 1,162, making in all about 5,150 schools; and supposing they are attended, at an average, by 50 pupils each, we shall have an aggregate attendance of 225,000; and adding to this number for female seminaries, for private boarding schools for boys, &c., and for children taught in private families by governesses and tutors, we may safely estimate that about a *tenth part* of the population are being educated.

We have already noticed that several of the parish schools, in addition to the legal salary, have been endowed, to a greater or less extent, by the benevolence of private individuals. Some of these schools have been so munificently endowed, that education, as a condition of the grant, is free either to the whole or to a large part of the population of the parish. The late James Dick, Esq., of London, bequeathed to the parochial schoolmasters (not in burghs) of the counties of Aberdeen, Banff, and Moray, such a sum as yields 25*l.* a-year to each, in addition to his other emoluments.\* The late Dr. Bell, whose name is so honourably connected with the history of education, either gave during his lifetime, or bequeathed, munificent sums for founding and endowing seminaries at St. Andrew's, Leith, Cupar-Fife, and Edinburgh. There is a species of schools established within the last 30 years, called academies, in the larger burghs, such as Edinburgh, Inverness, Tain, Montrose, Cupar Fife, Dundee, Perth, Dumfries, Ayr, &c. They are either under the direct patronage of the subscribers by whom they have been founded, or of the magistrates. These academies and the ancient burgh schools, such as the High School of Edinburgh, are, perhaps, the best seminaries in Scotland, embracing all the necessary and ornamental branches of education, each taught by a separate master.

*Mechanics' Institutions.*—There are Mechanics' Institutions, or voluntary associations for giving instruction, by means of lectures, on scientific and philosophical subjects, established in Edinburgh and Glasgow, and in all the larger towns and burghs throughout Scotland.

SECT. 3.—*Education in Ireland.*

The state of public education in Ireland has been the subject of frequent parliamentary investigation. In 1807, a commission of inquiry was issued to several individuals in Ireland, of high literary character, who submitted the results of their investigation in a series

being erected; but neither the exact number nor character of these seminaries can yet be stated.

\* The Report to the Trustees of this Bequest in 1835, so often referred to, is an able paper; and reflects credit on the ability and sagacity of the secretary, by whom it was drawn up.

of fourteen reports, ending in 1814, which contain much accurate and well-digested information, followed up by enlarged views of the means of removing defects and abuses, and of promoting an improved education. But their recommendations having been only partially acted upon, the increasing importance of the subject led to the formation of a new board in 1824 under the name of Commissioners of Education, whose attention, though generally directed to the same objects as those of the previous commission, was more peculiarly turned to the state of education, both public and private, among the working classes. A third commission was issued to the same effect, in 1833, to a board called the Commissioners of Public Instruction. The reports of these Commissioners, and those of other public bodies, to whom the management of particular departments of education had been delegated from time to time, with the reports of the numerous voluntary associations for the same purpose, supply much authentic information, which, however, it is difficult to extract from the voluminous and irrelevant matter in which it is buried. It is remarkable that an inquiry into the state of Trinity College, Dublin, which draws so large an income from public grants, and from its teaching the higher departments of science and literature to the sons of the nobility and gentry, formed no part of the investigations, nor consequently of the reports, of these commissions.

The system of public instruction may be considered as divided into the following leading departments:—Collegiate, affording instruction in the higher branches of science and literature; Classical, for the rudiments of the same branches; Mercantile or English, designed for the middle classes, who do not require a knowledge of the higher sciences or of the learned languages; and Elementary, for the instruction of the great body of the population in reading, writing, and the simpler processes of calculation. The colleges consist, 1st, of those supported wholly or in part by grants of public money; and, 2nd, of those wholly supported by the contributions of private associations or individuals. The first class comprises Trinity College, Dublin; the Royal College of St. Patrick, Maynooth; the Royal Academical Institution, Belfast; and the new colleges of Cork, Belfast, and Galway, founded under the Act 8 and 9 Vict., c. 66. The second class comprises the college of St. Columba, Stackallen; St. Patrick, Carlow; St. Jarlath, Tuam; St. Kyran, Kilkenny; and the Catholic Missionary College of All Hallows, Drumcondra, near Dublin.

*Trinity College, Dublin.*—So early as the year 1311, John Leck, archbishop of Dublin, procured a bull from Pope Clement V. for the foundation of a university in Dublin, which was not acted upon. His successor, Alexander de Bicknor, obtained a similar bull from Pope John XXII., which was carried into effect. A code of statutes was drawn up for the government of the university, and a writ of protection was issued in favour of the students resorting to it, whether from Ireland or England. The distracted state of the country, however, proved a bar to its prosperity; and after lingering in a state of obscurity till the time of Henry VIII., it was closed on the dissolution of the monastic institution at St. Patrick's, where it had been established. The town of Drogheda, once second only to Dublin in political and

commercial importance, was authorised by an Act of Parliament in 1465 to establish a university, with the same privileges as that of Oxford; but there are no traces of such an institution having ever existed. After a fruitless attempt to restore the ancient university in St. Patrick's during the reign of Elizabeth, another was opened through the exertions of Archbishop Loftus, who prevailed on the corporation of Dublin to assign the ground and buildings of the dissolved monastery of All Saints on Hoggins Green, in the eastern suburbs, for its use, and procured a charter from the Queen erecting it into a corporation, consisting of a provost, three fellows, and three scholars, under the name of "The College of the Holy and Indivisible Trinity, near Dublin." The erection of the necessary buildings was forwarded by a voluntary contribution of the gentry throughout Ireland; and means for its future maintenance, though on a very limited scale, were derived from royal grants. The first students were admitted in 1593. By a new code of statutes, framed in 1627, the number of fellows was fixed at seven, of scholars at seventy, and of probationer fellows at nine. By a subsequent charter, procured through the influence of Archbishop Laud, several material changes were made in its constitution, most of which continue to the present time. The nomination of the provost was reserved to the Crown. The fellowships, which had hitherto expired at the end of seven years after taking a master's degree, were made tenable for life. The nine probationary fellows were admitted members of the corporation, under the name of "junior fellows;" but the entire government, both as to discipline and finance, was vested in the provost and seven senior fellows, subject to the control of visitors nominated by the Crown, in whom the right of ultimate appeal was vested. A special clause provided that no person should profess or teach the liberal arts in any other place in Ireland without a license from the Crown. During the Protectorate the university was nearly extinct, but was revived again, according to its previous forms, at the Restoration. At this period a proposal was made to found a second college in Dublin, to be of the university, and to be named the King's College. Lands were appropriated for this purpose, and a liberal grant of money issued, but the scheme was not carried into effect. During the residence of James II. in Ireland a college was opened in Back-lane; but, having been transferred to Trinity College at the Revolution, it was soon after closed. The funds of the college were considerably augmented by grants of land in Ulster by James I., and elsewhere out of the forfeited lands by Charles II. In 1698, a new fellowship was endowed from a bequest of Dr. Richardson, Bishop of Ardagh; in 1724, three were added from the funds of Erasmus Smith; in 1762, two from the bequest of Provost Baldwin; in 1808, three more were endowed out of the increased revenues of the university; and in 1840, ten new fellowships were founded under the following restrictions, viz., that, at the annual election for fellowships one new fellow should be elected in the year 1840, and in each of the next succeeding nine years, over and above any vacancies that should occur in the subsisting body of fellows; the four senior only of the additional fellows to be tutors, the others to enjoy all other privileges and emoluments of office. After 1849, when the additional number shall have been completed,

there is to be an annual election of one new fellow, though there should be no vacancy among the body of fellows, and the candidate so elected shall succeed to the first vacancy that occurs after his election, unless there be at the same time two or more persons so elected, as last mentioned, in which case the senior shall succeed to the vacancy, and so on in rotation. After 1849, no more than two fellows are to be elected annually, whatever may be the number of vacancies.

The government of the university is vested in the Chancellor; the Vice-chancellor, who may, in special cases, appoint a pro-vice-chancellor; the Provost; the Vice-provost, usually the first of the seven senior fellows; two Proctors; two Deans and a Censor; two Librarians; a Registrar, who performs the duties of secretary or actuary to the Provost and senior fellows; two Bursars; a Registrar for the electors admitted under the Reform Act; an Auditor; six university preachers; four morning lecturers; and nine examiners. The ordinary details of management are superintended by the provost and senior fellows, who in this capacity are called "The Board," and meet every Saturday.

The system of instruction is carried on by means of professors and lecturers. These are as follow:—the Regius Professor of Divinity, established on the first foundation of the college; the Regius Professor of Civil and Canon Law; the Regius Professor of Feudal and English Law; the Regius Professor of Physic; the Regius Professor of Greek; a Lecturer in Divinity on the foundation of Archbishop King, in 1718; a second Lecturer of Divinity, established under a bequest of Mrs. Anne Donnelan for the encouragement of religion, learning, and good manners; a Lecturer in Mathematics, on the endowment of Arthur Earl of Donegal in the 17th century, and a Lecturer, with three assistants, in Greek. From the funds of Erasmus Smith have been endowed the five professorships of natural philosophy, oratory, mathematics, history, and the Oriental languages. The professorship of astronomy arose out of a bequest of Provost Andrews in 1774, left by him for the erection of an observatory, and the maintenance of properly qualified persons to superintend it. The observatory has been erected at Dunsink, near Dublin, where the professor, who bears the title of Royal Astronomer of Ireland, resides. He is required to make and publish a regular series of astronomical observations, and to give instructions in the theory and practice of astronomy. This professorship, from the scientific qualifications of the individuals by whom it has been filled, the excellence of the apparatus, and the accuracy of the observations, stands high in the estimation of the scientific world. The professors of anatomy, chemistry, and botany were appointed under the Act for the establishment of a complete school of physic in Ireland, passed in 1785. The school consists of the lecturers already named, and of three more on the foundation of Sir Patrick Dunn's hospital. A lecturer in natural history, to whom the care of the museum is intrusted, was appointed in 1816. A professorship of political economy has been established, and an endowment granted for its support, by Dr. Whately, the present Archbishop of Dublin. A catechist, with eight assistants, is elected annually from among the fellows. There are also professors of Moral Philosophy, Biblical Criticism, Greek, Irish, Anatomy and

Surgery, Chemistry, Botany, Geology, French and German, and Italian and Spanish languages. A school of Engineering was established in 1842, in the view of combining the theoretical and practical instruction requisite for the profession of civil engineering. It consists of professors and lecturers in mathematics, theoretical and practical mechanics, physics, chemistry as applied to the arts of construction, mineralogy, geology, practical engineering, and drawing and surveying. The professional course continues during three years, at the close of which diplomas are awarded by the board, on the recommendation of the professors, to such students as are deemed qualified to commence the practice of the profession.

The details of literary and scientific instruction, and the superintendence of the moral discipline of the students, are more especially committed to the junior fellows. The examinations, for fellowships, which are held on the four days preceding Trinity Sunday, are conducted by the provost and senior fellows, aided, if deemed necessary, by the professors of natural philosophy and mathematics. The subjects are, logic, mathematics, natural philosophy, ethics, history, chronology, Latin, Greek, and Hebrew. The examination is in Latin. The candidates must be at least of the degree of B.A. The successful candidate is considered as having secured a liberal and respectable independence for life; pecuniary premiums, sometimes to a large amount, are conferred upon those who, though unsuccessful, have displayed striking marks of genius or industry during the investigation. It may be mentioned, that the frequency of these elections is considerably increased, by the circumstance of the college having at its disposal 22 lucrative benefices in the northern dioceses. When any of these becomes vacant, it is offered to each of the clerical fellows in succession, commencing with the eldest. As the incomes of several of these benefices are a good deal more valuable than the average receipts of a junior fellowship, resignations for parish livings were often made so long as celibacy was imposed on the clerical fellows; but, since it is no longer required, the inducements to resignation have been much diminished. By a late Act for regulating the established church of Ireland, the Archbishops of Armagh and Dublin are required to set apart a benefice not exceeding the annual value of 1,000*l.* out of each of the ten extinguished bishoprics, to which, when vacant, they are to nominate a fellow or ex-fellow of the college. In case of the acceptance of it by a fellow, he is to vacate his collegiate situation. It may be also added, that the incomes of the provost and senior fellows arise partly from the annual stipends of the professorships they hold, but chiefly from the college lands, which are let on short leases, periodically renewable on payment of a fine. The rents go to the general fund: the fines are applied to maintain the senior fellows. The provost derives his income from lands peculiarly appropriated to his use. The junior fellows also derive some part of their income from stipends issuing out of the funds of the university, and some part from minor professorships or lecture-ships; but their chief source of income arises from the fees of their pupils. Every student on admission, after an examination of some extent and strictness as to his proficiency in Greek and Latin, is bound to enter himself under one of the junior fellows, chosen by him at

pleasure, who is afterwards looked upon as responsible for his pupil's general progress and moral conduct, and who aids his studies by instructions auxiliary to those of the public professors.

The chief stimulus to study arises from the periodical examinations. By a late regulation the year is divided into three terms, Michaelmas, Hilary, and Trinity. Those of Michaelmas and Hilary are followed each by a short recess; that of Trinity by a vacation of three months. Each term commences with an examination, not only of the studies of that immediately preceding, but of the substance of most of those which had been previously gone over. The undergraduate course consists of four years, in each of which the students are distinguished by the titles of junior and senior freshmen, and junior and senior sophisters. The course of scientific instruction is as follows:—In the first year, mathematics; in the second, logic; in the third, astronomy and physics; and in the fourth, ethics; in addition to which the student is expected to become a considerable proficient in Greek and Latin. A twofold course of studies is laid down for each examination, the one for such students as wish merely to pass through the undergraduate course; the other for those who aspire to academic honours. The prizes during the first three years consist of books. At the close of the fourth year superiority is rewarded by an appointment to the moderatorships in physics and mathematics, in ethics and logic, and in classics. Other prizes are awarded for extraordinary proficiency in particular departments of study.

Besides the classification arising from seniority, there is another founded on the student's station in society. According to this latter principle, students are arranged in four ranks, viz.: 1. Noblemen and baronets, styled Nobiles, Filii Nobilium, and Equites, who are entitled to their degree at the end of two years. 2. Fellow commoners, who are entitled to graduate at the commencement of their fourth or senior sophister year. These, as well as the former class, pay a high annual stipend, and dine at the same table with the fellows in the Commons' hall. 3. Pensioners, who constitute the great body of the students; and, 4. Sizars, who are educated and partly supported out of the general fund. The number of the latter is limited to thirty, and admission is obtained after a very strict examination held annually to supply vacancies. Each of these orders is distinguished by a peculiar dress.

The annual charges of a student, including tuition, but exclusive of rooms and commons, are—for noblemen, 60*l.*; fellow-commoners, 30*l.*; pensioner, 15*l.*; sizar, 5*l.* 1*s.* 3*d.*; with an entrance fee of half the amount of the yearly charge from each class, together with a stamp duty of 1*l.* on admission or matriculation.

The 70 scholars form a distinct body among the undergraduates, dependent solely on literary merit, being elected after an examination in the Greek and Latin classics, held at the close of the third year. A scholarship continues till the holder is entitled to the degree of M.A., a period of from four to five years, during which he receives a trifling emolument, partly in money, partly in free-commons. Twenty scholars are admitted by election of the board to what are called natives' places, which gives some addition to their emoluments.

The periods, called commencements, for conferring degrees, are held

twice a year,—on Shrove Tuesday, and on the Tuesday next after the 8th of July. The student, after having completed his undergraduate course, is styled a candidate bachelor: on being admitted to his degree he obtains successively year after year the titles of junior, middle, and senior, bachelor; he is then admissible, after having attended certain courses of lectures, to the degree of M.A. A Bachelor of Divinity must be an M.A. of seven years' standing: a Doctor in Divinity must have been a B.D. of five years', or a Master of twelve: a Bachelor of Laws must be an A.B. of three years' standing: a Doctor of Laws must be an LL.B. of five years' standing, or of four if he be already an M.A. The rules of admission for medical degrees require several special conditions of attendance on specific courses of medical lectures.

Trinity College is a political as well as a literary corporation: the charter of James I. vested the provost, fellows, and scholars with the privilege of sending two members to the Irish Parliament. The Act of Union restricted this number to one; but the original number was restored by the Reform Act, which also made a very great change in the constituency. The right of election was then extended to all members of the university of twenty-one years of age, who at that time had, or who should thereafter obtain, a fellowship, scholarship, the degree of Master of Arts, or any higher degree. To exercise this right, the elector's name must be retained on the college books, for which he pays 1*l.* a-year. Persons possessed of the above recited qualifications who had withdrawn their names from the college books were permitted to restore them on payment of a sum of 2*l.* And by a subsequent Act, all persons with whom the college may compound for a gross sum of 5*l.* for life are entitled to have their names continued on the college books, and to vote at parliamentary elections without any further payment. The number of the constituency amounts at present to about 1,500.

The buildings of Trinity College cover a large space of ground nearly in the centre of Dublin. They consist of three quadrangles, one of which is of great extent and much architectural beauty. The library is by much the finest, as well as the largest of the public buildings, being a gallery 210 feet in length, 40 in breadth, and 40 in height. The books are placed in recesses on each side: their number has been estimated at about 100,000. The origin of this establishment is peculiar. On the defeat of the Spaniards at Kinsale in 1602, the victorious soldiery, being determined to commemorate their triumph by some permanent memorial, collected among themselves the sum of 1,800*l.* to be laid out in books for the library of the infant establishment of Trinity College, which was entrusted to Archbishop Usher. The private library of the latter, and that of Dr. Baldwin, one of the Provosts, with some others of minor note, were afterwards bequeathed to it. A clause in the Copyright Act entitles the university to a copy of all publications entered at Stationers' Hall. The other public buildings are, the chapel, the theatre or examination-hall, enriched by a fine monument of Dr. Baldwin, the museum, the dining-hall, the medical school, and the printing office. The rest of the structure consists of apartments for the residence of the fellows and students; attached to the buildings

is a spacious lawn, well planted, for the recreation of the students, and two smaller pieces of ground for the use of the provost and fellows.

*New Colleges.*—In 1845, a considerable addition was made to the means of instruction in the higher departments of literature and science, by the Act 8 and 9 Vict., c. 66, which empowers the Treasury to advance 100,000*l.* for the building of new colleges in Ireland, and to issue a sum of 21,000*l.* a-year for the support of the same. Under this Act colleges have been founded in Cork, Limerick, and Belfast, each to be governed by a president and vice-president, nominated by the Crown and by Professors in the faculties of Arts, Law, and Medicine. The education to be furnished by them is to be of the most approved species; and as no religious test is to be required either on the part of the professors or students, they will be open alike to all classes of people. Religious instruction may, however, be given in the halls of the colleges; but attendance on such instruction is to be strictly voluntary. These colleges are not to grant degrees.

We regret to have to add, that these institutions have met with much opposition from a considerable portion of the Catholic clergy. Probably, however, this opposition will die away as the benefits of the institutions become more apparent. They are not necessarily, as they have been called, "Godless Colleges." Religious instruction may be, and no doubt will be liberally provided for in them or in the places where they are established; but there will be no compulsion in the matter; Catholic students will not be obliged to hear Protestants lecture on theology nor will Protestant students have to attend the prelections of Catholic doctors.

*College of St. Columba, Stackallen, (co. Meath.)*—This collegiate establishment was founded in 1843, by private endowment, for the education, exclusively, of young men, members of the United Church of Great Britain and Ireland, according to its principles and formularies. It consists of a warden, seven fellows and tutors, and twelve scholars, ten of whom receive annual stipends of 42*l.*, and two of 52*l.* 10*s.* each. All the scholars are required to learn and speak the Irish language. The college fees, including tuition, are 70 guineas a-year paid in advance.

The *Royal College of St. Patrick, Maynooth*, was founded in 1795, for the education of persons designed for the Roman Catholic ministry in Ireland. It is vested in a board of trustees, of whom the Roman Catholic archbishops are members *ex officio*, the remainder being selected from the Catholic hierarchy and nobility, in the proportion of seven of the former to six of the latter. The government of the college is administered by a board of visitors, partly chosen by election, and partly nominated by the Crown, under the provisions of the Act 8 and 9 Vict., c. 25, but the powers of the visitors do not relate to or interfere with any matter having reference to the tenets, discipline, or authority of the Romish church. These important matters are entrusted to another board of visitors, who must be members (and are usually dignitaries) of the Roman Catholic church. The chief functionaries of the establishment are the president, vice-president, and three deans; besides whom, there are three professors of divinity, and nine others, including a professor of the Irish language, giving in-

struction in various branches of literature and science. The number of students, on the first opening of the classes, in 1795, amounted only to 50 ; but it has since progressively increased to 450, to which it was limited, by the inadequacy of its funds to admit of further augmentation. But under the new regulations, provision is made for 520 students. These are comprised, 250 in four junior classes, and 250 in three senior classes, with a class of 20 superior students, who each derive, exclusive of other allowances, an income of 62*l.* a-year from a fund left by Lord Dunboyne for that purpose. The funds for defraying the expense of the establishment were derived, previously to 1845, from an annual parliamentary grant, (usually of 8,928*l.*.) and from bequests and fees. These, however, were quite insufficient for the proper support of an institution having to provide for the education of the Catholic clergy of Ireland. The salaries of the professors and the accommodation of the students were alike inadequate and paltry ; while, despite this miserable economy, the institution was getting into debt, and the number of pupils was unequal to the wants of the priesthood. It is needless to say, that the consequences of such a state of things were most prejudicial to the public interests ; and to obviate these, and to place the institution on a footing more suitable to its important object, the annual parliamentary grant (of 8,928*l.*) was changed in 1845 to a permanent grant, and increased to 26,360*l.* a-year, a sum of 10,000*l.* being, at the same time, voted for the repair and enlargement of the buildings and library. The trustees of the college have been also authorised to hold such land and other fixed property as may be left for its behoof, to the value of 3,000*l.* a-year. In consequence of this liberal addition to its funds, the emoluments of the presidents and professors, and the education and accommodation of the pupils, have been materially improved ; so that the most beneficial effects may be expected to result from the measure, directly by the greater allurements it will hold out to professors of superior merit and attainments to enter the college ; and, indirectly, by the grateful sense which they and the pupils cannot but feel, of the liberality and munificence of the government. Hitherto the students have belonged, with but few exceptions, to the middle and lower classes of Roman Catholic landholders and farmers. Public examinations are held twice a-year. The site of the establishment is a tract of 54 acres, adjoining the town of Maynooth, and the buildings, which form three sides of a quadrangle, comprise a chapel, refectory, library, lecture-rooms, dormitories and professors' residences. The library contains 12,000 or 15,000 volumes, chiefly on theological subjects.

There certainly has been much to object to in the course of education hitherto followed at Maynooth ; and the priests which it has sent forth, have, for the most part, contrasted very unfavourably with those educated in foreign seminaries. We, however, are inclined to think, that this untoward state of things has been principally ascribable to the poverty and destitution in which the college has hitherto languished. Its professorships could be no object to men of ability ; and the teachers and students must have been equally disgusted when they compared the pittance allowed them by the state, with the vast sums lavished on the established church, though supplying only the wants of a small minority of the population. But a great change for the better

may be now fairly anticipated. The new endowment will make chairs in Maynooth be sought after by men of superior talents: while the better education, and the greater comfort in which the students are supported, will make it be resorted to by a higher order of pupils, will tend to soften prejudices and asperities, and make the priests less indisposed to the English connexion.

Considering that Maynooth had received an annual grant of nearly 9,000*l.* a-year since its foundation in 1795, the intolerant opposition made to the late wise and liberal measure could hardly have been anticipated. Happily, however, it was not allowed to thwart its success, which is important, not on its own account merely, but as being (as we trust is the case) the first step towards that endowment by the state of the Catholic clergy of Ireland, which is, in all respects, so indispensable to the well-being of the country.

*Royal Belfast Academical Institution.*—The wish to possess a place of liberal education, which might preclude the necessity of having recourse to Dublin or Scotland, to acquire instruction in the higher branches of literature and science, suggested the idea of forming such an institution in Belfast. A plan to effect this object, laid before the public in 1807, was so well received that, in a few weeks, a fund of 16,000*l.* was raised in the town and its vicinity, which was soon after augmented to 25,000*l.* by subscriptions from other parts of the United Kingdom and the East Indies. In 1810 the institution was incorporated under the name of the Belfast Academical Institution, by an Act of Parliament, which divided the governing body into two boards, one of managers to superintend the financial department, the other of visitors to regulate the details of instruction and discipline, each to be elected by and from among the subscribers. The Act requires that all bye-laws be submitted to the Irish Privy Council; and, if not disapproved of by that body within thirty days, they are to be of full force until repealed or altered by the body that framed them. The fund subscribed having been wholly expended on the buildings, an annual grant of 1,500*l.* for the payment of professors and teachers was given by parliament; but having been withdrawn in consequence of the expression of peculiar political opinions by some of the teachers at a public meeting, it was renewed in 1824 at the recommendation of the commissioners of education, and for some time past has amounted to 1,900*l.* a-year. The institution is divided into a collegiate and a school department; the former consists of the professors of natural and moral philosophy, logic and belles lettres, mathematics, Latin and Greek, Hebrew and Oriental languages. It has also a medical and a theological department. The professors of divinity are appointed by the general synod of Ulster, and the seceding or presbyterian synod of Ireland. The school department consists of rudimental schools for teaching Greek, Latin, Italian, French, English, mathematics, geography, and drawing; each course being superintended by a separate master: the teachers in this department form a second board of faculty. The course of study and discipline in the collegiate department resembles that of the Scotch colleges, the professors giving their instructions in an annual session, commencing in November and ending in May. The school system is similar to that adopted in other great schools in Ireland. Public examinations are held in

summer at the close of the annual session. The number of students is about 400, divided nearly in equal proportions between the two departments. The synod of Ulster recognises the general certificate of the higher faculty as equivalent to a degree of Master of Arts of Glasgow, or of Bachelor of Arts of Dublin. The buildings, which are limited in extent, and without any pretensions to architectural elegance, contain lecture-rooms for the professors, apartments for the instruction of the junior pupils, with accommodations for boarders, a museum, and a library. The fees of pupils in both departments are moderate, and free scholars are admitted under certain limitations upon a certificate of an original subscriber of 100*l.* or upwards.

This institution is authorized to grant certificates to candidates which entitle them to be examined for degrees in Arts and Law in the University of London.

*St. Jarlath's College, Tuam.* — The College of St. Jarlath was founded in 1814 by the late Dr. Kelly, Roman Catholic Archbishop of Tuam. It consists of a principal, three ecclesiastical, and two lay professors. The course of study comprises Theology, Hebrew, Greek, Latin, Italian, and Irish, and is modelled so as to serve as a preparation for the lay professions as well as for admission into the Roman Catholic ministry. The number of pupils is about 140 designed for the church, and 35 for lay professions, besides a fluctuating number of elementary pupils. The college is supported by the fees of the students, aided by an annual subscription of 2*l.* from each parish priest in the diocese.

*St. Patrick's College, Carlow,* for the education of persons professing the Roman Catholic religion, consists of a President, Vice-President, two Deans, and Professors of Theology, Sacred Scripture, Natural Philosophy, Moral Philosophy, and Humanity. Students for foreign missions are received at a pension of 10*l.* per annum. The college is empowered to issue certificates in Arts and Law, entitling the holders to be examined for degrees in the University of London.

*St. Kyran's College, Kilkenny,* for the education of Roman Catholic students, consists of a President, Vice-President, Prefect, and Professors of Theology, Philosophy, Sacred Scriptures, and Classics. It is also, like the preceding, in connexion with the University of London.

*The Catholic Missionary College of All Hallows, near Drumcondra, Dublin,* for the education of priests for the foreign missions, is governed by a community of clergymen, who gratuitously devote themselves to the religious and intellectual training of the inmates. It is situated in a retired demesne of 24 acres, and could accommodate 200 students; the number at present (1846) is only 70. There are Professorships of Sacred Scripture and Ecclesiastical History, Dogmatic Theology and Italian, Moral Theology, Logic, Metaphysics, and Ethics, Physics, Rhetoric and French, and Belles Lettres. Candidates for admission must be of good constitutions, not under 17 years of age, sufficiently instructed to enter the Rhetoric or Logic class, fully resolved to go on a foreign mission, and must pay 10*l.* annually. An annual contribution of the same amount entitles the donor to establish a free place for an additional student.

The *public classical schools*, which, in their constitution and courses of study, resemble in many respects the great grammar schools of

England, are those of royal foundation, diocesan schools, schools on the foundation of Erasmus Smith, and those founded by individuals. The royal schools were founded by Charles I., in the commencement of his reign; who endowed them with large tracts of land, chiefly in the northern counties. They are situated in the city of Armagh, and in the towns of Dungannon, Enniskillen, Raphoe, Cavan, Banagher, and Carysfort. The land granted for their support amounts to 13,588 acres, and produced in 1807, when their state was investigated by the commissioners of education, a revenue of 8,405*l.* a-year. The appointment of the teachers or head masters is vested in the lord-lieutenant, and each had formerly the management of the landed property attached to his school. But the management of the latter and the inspection and control of the teachers are now vested in a board of commissioners, who make annual reports to parliament. Still, however, these schools, though improved relatively to their former state, are far from filling the space in the general system of national instruction anticipated at their formation. The diocesan schools owe their origin to an Act of the 12th of Elizabeth, which requires a grammar-school to be founded in every diocese, and empowers the lord-lieutenant to fix the salary of the teacher: which is to be assessed on the bishop and the beneficed clergy of the diocese in the proportion of one-third to the former, and two-thirds to the latter. There were, in 1807, 32 schools in the different dioceses. The defects of their constitution led to a new arrangement, by which two or more dioceses were united for the maintenance of a district school; the numbers of which were fixed to be 5 in each of the provinces of Armagh and Cashel, and 4 in each of those of Dublin and Tuam, making a total of 18. This arrangement has, however, been but partially carried into effect: for, in 1834, of the 18 dioceses or districts in which schools are appointed to be kept, 8 only were provided with effective teachers, and at present, (1846,) 13. Erasmus Smith, one of the English adventurers who procured large grants of land in Ireland during the Interregnum, having bequeathed a large portion of them to pious and charitable uses, the trustees applied part of the income hence accruing to found grammar schools in Drogheda, Galway, Tipperary, and Ennis. The classical schools of private foundation are those of Navan, Ballyroan, Clonmel, Carrickmacross, Kilkenny, (which assumes the style of a college,) Middleton, the corporation school in Waterford, Dundalk, Lismore, Bandon, Kinsale, Castlebar, Charleville, Lifford, Cloghnakilty, and Rathfarnham. All these, though they vary in the mode of government and the details of management, are under the superintendence of the Board of Commissioners already noticed. But it may be observed, that though the admission of free scholars is considered to have been a main object with the founders, the number of this description of pupils is very small in comparison with the amount of income intended for their benefit, the total number in all the royal diocesan and other endowed schools being only 134.

The chief mercantile or English schools are those endowed by the trustees of Erasmus Smith's bequest, in the Coombe in Dublin, in Nenagh, Tipperary, Tarbert, and some other places; the Hibernian Nursery in the Phoenix Park, for the education of soldiers' orphans, which receives grant of public money; the Marine School on Sir John Rogerson's Quay, Dublin, for mariners' children; the Blue-coat Hos-

pital school in Oxmantown for the sons of decayed citizens of Dublin; Wilson's Hospital in Westmeath; Oldcastle, in Meath; Disrael's School, in Carlow; besides a number of others dispersed throughout various parts of the country.

The *education of the lower classes* has been long an object of parliamentary attention. So far back as 1537, an Act was passed requiring every incumbent of a parish to take an oath, on admission to his benefice, to teach an English school or to cause one to be taught. The provisions of this Act have been thought by many to be sufficiently complied with by the allowance of an annual stipend of 2*l.* to the parish clerk, or to some other individual who teaches or professes to teach a school; and, in many instances, notwithstanding the solemnity of the condition attached to it, it has been wholly inoperative. The general principle has latterly attracted the peculiar attention of the legislature; but the modes of management have been desultory and variable, and the results unsatisfactory. Grants of public money, to a very large amount, were given to two self-constituted associations. One of these, formed in 1811, under the name of the Kildare Place Society, and consisting of a number of respectable individuals chiefly resident in Dublin, received an annual grant which was gradually augmented to 25,000*l.* They embodied themselves on the express condition of affording literary information, without any interference with the religious opinions of the pupil. But, having subsequently required that the reading of the Bible should form an essential part of the school studies, and this innovation being resisted by the Roman Catholic hierarchy as contrary to the tenets of their church, which deems the assistance of the clergy necessary for the salutary perusal of the sacred volume, the operations of the society were impeded, and its usefulness as an organ of national education neutralised. The other association, the Society for the discountenancing of Vice, composed chiefly of clergymen of the Established church, also received an annual grant of between 5,000*l.* and 10,000*l.*; but as, in addition to the condition introduced into the Kildare Place Society, it required the introduction of the Protestant Liturgy, and other devotional treatises, it was deemed still more objectionable. Besides these grants, a sum of from 4,000*l.* to 5,000*l.* was entrusted to the lord-lieutenant to be disposed of at his discretion for the purposes of education. The general repugnance to the proceedings of these societies led to a total alteration of the system. The grants were withdrawn in 1831; and a single grant was vested in a Board of Commissioners for National Education, consisting of the Protestant and Catholic archbishops of Dublin, with sundry noblemen, clergymen, and gentlemen nominated by the Crown. They were formed into a corporation in 1845, and have power given them to hold lands to the value of 40,000*l.* a-year, to receive gifts and bequests, &c. The commissioners appear to have discharged their important duties with great zeal, and with the most exemplary impartiality. The schools they assist in establishing, though opposed by the bigots of both factions, appear to be making the most satisfactory progress; and will, no doubt, be productive of great public benefit. We subjoin an account of the progress of the National schools since their commencement in 1833:—

|  | Years. | Schools. | Pupils. | Parl. Grants. |
|--|--------|----------|---------|---------------|
|  | 1833   | 789      | 107,042 | 25,000        |
|  | 1834   | 1,106    | 145,521 | 35,000        |
|  | 1835   | 1,181    | 153,707 | 35,000        |
|  | 1836   | 1,300    | 166,929 | 35,000        |
|  | 1837   | 1,384    | 169,548 | 50,000        |
|  | 1838   | ..       | ..      | 50,000        |
|  | 1839   | 1,581    | 192,971 | 50,000        |
|  | 1840   | 1,978    | 232,560 | 50,000        |
|  | 1841   | 2,337    | 281,849 | 57,000        |
|  | 1842   | 2,721    | 319,792 | 55,000        |
|  | 1843   | 2,912    | 355,320 | 55,000        |
|  | 1844   | 3,153    | 395,550 | 75,000        |
|  | 1845   | 3,426    | 432,844 | 85,000        |

*Abstract Account of the number of Schools connected with the National System of Education in operation in the different Provinces of Ireland in 1845, showing the number of Children on the Rolls, the number of Teachers, &c.*

| Provinces.     | Number of Schools. | Number of Children on the Rolls, as returned by the Managers for the Half-years ending, |          |         |                       |          |         | Number of Teachers. |          |
|----------------|--------------------|-----------------------------------------------------------------------------------------|----------|---------|-----------------------|----------|---------|---------------------|----------|
|                |                    | 31st March, 1845.                                                                       |          |         | 30th September, 1845. |          |         |                     |          |
|                |                    | Males.                                                                                  | Females. | Total.  | Males.                | Females. | Total.  | Males.              | Females. |
| Ulster . . .   | 1,428              | 81,888                                                                                  | 84,251   | 186,148 | 81,040                | 80,084   | 141,174 | 1,308               | 325      |
| Munster . . .  | 723                | 37,005                                                                                  | 44,845   | 101,850 | 65,517                | 58,959   | 118,467 | 845                 | 308      |
| Leinster . . . | 853                | 37,757                                                                                  | 47,357   | 107,384 | 68,614                | 55,378   | 118,097 | 363                 | 406      |
| Connaught . .  | 404                | 28,739                                                                                  | 18,385   | 47,234  | 30,440                | 20,132   | 50,552  | 317                 | 137      |
| Total . . .    | 3,408              | 225,381                                                                                 | 197,083  | 392,556 | 236,671               | 189,409  | 426,080 | 2,635               | 1,164    |

A society for educating the children of the poor in connection with the Church of England, was founded in 1839. It is supported wholly by voluntary contributions; and had, in 1845, 1811 schools and 100,755 pupils.

The Sunday School Society, formed in 1809, for the moral and religious instruction of children unable to attend schools on week days, had in connection with it, in 1846, 2,962 schools, attended by 22,980 teachers and 244,503 pupils. It is maintained wholly by voluntary contributions.

The other principal seminaries of public foundation for the instruction of the lower classes, are the charter schools, founded in the beginning of the last century. Their chief object was the conversion of the Catholic population through the medium of religious and literary instruction. The chief means adopted was the abstracting of the children from their parents when very young, and rearing them in nurseries; whence they were drafted at a proper age into schools, where they were lodged, fed, clothed, and instructed in the elements of literature, and in the practical knowledge of the simpler processes of agricultural and manufacturing industry. In the transfer, or, as it was styled, "transplantation," care was taken to remove them as far as possible from their parents. When of sufficient maturity, they were apprenticed to protestant masters. The plan, though highly patronised and supported by large private donations and bequests, and by still larger grants of public money, proved a complete failure. The number of schools in the most flourishing periods was but thirty-nine, including four nurseries;

and not maintaining at any one time more than 1,600 children. Abuses of great enormity, notwithstanding the existence of a central board of control in Dublin, and of local boards in the neighbourhood of each school, were found to have crept in. Parliament, therefore, withdrew the grant, leaving the society to carry on its affairs out of its private income, which in 1808 amounted to upwards of 10,000*l.* annually. The number of elementary schools founded by charitable associations, or by donations and bequests of benevolent individuals, are too numerous to admit of a specification even of their names and localities.

The total number of pupils receiving instruction in public schools is stated by the Commissioners of Education to have been, in 1808, 45,590 Protestants, and 116,977 Catholics: total, 162,567. The number, stated in the returns of the enumerators employed in taking the census of Ireland in 1821, was 394,813; the distinction of religion was not noticed by them. In the returns of the Commissioners of Education, in 1824-6, the numbers are, Protestants, 142,168; Catholics, 408,285; those whose religious persuasion could not be ascertained, 10,096: total 560,549. According to a return of the Commissioners of Public Instruction, in 1835, the number of schools and scholars in Ireland, were as under:—

|                                                                                                            | Provinces.  |             |               |             | Total<br>in Ireland. |
|------------------------------------------------------------------------------------------------------------|-------------|-------------|---------------|-------------|----------------------|
|                                                                                                            | Armagh.     | Dublin.     | Caahel.       | Tuam.       |                      |
| Number of Daily Schools . . . . .                                                                          | 4,482       | 1,612       | 2,322         | 1,241       | 9,657                |
| Number of Daily Schools supported<br>wholly by Payments from the<br>Children . . . . .                     | 2,396       | 830         | 1,577         | 850         | 5,653                |
| Number of Daily Schools supported<br>wholly, or in part, by Endow-<br>ment or Subscription . . . . .       | 2,086       | 782         | 745           | 391         | 4,004                |

A notion has been long current in Great Britain that the Irish poor are exceedingly ignorant. But this is certainly not the case now, nor has it been so for a lengthened period. If elementary knowledge, or the being able to read, write, and perform ordinary arithmetical operations be regarded as education, it is more generally diffused in Ireland than in England. "Where, in England," asks Mr. Bicheno, "could the Ordnance Surveyors find persons among the *lowest class* to calculate the sides and areas of their triangles, at a halfpenny a triangle, as they do in Ireland, and abundance of them?"\* However they may apply it, the Irish are honourably distinguished by their desire to possess information, and by the efforts they have made to acquire it. But until within these few years their education was very defective; and the books that were used in schools were not unfrequently of the very worst description. We believe, however, that these have now nearly disappeared; and the school books published by the Kildare Street Society, and more recently by the Education Commissioners, seem to be not merely equal, but superior to most of those used in schools in Great Britain. The ignorance of the people has little to do with the peculiar state of Ireland: their want of industry and providence, their confidence in those who least deserve it, and the violence so frequently done to their sense of justice, are the grand sources of the poverty and disorders that have so long disgraced the country.

## CHAPTER II.—REVENUE AND EXPENDITURE.

### SECT. 1. *Revenue.*

IN early times the sovereigns of England, like those of most other feudal states, were the greatest landholders of the kingdom; their revenues consisting principally of the rents, services, &c., derived from their own lands, and partly of the fines, compositions, and other payments derived from the lands of others. But in the course of time the estates of the Crown were mostly alienated; and the diminution of the royal revenue thence arising being coincident with increased demands for the public service occasioned by the progress of society, and the consequently greater expense of government and defence, it became necessary to explore other sources of revenue. In early times it was usual for parliament to make grants of *tenths* and *fifteenths*; that is, to grant to the Crown a tenth or a fifteenth part of all the moveable property belonging to the subject. But there can be no doubt that they were but very imperfectly collected; and that the Crown never received anything like the real amount of these grants. The other ancient levies were of the nature of a land-tax; being called scutages, when laid on the tenants of knights' fees, hydages when laid on the occupiers of other lands, and talliages when laid on cities and boroughs. But these having gradually fallen into disuse, were followed by subsidies. The latter were not immediately imposed upon property, but upon persons in respect of their reputed estates, after the nominal rate of 4s. in the pound for lands, and 2s. 6d. for goods; and for those of

\* Mr. Bicheno's *Report on Poor Laws*, p. 41.

aliens in a double proportion. The existing land-tax grew out of the subsidy scheme; having originated in 1692, when a new assessment or valuation was made, by which a subsidy or land-tax of 1*s.* in the pound produced 500,000*l.* a-year of revenue. (See *Blackstone*, book i. cap. 8.)

But these resources were but limited, and comparatively inconsiderable; and were wholly inadequate to meet the vast expenditure of modern times. The sum withdrawn from the public by means of taxes, and appropriated to the use of government, amounts at present (1846) to about 57,500,000*l.* sterling, and far exceeds in magnitude the public revenue of any other country. But it must not thence be inferred that taxation is here comparatively heavy. Its pressure is not to be estimated by the actual amount of the sum taken from the people and lodged in the coffers of the treasury; but by the mode in which taxes are imposed, and the ability of the people to bear them. In some countries taxes are imposed on certain classes only; and even where this inequality does not exist, they are often imposed on erroneous principles, and in a way that makes their assessment and collection peculiarly difficult and injurious. But in the United Kingdom taxation presses equally, or nearly so, on all classes; and without pretending to say that our system of taxation is perfect, or that it might not be materially improved, it appears, speaking generally, to be founded on sound principles, and is practically as little injurious as it could well be rendered. And if we compare the magnitude of our taxes with that of the national revenue whence they are derived, it will probably be found that the complaints of the peculiarly heavy pressure of taxes in this country are, in a great measure, without foundation. It is not to the influence of taxation, but to the expensive style of living, which prevails amongst us, and which luckily (for it is the grand incentive to industry and invention) pervades all classes, that the difficulty many individuals have in preserving their places in society is to be ascribed. Instead of supposing that the influence of taxation in Great Britain has been hostile to the increase of public opulence and private comfort, we incline to think it has had a precisely opposite effect. To the desire of rising in the world, the increasing pressure of taxation during the late war superadded the fear of being thrown down to a lower station; and the two together produced results that we should in vain have looked for from the unassisted agency of either. Oppressive taxes would have had an opposite effect; and instead of producing new displays of industry and economy, would have produced only despair and national impoverishment. But it was seen that the increase of taxation might be met by increased exertion and economy; and this increased exertion has, in fact, led to the production of a far greater amount of wealth than was required to meet the increased demands of the revenue collectors.

About two-thirds of the public revenue are derived from duties of customs and excise; and the rest from the property and income tax, the duties on stamps, the assessed taxes, and the post-office. With few exceptions, the duties seem to be judiciously selected; and though it be true that some of them would be more productive were they materially reduced, the defect is not in the selection of the articles on which to

impose duties, but in the too great height to which they have been carried ; a defect that may be easily obviated.

*Customs.*—From a very distant period customs-duties have been charged on most articles imported into, or exported from, the country ; and though inconsiderable at first, they increased, with the increase of civilisation and commerce, till they long ago formed one of the most copious sources of the public revenue, and have now attained to an extraordinary magnitude. The king's claim to the customs-duties was established by stat. 3 Edward I. The various duties were collected, for the first time, in a book of rates, or tariff, published in the reign of Charles II. But there is hardly a year in which the customs-duties do not undergo considerable variations. It is now the practice to consolidate the different Acts imposing or varying the customs-duties before they become inconveniently numerous ; and tariffs, or tables of duties, drawbacks, &c., are annually published for the convenience of merchants and others. We have subjoined a statement of the existing duties on the most important articles.

Owing principally to the vast increase of the commerce, wealth, and population of the country, but partly, also, to the increase of the rates, the progress of the customs-duties has been quite extraordinary. The revenue derived from the customs-duties in 1596, in the reign of Elizabeth, amounted to no more than 50,000*l*. In 1613, it had increased to 148,075*l*., of which 109,572*l*. were collected in London. In 1660, at the Restoration, the customs produced 421,582*l*. ; and at the Revolution, in 1689, they produced 781,987*l*. During the reigns of William III. and Anne, the customs-revenues were considerably augmented, the nett payments into the Exchequer in 1712 being 1,315,422*l*. During the war terminated by the peace of Paris in 1763, the nett produce of the customs-revenue of Great Britain amounted to nearly 2,000,000*l*. In 1792, it amounted to 4,407,000*l*. In 1815, at the close of the war with revolutionary France, it amounted to 11,360,000*l*. ; and in 1845, it produced 21,706,197*l*., of which Great Britain furnished 19,377,358*l*., and Ireland 2,328,839*l*.

For a lengthened period customs-duties were charged indifferently on all sorts of commodities, whether exported or imported ; the duty on wool sent to the Netherlands, France, &c., being, during the middle ages, the principal item in the customs-revenue. But for a long time past they have been almost exclusively laid on imported articles ; those laid on exports being, in most instances, imposed rather to check or prevent the exportation of the articles, than in the view of raising revenue.

Were this the proper place for such investigations, it might be easily shown, that moderate customs-duties are about the least exceptionable of all taxes. They are collected with the greatest facility, involving no inquiry into the circumstances of individuals, as is the case with taxes on income or property ; nor any interference of any sort with the processes carried on in the arts, as is the case with certain excise duties. By allowing imported goods to be lodged in bonded warehouses under the joint locks of the king and the importer, the revenue is protected without its being necessary for the importer to pay the duties till the goods be withdrawn for consumption ; so that

but little additional capital is required to be at the command of the importing merchant, because of the articles in which he deals being subject to duties, and but little addition is, consequently, made to the price of the goods on account of the profits accruing to the dealers on the duties.

Customs-duties should not be carried to such a height as to give any overpowering stimulus to smuggling. They then contradict and defeat the very purpose for which they are intended. Our finance ministers have not, however, been sufficiently alive to this obvious consideration. There can be no articles better fitted to bear customs-duties than tobacco and spirits; but tobacco continues to be loaded with a most oppressive duty, and the duties which till this session (1846) were charged on foreign spirits, have been so very high, as to hold out an overpowering temptation to smuggling and adulteration. The duties on the latter have, however, been reduced from 22*s.* 5*d.* to 15*s.* per gallon; and it is probable that those on tobacco will be reduced at no very distant period. At present, however, the duties on tea are by far the most objectionable in our tariff; and their effectual reduction would do more, perhaps, than any other fiscal measure that could be adopted, to add to the comforts of the bulk of the community; at the same time that it would powerfully contribute to extend our intercourse with China.

As already stated, the nett customs-revenue of 1845 amounted to 21,706,197*l.*; and, notwithstanding the defects to which we have adverted, we will venture to affirm, that no equal amount of revenue was ever raised in any country, or in any period of time, with so little difficulty and inconvenience. The assessed taxes, exclusive of the land-tax, produced, in 1845, 3,280,434*l.*; and no one familiar with the facts can doubt that their payment produced more irritation, and was regarded as a greater burden by the public, than the payment of the customs-duties, though the latter brought between six and seven times as great an amount of revenue into the coffers of the Treasury.

The customs-revenue of 1845, was collected in Great Britain at a charge of 5*l.* 7*s.* 9½*d.* per cent. upon its gross produce; and in Ireland at a charge of 9*l.* 8*s.* 3½*d.* on ditto.

*Excise Duties.*—The next great branch of the public revenue consists of inland, or excise duties, that is, of duties charged on certain commodities produced or manufactured at home.

Excise duties were introduced into England by the Long Parliament in 1643; being then laid on the makers and venders of ale, beer, cyder, and perry. The royalists soon after followed the example of the republicans; both sides declaring that the excise should be continued no longer than the termination of the war. But it was found too productive a source of revenue to be again relinquished; and when the nation had been accustomed to it for a few years, parliament declared, in 1649, that the impost of excise was the most easy and indifferent levy that could be laid upon the people. It was placed on a new footing at the Restoration; and notwithstanding Mr. Justice Blackstone says, that "from its first original to the present time, its very name has been odious to the people of England" (*Com.* book i. c. 8.),

it has continued progressively to gain ground ; and it is at this moment imposed on several most important articles, and furnishes nearly a third part of the entire public revenue of the kingdom.

The prejudice in the public mind to which Blackstone has alluded, against the excise duties, seems to depend more on the regulations connected with their imposition, than on the extent to which they have sometimes been carried. The facilities of smuggling, and the frauds that might be committed upon the revenue, unless a strict watch were kept, have led to the enactment of several rather severe regulations. The officers have been empowered to enter and search the houses of such individuals as deal in excisable commodities at any time of the day, and in most instances, also, of the night. And the proceedings in cases of transgression are of such a nature, that persons may be convicted in heavy penalties, by the summary judgment of two Commissioners of Excise, or of two justices of the peace, without the intervention of a jury.

For the more easily levying the revenue of excise, England and Wales are divided into numerous collections, some of which are called by the names of particular counties, others by the names of great towns ; where one county is divided into several collections, or where a collection comprises the contiguous parts of several counties, every such collection is subdivided into several districts, within which there is a supervisor ; and each district is again subdivided into out-rides and foot-walks, within each of which there is a gauger or surveying officer.

Some excise duties, that were justly objected to, especially that on glass, which interfered injuriously with the manufacture, have been repealed ; and we are not sure that there is one of the existing duties that can be fairly objected to on principle, though the rate of duty might, perhaps, in some instances, be advantageously reduced.

It has been said that the excise duties "greatly raise the cost of subsistence to the labouring classes." But this assertion has really no foundation. In 1845, the excise duties in Great Britain produced 13,044,829*l.* nett. Now, of this sum, the duties on spirits, malt, and licenses, produced 10,208,857*l.* ! In fact, the only excise duty that can be said to fall on a necessary of life, is that on soap, which produced in 1845 (in Great Britain, for it does not extend to Ireland) 963,506*l.* ; and as the population of Great Britain amounts at present (June, 1846), to above 20,000,000, the soap tax cannot, at an average, impose a burden of 1*s.* a-year on each individual. If we estimate its annual pressure on a labouring family of five persons at 4*s.* 6*d.*, we shall not be within, but beyond, the mark.

The only taxes in the various departments of the revenue, that can be truly said to fall on articles necessary to the labourer, are, besides soap, those on sugar, tea, and a few others. The duties on sugar have recently been effectually reduced, and placed on a proper footing ; and the duty on tea might be reduced a half with but little, if any, loss to the revenue.

Even though they were not required by the public exigencies, the duties on spirits obstruct a pernicious habit, and should not be given up. They are the best of all possible duties ; and the only thing to be

attended to in their imposition, is not to carry them to such a height as to defeat their operation by encouraging smuggling. We have yet to learn, supposing they are not carried beyond this limit, that a single good objection can be made to these duties.

The obscurity and complexity of the excise laws were long and justly complained of. Much, however, has been done to simplify them within the last few years; and nothing should be omitted that may serve to render them brief, clear, and level to the comprehension of every one; and that may hinder them, in as far as practicable, from interfering with the details and processes of manufacture. In this respect, indeed, there is now but little to desire; and the duties seem to be assessed with as much regard to the convenience of the public as the circumstances will admit.

The capacity of a tax on a commodity to raise a revenue, depends partly on the nature and extent of the demand for the taxed article; and partly on the means of preventing its being smuggled or the duty evaded. Every tax, by raising the price of the article on which it is laid, has a tendency to bring it within the command of a smaller number of purchasers, and to lessen its consumption. An individual who might be able and disposed to pay 1s. a bottle of duty on wine, might neither have the means nor the inclination to pay 2s. or 3s.; and, instead of being augmented, the revenue might be diminished by such an increase of duty. And hence, whenever the duties on commodities are raised beyond certain limits, which, however, it is impossible to define *à priori*, seeing that they necessarily vary according to the description of commodities on which duties are laid, the varying tastes and circumstances of society, and the means of counteracting smuggling,—they depress consumption to such an extent, as to become less productive than if they had been lower.

Variations in the amount of the duties affecting commodities have exactly the same effect on their price, and consequently on their consumption, as corresponding variations in the cost of their production. But it is clear that any reduction in the price of articles, the necessary cost of which is very considerable, and can, therefore, be used only by the rich, would not so powerfully increase their consumption, as an equal reduction in the price of cheaply produced commodities in general demand. Thus, a reduction of 25 or even 50 per cent. in the price of coaches would not add greatly to the demand for them; for, notwithstanding this reduction, they would still be luxuries, for which none but the rich could afford to pay. But a reduction of 25 or 50 per cent. in the price of tea, sugar, beer, gin, or any article in general demand, would extend its consumption in a much greater ratio. The reason is, that the lower classes form by far the most numerous portion of society; and that the articles referred to, and others of the same description, are highly esteemed by them; being, even at their present prices, extensively consumed. But a reduction of a half, or even a fourth, from their price, would add prodigiously to the demand for them. It would enable their present consumers to use them in larger quantities; while it would, at the same time, bring many of them fully under the command of a large class by whom they are now used as luxuries only on rare occasions. The history of

taxation in this and other countries fully confirms this statement. When carried beyond due limits, taxes on commodities cease to be productive; and recover that quality when they are reduced. There is much truth in the shrewd remark of Dr. Swift, that, in the arithmetic of the customs, two and two do not always make four, but, sometimes, only one. In 1808, the duty on coffee was 1*s.* 7½*d.* per lb., the quantity entered for consumption that year being 1,069,691 lbs., producing a nett revenue of 161,246*l.* In the course of the year the duty was reduced to 7*d.* per lb.; and next year no fewer than 9,251,837 lbs. were entered for home consumption, producing a nett revenue of 245,886*l.* The coffee duty has since been lowered to 4*d.*; and the quantity entered for consumption is now about 34,000,000 lbs., and the revenue about *four times* as great as before the reduction! The history of the duties on tea, spirits, wine, sugar, and indeed of every other article in extensive demand, is precisely similar. When carried to an oppressive height, the duty either makes the use of the article be given up, or, which is the most common case, it makes it be supplied through clandestine channels in defiance of the law. But when the duty is moderate, the taste for the article is diffused; and the profits to be made by trampling on the law not being sufficient to remunerate the smuggler, he is forced to abandon his hazardous occupation, and the article is wholly supplied through legitimate channels. After the various disastrous consequences entailed on the country by the exorbitant height to which many duties were carried previously to 1825, and the signal advantages that have resulted to the revenue and the public from their subsequent modification, it may be hoped that the principle now stated will meet with more attention in future.

The attempts that have been made in Great Britain and elsewhere to suppress smuggling, and at the same time to maintain exorbitant duties, have all signally failed. It has been invariably found, that no severity of the law, nor vigilance on the part of the officers, can prevent the smuggling of commodities loaded with excessive duties. Down to a very recent period it was supposed that from 500,000 to 600,000 gallons of foreign brandy and Geneva found their way into our market without paying any duty, in defiance of the coast guard, and of all the other machinery for keeping them out. Large quantities of silk goods and of tobacco are also smuggled. In fact, there are no means of effectually putting down smuggling other than a reduction of duty. The very severity of the laws prevents their execution. It creates a sympathy in favour of the smuggler; it stimulates the trader to corrupt the officer to conceal a fraud; and it makes the officer overlook what he might otherwise discover.

The Excise revenue of 1845 was collected in Great Britain at a charge of 5*l.* 15*s.* 1*d.* upon its gross produce; and in Ireland at a charge of 10*l.* 13*s.* 0½*d.* on ditto.

*Stamp Duties.*—These duties form the next most important branch of the public revenue after the customs and excise. They are mostly laid on the parchment or paper on which certain deeds, contracts, receipts, acquittances, bills of exchange, newspapers, policies of insurance, indentures of apprenticeship, &c., are written or printed; and derive their name from the parchment or paper being impressed with

a stamp, stating the amount of the duty. When imposed on fair principles, and not carried to too great a height, stamp duties seem to be one of the most legitimate sources of revenue. They assist, or may be made to assist, in authenticating legal instruments, and render it much more difficult than formerly to forge deeds of any standing. It is needless, perhaps, to say, that if stamp duties be carried to such a height as to oppose any serious obstacle to the free circulation of property, or to the execution of necessary deeds, they become exceedingly injurious. Perhaps the duty on fire insurance is the most objectionable of the existing stamp duties. It amounts to 3*s.* per cent. on all property insured; whereas the premium paid to the insurance office, on ordinarily hazardous property, is no more than 1*s.* 6*d.* per cent., or *only half the duty*. Thus, if a person wish to insure 1000*l.* on a dwelling-house, a shop, warehouse, or other commonly hazardous property, he pays 15*s.* to an insurance office as an indemnification for the risk, and 30*s.* to Government for leave to enter into the transaction! So exorbitant a duty cannot be too severely condemned. It discourages that providence and foresight, the encouragement of which ought to be an object with all prudent governments; and it is the principal cause that much property is not insured, and that what is insured is seldom sufficiently covered. Every individual, in fact, who insures any commonly hazardous property, is obliged to *pay three times as much as the risk is really worth!* Under such circumstances, the wonder certainly is not that a great deal of property is uninsured, but that such is not the case with a great deal more. Seeing the vast importance of insurance, it may well be doubted whether it ought to be charged with any duty, however slight. But were the duty fixed at 6*d.* per cent., or at a third part of the premium, its influence in repressing insurance would not be very sensible. And the increase of business to which such a reduction of the duty would lead would be so very great, that we have little doubt that in a few years the reduced duty would yield nearly as large a revenue as is derived from the present exorbitant duty.

The duties on legacies, and on the probates of wills, are included under the head of stamp duties, of which they are very important items. These duties affect only personal or moveable property, though there is no good reason why they should not affect all sorts of property. The legacy duty varies according to the propinquity of the successor; being 1 per cent. on property devolving on children and lineal heirs; 3 per cent. on property devolving on brothers and sisters; 4 per cent. on property devolving on cousins; and 10 per cent. on property devolving on strangers. The probate duty varies according to the amount of property in the will. These duties have the serious defect (which might, however, be easily obviated) of pressing with greater proportional severity on small than on large sums. The duties on stage and hackney coaches, gold and silver plate, &c., come under the head of stamps.

The principal objection to taxes on successions, or on the transfer of property from the dead to the living, consists in the circumstance of their falling wholly on capital, without occasioning any effort to replace their amount by increased exertion or economy. If a legacy

of 1000*l.* be subject to a tax of 10 per cent., or 100*l.*, the legatee considers his legacy as only 900*l.*, and feels no particular inclination to save the 100*l.*; whereas, had he received the whole 1000*l.*, and been required to pay 100*l.* in taxes on income or commodities, the desire to preserve his capital unimpaired, would have prompted him to endeavour to defray the tax by increased industry or economy, or both. On the other hand, however, the taxes in question are easily collected, and seldom give any disturbance to the existing distribution of capital, as is invariably almost the case with taxes on income or expenditure. Provided, therefore, they be not carried to an excess, or be imposed on an unjust principle, the legacy and probate duties do not seem very objectionable.

Stamp duties were introduced into England in 1671, by a statute entitled "An Act for laying Impositions on Proceedings at Law." The duties were at first granted for only nine years, and were afterwards continued for three years more, when they were allowed to expire. They were again revived in 1693, and have since been gradually and greatly increased. The stamp duties are collected at the moderate charge of about 2 per cent. on the gross amount.

*Taxes on Property and Income.*—We are inclined to think that the existing tax on property and income is the most objectionable, in respect of principle, of any of the taxes to which the country is at present (1846) subjected. Though theoretically equal, a tax either on income or property, or both, is practically most unequal. We may get a pretty accurate notion of the income derived from land, houses, funded property, and mortgages; but all beyond this is mere guess-work. There are no means by which to ascertain the amount of farming capital, stock in trade, the profits derived from them, or the incomes of professional men. No inquisition into the affairs of private individuals can ever discover these particulars. There is nothing, in fact, to depend upon in such cases but the declarations of the parties; and we need not dwell on the impolicy of any system of finance that sets the duty and the interests of the contributors in opposition, and makes them profit by concealing or perverting the truth. Besides, although these preliminary and insuperable difficulties were overcome, and we had learned the capital and incomes of different parties, we should have other and greater difficulties to surmount before the tax could be fairly assessed. The same deduction should not be made from all incomes without taking into account the sources whence they are derived. To assess them on a just principle, the present value of different incomes, or their value supposing them to be reduced to a perpetuity, should be determined. But it may be unhesitatingly affirmed that to do this on a large scale would be quite impracticable, and therefore, speaking generally, taxes on income or on property should not be introduced, except under very peculiar circumstances, and should, if possible, be reserved for a *dernier ressort*, for a means of filling the coffers of the Treasury, when the other and more legitimate sources of revenue may be insufficient, or when money must be had at all hazards.

Much, no doubt, of the influence of a tax on property or income depends on the extent to which it may be carried. Those who might

be tempted to conceal and underrate their incomes, did the tax amount to 10 or 12 per cent., might willingly disclose them were it only 2½ or 5 per cent., and the influence of the tax in forcing capital abroad depends also, in a great degree, on its amount. But how low soever the rate of duty, a great many individuals will always endeavour to evade or elude its pressure; and there is really no method by which to defeat their machinations, except by making them attest the returns of their incomes by oath. This, however, is a very bad species of guarantee, inasmuch as it is respected only by men of integrity, who do not require to be called upon to vouch for the truth of their returns, and is all but wholly disregarded by others. Hence it is that a tax on income or property really operates as a bounty on perjury and fraud, and were it carried to any considerable height, or to 10, 12, or 15 per cent., it would undoubtedly generate the most barefaced prostitution of principle, and would do much to sap that nice sense of honour which is the only sure foundation of national probity and virtue.

But notwithstanding its many and great defects, a moderate income-tax may be occasionally expedient even in time of peace; and this was, perhaps, the case with the existing income-tax. When it was imposed, in 1842, the finances were in a state of the greatest disorder, the revenue being about 2,700,000*l.* a-year short of the expenditure. This deficit had been occasioned partly by the falling off in the post office revenue, consequent on the introduction of the penny postage, and partly and principally by the ill-advised sacrifice of the house-tax, which had produced a revenue of about 1,300,000*l.* a-year. Under these circumstances, Sir Robert Peel had to consider how he might best provide for the deficiency in the public revenue, and how he might, also, realize a surplus to enable him to make those important changes in the excise and customs' duties which he had in contemplation. And as the re-establishment of the house tax would have been a very unpopular, and perhaps even an impracticable measure, he decided upon imposing a tax of 7*d.* in the pound (2*l.* 18*s.* 4*d.* per cent.) on all incomes of above 150*l.* a-year; and by this means repaired the deficiency in the revenue, and produced a fund which enabled him to repeal the duties on glass, cotton, sheeps' wool, &c., and to effect other important reforms.

But though, taking the circumstances into account, the imposition of the existing income-tax was probably the best plan that could have been adopted, it certainly is a tax that should not be retained a moment after it can be dispensed with. It is indebted for its easy working solely to its moderation, and especially to the exemption in favour of incomes under 150*l.* But this exemption is founded on a very questionable and easily-abused principle, and any attempt to increase the tax, to carry it up to 7½ or 10 per cent., would so aggravate its pressure and disclose its bad qualities that it is doubtful whether it would be submitted to. The notion that it is possible really to improve the condition of the bulk of the people by repealing the excise and customs' duties that fall on articles of general consumption, and replacing them by a proportionally increased income-tax, is contradictory and absurd. To show its operation, suppose that the attempt is made, and observe what the result would be: a manufacturer employs a certain
